Two new charge metrics are added for IBM® Informix® Dynamic Server (IDS) and IBM Informix Warehouse:

1. Limited Use Socket charge metric for the Workgroup Edition of IDS V11.50xC4, Informix Warehouse V11.50xC4, and Informix Warehouse Feature V11.50xC4
2. Limited Use Virtual Server charge metric for the IDS V11.50xC4 Express Edition

To order, contact your IBM representative, an IBM Business Partner, or the Americas Call Centers at: 800-IBM-CALL.

Informix Dynamic Server (IDS)	VE001

Overview

As an IBM Informix customer, you now have more pricing options that will help you meet your business needs and reduce your costs. Two new charge metrics are now available for purchase.

- The Limited Use Socket (LU Socket) charge metric is available for the Workgroup Edition of Informix Dynamic Server (IDS) V11.50xC4, Informix Warehouse V11.50xC4, and Informix Warehouse Feature V11.50xC4. If you intend to utilize many cores in a multicore socket, the LU Socket charge metric could help to significantly reduce the cost of running your solutions on the Workgroup Edition of these offerings.
- The Limited Use Virtual Server (LUV Server) charge metric is available for the Express Edition of IDS V11.50xC4. This new charge metric can help reduce the complexity of acquiring an entry level data server and offers integrated solutions to small size businesses. You may deploy the IDS Express Edition under this LUV Server charge metric on a Limited Use Virtual Server, which is a physical server or a virtual server created by partitioning the resources available to a physical server. Refer to the charge metrics definitions section for more details about the license metric and resource and use restrictions.

For details and technical information about Informix Warehouse offerings, refer to Software Announcement [209-142](#), dated April 28, 2009.

For details and technical information about IDS, refer to Software Announcement [209-043](#), dated February 10, 2009.

Key prerequisites

For the key prerequisites for Informix Warehouse offerings, refer to hardware and software requirements sections in Software Announcements [209-142](#), dated April 28, 2009 and Software Announcement [209-041](#), dated March 03, 2009.

For the key prerequisites for IDS, refer to hardware and software requirements sections in Software Announcement [209-043](#), dated February 10, 2009 and Software Announcement [208-093](#), dated May 06, 2008.

Planned availability dates

May 28, 2009: Electronic software delivery

June 9, 2009: Media and documentation

Description

Two new charge metrics are added to the Informix Dynamic Server (IDS) and Informix Warehouse offerings to provide you with more pricing options to help meet the business needs and manage or save on costs.

For new licenses of IDS V11.50xC4, you have a choice of three editions:

1. Enterprise Edition with three charge metrics: Authorized User, Concurrent Session, and Processor Value Unit
2. Workgroup Edition with four charge metrics: Authorized User, Concurrent Session, Processor Value Unit, and the new Limited Use Socket (LU Socket)
3. Express Edition with three charge metrics: Authorized User, Processor Value Unit, and the new Limited Use Virtual Server (LUV Server)

For Informix Warehouse V11.50xC4 and Informix Warehouse Feature V11.50xC4, you have a choice of two editions for purchase:

1. Enterprise Edition with three charge metrics: Authorized User, Concurrent Session, and Processor Value Unit
2. Workgroup Edition with four charge metrics: Authorized User, Concurrent Session, Processor Value Unit, and the new Limited Use Socket (LU Socket)

The LU Socket charge metric establishes a single entitlement charge for each limited use socket. This could result in significant savings if you intend to utilize many processor cores. The LU Socket charge metric is available only for the Workgroup Edition offerings specified above. You may purchase LU Socket license entitlements only on a physical server with up to four sockets. Each program instance licensed on the LU Socket charge metric basis may only use up to 16 GB of allocated SHMTOTAL memory and may only utilize a total of 16 processor cores. Refer to the charge metric definition section for more details about the license metric, and resource and use restrictions.

If you only need to utilize a few processor cores, the Processor Value Unit charge metric, where you may purchase only the cores they need, could be an attractive cost saving alternative to the LU Socket charge metric.

The LUV Server charge metric offers a single charge for using IDS V11.50xC4 Express Edition on a server (physical or virtual), running the specified operating systems within specified limits. It could reduce the complexity of purchasing an entry-level data server and offers integrated solutions for small size businesses.

Each LUV Server entitlement covers one or more instances of IDS Express Edition deployable on any machine that meets the specified resource restrictions, but each such instance of the program must share the same limited resources. In a virtualized environment, multiple LUV Server entitlements may be purchased to deploy instances of IDS Express Edition on virtual domains, LPARs, containers, or zones. Each LUV Server entitlement allows the program to utilize only up to the aggregate maximum of four processor cores and 4 GB of allocated SHMTOTAL memory. No instance of IDS Express Edition may have access to resources in excess of these limits. IDS Express Edition is available on Linux® and Windows® operating systems and supported on x86 or x86-64 hardware platforms. Refer to the charge metrics definitions for more details about the license metrics and use and resource restrictions.

Accessibility by people with disabilities

A US Section 508 Voluntary Product Accessibility Template (VPAT) can be requested via the IBM Web site

http://www.ibm.com/able/product_accessibility/index.html

Section 508 of the U.S. Rehabilitation Act

The products in this announcement are capable when used in accordance with IBM's associated documentation, of satisfying the applicable requirements of Section 508 of the Rehabilitation Act, provided that any assistive technology used with the product properly interoperates with it. A U.S. Section 508 Voluntary Product Accessibility Template (VPAT), containing details on the products accessibility compliance, can be requested on the following Web site

http://www.ibm.com/able/product_accessibility/index.html

No hard copy publications are shipped with these products.

The IBM Publications Center

<http://www.ibm.com/shop/publications/order>

The Publications Center is a worldwide central repository for IBM product publications and marketing material with a catalog of 70,000 items. Extensive search facilities are provided. Payment options for orders are via credit card (in the U.S.) or customer number for 20 countries. A large number of publications are available online in various file formats, and they can all be downloaded by all countries.

Software Services

IBM Software Services has the breadth, depth, and reach to manage your services needs. You can leverage the deep technical skills of our lab-based, software services team and the business consulting, project management, and infrastructure expertise of our IBM Global Services team. Also, we extend our IBM Software Services reach through IBM Business Partners to provide an extensive portfolio of capabilities. Together, we provide the global reach, intellectual capital, industry insight, and technology leadership to support a wide range of critical business needs.

To learn more about IBM Software Services or to contact a Software Services sales specialist, visit

Charge metrics definitions

Processor Value Unit (PVU)

PVU is a unit of measure by which the program can be licensed. PVU entitlements are based on processor technology (defined within the PVU table* by processor vendor, brand, type and model number). IBM defines a processor, for purposes of PVU-based licensing, to be each processor core on a chip. Each software product has a unique price per PVU. To determine the total cost of deploying an individual software product in a specific hardware environment, you must take the following steps:

1. For each processor core in the hardware environment on which the software product is to be licensed, determine the PVU requirement based on its processor technology per the PVU table*.
2. Add the PVU requirements for all processor cores in the hardware environment.
3. Multiply the software product's price per PVU by the total number of PVUs required as determined in step 2 above.

PVU entitlements are specific to the program and may not be exchanged, interchanged, or aggregated with PVU entitlements of another software product.

Unless the program and your environment are each eligible for sub-capacity licensing according to the IBM International Passport Advantage Agreement Attachment for Sub-Capacity Licensing Terms (the "Attachment")**, you must obtain PVU Proofs of Entitlement (PoEs) for the maximum number of activated*** physical processor cores in the hardware environment made available to or managed by the program. This is also referred to as full capacity licensing.

*PVU licensing is subject to additional details and terms, including the latest PVU requirements table, described at

http://www.ibm.com/software/lotus/passportadvantage/pvu_licensing_for_customers.html

**Passport Advantage sub-capacity licensing terms, conditions and eligibility requirements are described at

<http://www-01.ibm.com/software/lotus/passportadvantage/subcaplicensing.html>

***Activated processor cores are physical processor cores that are available for use in a server.

They include processor cores:

1. That are activated (available for use) when the server is shipped by the manufacturer, and
2. That are activated subsequently through activation codes purchased from the server manufacturer by the customer.

In each case regardless of whether the capacity of the processor cores can be or is limited by the customer through virtualization technologies, operating system commands or BIOS settings.

PVU sub-capacity

This program is eligible for sub-capacity licensing. In order to take advantage of sub-capacity licensing, your virtualization environment must meet the eligibility requirements described in the IBM International Passport Advantage Agreement Attachment for Sub-Capacity Licensing Terms (the "Attachment"), and you must accept the terms of the Attachment. You must obtain PVU PoEs for the maximum processor core capacity available to the program when deployed in an eligible virtualization environment. This is also referred to as sub-capacity or virtualization capacity licensing.

You must use the IBM License Metric Tool unless they meet the exceptions described in the Attachment.

Additional details regarding Passport Advantage sub-capacity licensing terms, conditions, and eligibility requirements, including the Attachment and IBM License Metric Tool ordering information, are described at

<http://www.ibm.com/software/lotus/passportadvantage/subcaplicensing.html>

Authorized User

You must acquire a separate Authorized User license entitlement for each Authorized User of the program installed on each individual server.

An Authorized User is one and only one individual with a specific identity within or outside your enterprise. A PoE is required for each Authorized User accessing the program or any program component on a single server either directly or indirectly through any means. An example of indirect access would be through a multiplexing program, client device, or application server. For a single Authorized User to access the program on more than one server, additional PoEs must be acquired and each PoE must be based on the charge metric associated with the program being accessed.

The program can be accessed by multiple Authorized Users provided that an Authorized User license entitlement has been obtained for each individual. An Authorized User's ID is unique to the uniquely identified individual and cannot be shared with or used by others or transferred. A single Authorized User ID, however, is entitled to establish one or more connections to the program (but only on a single server for each entitlement), each for use solely by the identified Authorized User, and only the single Authorized User entitlement is required. If an Authorized User makes connections to other IDS data servers (or to this program residing on a separate server), additional PoEs must be acquired for those connections using the charge metric for those other IDS data servers or for the other program.

Each separate individual that uses a connection, directly or indirectly, made to this program through the intranet (connections from within your enterprise) or through the Internet (connection from outside your enterprise) must be counted as

a separate Authorized User and a separate entitlement must be acquired for such Authorized User.

The following minimum Authorized User requirement applies to licenses to the Informix Warehouse Enterprise Edition V11.50 and Informix Warehouse Feature for Enterprise Edition V11.50. The program must be licensed for, and PoE acquired for, the greater of (a) at least 10 Authorized Users per server on which the program is installed or (b) the total number of Authorized Users accessing the program.

The following minimum Authorized User requirement applies to licenses to the Informix Warehouse Workgroup Edition V11.50 and Informix Warehouse Feature for Workgroup Edition V11.50. The program must be licensed for, and PoE acquired for, the greater of (a) at least 10 Authorized Users per server on which you install the program or (b) the total number of Authorized Users accessing the program.

Concurrent Session

A Concurrent Session is a) a logical connection made between the program (residing on a single server) and a client device and b) except as indicated below, each logical connection made between an instance of the Administration Console component of a program and an IDS instance of a program or any separately acquired IDS V11.50 program. Each such connection is counted as a Concurrent Session whether or not it is actually in use and regardless of the duration of the connection or periods of activity. If an individual end user establishes multiple connections, each one is counted as a separate Concurrent Session, even if they share a common physical pathway. From the day you began using the program, the highest number of connections ever established at any time for each copy (for example, instance) of the program on each server will be counted for purposes of determining the total Concurrent Session entitlements required. You must acquire entitlements for the greatest number of logical connections ever established at any time for all program instances on each server, including (except as indicated below) each logical connection made between an instance of the Administration Console component of a program and an IDS instance of a program or any separately acquired IDS V11.50 program. Refer to the example below.

The Informix Warehouse Feature includes the Informix Warehouse Administration Console components. The following applies to the Informix Warehouse Feature for Workgroup and Enterprise Editions.

When a SQL Warehouse run request is issued from an instance of the Administration Console, it may create a number of parallel logical connections to an instance of IDS. While each original connection between an Administration Console instance and an IDS instance is counted as a Concurrent Session for which a PoE entitlement must be acquired, additional parallel connections created in conjunction with such SQL Warehouse run requests are not counted as Concurrent Sessions, and no additional PoE entitlements are needed for them.

Each logical connection made between a client device and a copy of the program residing on a server is counted as a Concurrent Session for which an entitlement is required. For example, if copies of the program reside on two different servers and a single client device is connected to the program on both servers, then 2 Concurrent Sessions have been established and a PoE must be acquired for each of them. As a further example, if four copies of the program reside on two different servers and a single client device is connected to each of the four instances of the program, then four Concurrent Sessions have been established and a PoE must be acquired for each of them. As a further example, if 4 copies of the IDS component of a program reside on 2 different servers and a single client device is connected to each of the 4 instances of the IDS component, and 2 Administration Console instances (1 on each server) are connected to each of 4 instances of the IDS component, then 12 Concurrent Sessions (4 total from the client device and 8 total from the Administration Console) have been established and a PoE must be acquired for each of them.

Each logical connection from a client device made, directly or indirectly, to this program (residing on a single server), through the Intranet (connections from within your enterprise) or through the Internet (connections from outside your enterprise)

is counted as a separate Concurrent Session and a separate entitlement (PoE) must be acquired for such Concurrent Session.

A PoE is required for each Concurrent Session established to access the program or any program component either directly or indirectly through any means. An example of indirect access would be through a multiplexing program, client device, or application server. The number of connections is not reduced by any program, client device, or machine, such as a front-end server, application server, or multiplexer, which may be used to connect, manage, and/or concentrate the logical connections.

For example, if you install one or more copies (for example, instances) of the program on each of 3 servers and from the day you begin using the program, the greatest number of Concurrent Sessions ever established on the total program instances (including applicable Administration Console instance to IDS instance connections as specified above) on server 1 was 12, on server 2 was 70, and on server 3 was 89, then you must acquire, and pay for, PoE entitlements for 171 Concurrent Sessions, even if the number of your logical connections decreases over time (for example, logical connections are reduced to the following: Server 1: 12; Server 2: 56; Server 3: 80). Of course, you may subsequently again increase your total number of logical connections to 171 without needing to acquire additional Concurrent Session entitlements, provided that you do not increase the total number of logical connections, including logical connections made between an instance of the Administration Console component of a program and an IDS instance of a program or any separately acquired IDS V11.50 program on any one of the servers beyond the highest number of applicable logical connections ever previously established on that server. In this example, you could again increase the logical connections on server 2 up to 70, and could increase the logical connections on server 3 up to 89, without needing to acquire additional Concurrent Session entitlements. To be clear, if you did increase the total number of logical connections on server 2 up to 70, you could change the combination of such logical connections that were originally acquired without needing to acquire additional entitlements (for example, if you originally had entitlements for 50 connections between client devices and the program and 20 Administration Console instance connections to IDS instances, then you could instead implement 60 connections between client devices and the program and 10 Administration Console instance connections to IDS instances). However, if you increased the number of logical connections on server 1 to 25, even though the number of logical connections on servers 2 and 3 remained at 56 and 80, respectively, you would need to acquire an additional 13 Concurrent Session entitlements for server 1 (bringing your total entitlements to 184). Concurrent Sessions are not equivalent to concurrent users.

Each batch process being executed at the same time is also considered to be a Concurrent Session. You must acquire a separate Concurrent Session license entitlement for each Concurrent Session as described above.

Each logical connection from a client device made, directly or indirectly, to this program (residing on a single server), through the intranet (connections from within your enterprise) or through the internet (connections from outside your enterprise) is counted as a separate Concurrent Session and a separate entitlement (PoE) must be acquired for such Concurrent Session.

The following minimum Concurrent Sessions requirement applies to licenses to the Informix Warehouse Enterprise Edition V11.50 and Informix Warehouse Feature for Enterprise Edition V11.5:

- The program must be licensed for, and PoE acquired for, the greater of (a) at least 10 Concurrent Sessions per server on which the program is installed or (b) the total number of Concurrent Sessions accessing the program.

The following minimum Concurrent Sessions requirement applies to licenses to the Informix Warehouse Workgroup Edition V11.50 and Informix Warehouse Feature for Workgroup Edition V11.50:

- The program must be licensed for, and PoE acquired for, the greater of (a) at least 10 Concurrent Sessions per server on which you install the program; or, (b) the total number of Concurrent Sessions accessing the program.

Limited Use Socket Licensing (LU Socket)

This program is licensed on a LU Socket basis as follows. You must (1) acquire one LU Socket entitlement for each socket on the server on which the program is installed, and (2) comply with the resource use restrictions further defined below in this License Information. A server is a single physical computer that executes requested procedures, commands, or applications to one or more user or client devices. Where blade technology is employed, each blade is considered a separate server. A socket is electronic circuitry that accepts a processor chip. A processor chip is electronic circuitry containing one or more processor cores that plugs into a socket. A processor core is a functional unit within a computing device that interprets and executes program instructions, and consists of at least an instruction control unit and one or more arithmetic or logic units.

This program is eligible for sub-capacity licensing, and you may be permitted to license less than all sockets on the server. Sub-capacity licensing terms, conditions, and eligibility requirements for LU Socket-charged products are described at

<ftp://ftp.software.ibm.com/software/smb/pdfs/LicensingGuide.pdf>

If your use of the program is not eligible for sub-capacity licensing based on these terms and conditions, you must acquire LU Socket entitlements for all sockets on the server on which the program is installed. The LU Socket entitlements are specific to the program and may not be exchanged, interchanged, or aggregated with LU Socket entitlements of another software program.

Usage restrictions on LU Socket

If you have acquired the program based on the LU Socket charge metric, you may install and use this program subject to all of the following restrictions:

- Each program instance may use up to a maximum of 16 GB of allocated SHMTOTAL memory and may only utilize up to a total of 16 processor cores.
- The physical server may have a maximum capacity of four sockets.
- When a program is used in Hot/Active or Idle Standby configuration (as defined above), you must acquire the number of license entitlements for each copy of the program on each Hot/Active or Idle Standby server, using the same charge metric as used for the program on the corresponding primary server. With regard to Hot/Active Standby, when the program is licensed on the primary server on the LU Socket charge metric basis, you must (1) acquire entitlements for the number of sockets included on the server on which the program is installed, and (2) comply with the resource use restrictions specified above. With regard to Idle Standby, when the program is licensed on the primary server on the LU Socket charge metric basis, you must (1) acquire one LU Socket entitlement for each idle standby server, and (2) comply with the resource use restrictions specified above.

Limited Use Virtual Server (LUV Server)

This program is licensed on a LUV Server basis, as follows. A LUV Server is a physical server or a virtual server created by partitioning the resources available to a physical server. A server is a computer system that executes requested procedures, commands, or applications to one or more user or client devices. Where blade technology is employed, each blade is considered a separate server. You must (1) acquire one LUV Server entitlement for each LUV Server on which an instance of the program is installed, and (2) for each instance of the program, comply with the resource use restrictions further defined below in this License Information. In order to license the program on a virtual server basis, you must meet the sub-capacity licensing terms, conditions and eligibility requirements for products licensed on a LUV Server basis, which are described at

<ftp://ftp.software.ibm.com/software/smb/pdfs/LicensingGuide.pdf>

If your virtualization environment is not eligible in accordance with these terms, you must acquire an LUV Server entitlement for each physical server on which an instance of the program is installed.

For example, if you install a single copy of the program on an unpartitioned physical server with 16 processor cores, then you would require a single LUV Server entitlement in your PoE. You would not be permitted to install and run two instances of the program on such an unpartitioned server, because you could not limit each instances' use to the same four processor cores. If your unpartitioned server contained only 4 processor cores total, you may install and run as many instances of the program as you wish, because each would be limited to the same 4 processor cores. If your physical server with 16 processor cores is partitioned into 2 virtual servers using 8 processor cores each, and you install a copy of the program on each of the two virtual servers, you must obtain 2 LUV Server entitlements. In this case, you would be limited to one instance of the program on each virtual server, because if more than one instance was installed on one of these eight processor core virtual servers, you could not limit each instance's use to the same four processor cores. If your physical server with 16 processor cores is partitioned into 4 virtual servers using only 4 processor cores each, and you install a copy of the program on each of the 4 virtual servers, you must obtain 4 LUV Server entitlements. Because each of the four virtual servers are limited to four processor cores each, you could install as many instances of the program as you wish on each, because all of them collectively would be limited to the same four processor cores.

Usage restrictions on Limited Use Virtual Server

If you have acquired the program based on the LUV Server charge metric, you may install and use this program subject to all of the following restrictions:

- The program may use up to a maximum of 4 GB of allocated SHMTOTAL memory.
- The total amount of resources allocated to all instances of the program on a given LUV Server collectively cannot exceed a total of four processor cores.
- The LUV Server must be running the Linux or Windows operating systems on x86 or x86-64 hardware platforms.
- The program may not be used in a Hot/Active Standby configuration (as defined above).
- When a program is used in an Idle Standby configuration (as defined above), you must acquire the number of license entitlements for each copy of the program on each Idle Standby server, using the same charge metric as used for the program on the corresponding primary server. With regard to Idle Standby, when the program is licensed on the primary server on the LUV Server charge metric basis, you must (1) acquire one LUV Server entitlement for each idle Standby server, and (2) comply with the resource use restrictions specified above.

Cross-platform products

Cross-platform product for use on System z

Order the part numbers that follow when the product is used for either the development of code that will be deployed on System z® servers or when the product will be communicating and/or transferring data between a distributed server and a System z server. Otherwise order from the other set of part numbers in this announcement. This set of part numbers provides the identical supply and authorization as the other set in this announcement.

Terms and conditions

The information provided in this announcement letter is for reference and convenience purposes only. The terms and conditions that govern any transaction with IBM are contained in the applicable contract documents such as the IBM International Program License Agreement, IBM International Passport Advantage Agreement, and the IBM Agreement for Acquisition of Software Maintenance.

Licensing

IBM International Program License Agreement including the License Information document and PoE govern your use of the program. PoEs are required for all authorized use.

Part number products only, offered outside of Passport Advantage, where applicable, are license only and do not include Software Maintenance.

This software license includes Software Subscription and Support (also referred to as Software Maintenance).

License Information form numbers

Yes

Warranty

IBM warrants that when the program is used in the specified operating environment, it will conform to its specifications. The warranty applies only to the unmodified portion of the program. IBM does not warrant uninterrupted or error-free operation of the program or that IBM will correct all program defects. You are responsible for the results obtained from the use of the program.

IBM provides you with access to IBM databases containing information on known program defects, defect corrections, restrictions, and bypasses at no additional charge. Consult the IBM Software Support Handbook for further information at

<http://www.ibm.com/support/handbook>

IBM will maintain this information for at least one year after the original licensee acquires the program (warranty period).

Program technical support

Technical support of a program product will be available for a minimum of five years from the general availability date, as long as your Software Maintenance is in effect. This technical support allows you to obtain assistance (via telephone or electronic means) from IBM for product-specific, task-oriented questions regarding the installation and operation of the program product. Software Maintenance also provides you with access to updates, releases, and versions of the program. You will be notified, via announcement letter, of discontinuance of support with 12 months' notice. If you require additional technical support from IBM, including an extension of support beyond the discontinuance date, contact your IBM representative or IBM Business Partner. This extension may be available for a fee.

Money-back guarantee

If for any reason you are dissatisfied with the program and you are the original licensee, you may obtain a refund of the amount you paid for it, if within 30 days of your invoice date you return the program and its PoE to the party from whom you obtained it. If you downloaded the program, you may contact the party from whom you acquired it for instructions on how to obtain the refund.

For programs acquired under the IBM International Passport Advantage Agreement, this term applies only to your first acquisition of the program.

For programs acquired under any of IBM's On/Off CoD software offerings, this term does not apply since these offerings apply to programs already acquired and in use by you.

Authorization for use on home/portable computer

The program may be stored on the primary machine and another machine, provided that the program is not in active use on both machines at the same time. You may not copy and use this program on another computer without paying additional license fees.

IBM Informix Warehouse: Yes
IBM Informix Warehouse Feature: Yes
Informix Dynamic Server (IDS): Yes

Volume orders (IVO)

No

Passport Advantage applies

Yes, and through the Passport Advantage Web site at

<http://www.ibm.com/software/passportadvantage>

This product is only available via Passport Advantage. It is not available as shrinkwrap.

Usage restriction

Yes. Refer to the charge metrics definitions section for details plus use and resource restrictions of:

- Processor Value Unit (PVU)
- Limited Use Socket (LU Socket)
- Limited Use Virtual Server (LUV Server)

For additional information refer to the License Information Document that is available on the IBM Software License Agreement Web site

<http://www.ibm.com/software/sla/sladb.nsf>

International Passport Agreement

Software Subscription and Support (also referred to as Software Maintenance) applies

Yes. Software Subscription and Support (also referred to as Software Maintenance) is included with licenses purchased through Passport Advantage and Passport Advantage Express. Product upgrades and technical support are provided by the Software Subscription and Support (also referred to as Software Maintenance) offering as described in the Agreements. Product upgrades provide the latest versions and releases to entitled software and Technical Support provides voice and electronic access to IBM support organizations, worldwide.

IBM includes one year of Software Subscription and Support (also referred to as Software Maintenance) with each program license acquired. The initial period of Software Subscription and Support (also referred to as Software Maintenance) can be extended by the purchase of a renewal option, if available.

While your Software Subscription and Support (also referred to as Software Maintenance) is in effect, IBM provides you assistance for your routine, short duration installation and usage (how-to) questions, and code-related questions. IBM provides assistance via telephone and, if available, electronic access, to your information systems (IS) technical support personnel during the normal business hours (published prime shift hours) of your IBM support center. (This assistance is not available to your end users.) IBM provides Severity 1 assistance 24 hours a day, 7 days a week. For additional details, consult your IBM Software Support Handbook at

<http://www.ibm.com/support/handbook>

Software Subscription and Support (also referred to as Software Maintenance) does not include assistance for the design and development of applications, your use of programs in other than their specified operating environment, or failures caused by products for which IBM is not responsible under the applicable agreements.

For additional information about the International Passport Advantage Agreement and the IBM International Passport Advantage Express Agreement, visit the Passport Advantage Web site at

Other terms

System i Software Maintenance applies

No

Educational allowance available

Not applicable.

On/Off CoD

To be eligible for On/Off CoD pricing, customers must be enabled for temporary capacity on the corresponding hardware, and the required contract - Z125-6907, Amendment for iSeries® and pSeries® Temporary Capacity On Demand - Software - must be signed prior to use.

IBM Electronic Services

IBM has transformed its delivery of hardware and software support services to help you achieve higher system availability. Electronic Services is a Web-enabled solution that offers an exclusive, no-additional-charge enhancement to the service and support available for IBM servers. These services are designed to provide the opportunity for greater system availability with faster problem resolution and preemptive monitoring. Electronic Services comprises two separate, but complementary, elements: Electronic Services news page and Electronic Services Agent.

The Electronic Services news page is a single Internet entry point that replaces the multiple entry points traditionally used to access IBM Internet services and support. The news page enables you to gain easier access to IBM resources for assistance in resolving technical problems.

The Electronic Service Agent[™] is no-additional-charge software that resides on your server. It monitors events and transmits system inventory information to IBM

on a periodic, client-defined timetable. The Electronic Service Agent automatically reports hardware problems to IBM. Early knowledge about potential problems enables IBM to deliver proactive service that may result in higher system availability and performance. In addition, information collected through the Service Agent is made available to IBM service support representatives when they help answer your questions or diagnose problems. Installation and use of IBM Electronic Service Agent for problem reporting enables IBM to provide better support and service for your IBM server.
