Product overview

IBM® Forms Server enables the creation and delivery of XML forms applications and enables integration of e-forms data with server-side applications. IBM Forms Server consists of the following components:

- IBM Forms Server – API provides specialized functions that extend the capabilities of IBM Forms.
- IBM Forms Server – Forms Services Platform provides a collection of libraries that help you develop applications for extending IBM Forms products and interacting with XFDL documents.
- IBM Forms Server – FileNet Integrator enables you to use IBM Forms with FileNet® P8 and IBM Case Manager.
- IBM Forms Server – Webform Server translates XFDL documents into HTML/JavaScript documents. This allows users to view, fill out, sign, and submit XFDL documents using only a web browser.
