

IBM PowerHA SystemMirror for AIX

Enterprise Edition

Version 7.2.2

Release Notes

Note

Before using this information and the product it supports, read the information in [“Notices” on page 13.](#)

First edition (December 2017)

This edition applies to PowerHA® SystemMirror® Version 7.2.2 for AIX® and to all subsequent release and modifications until otherwise indicated in new editions.

About this document

The Release Notes topics include late technical information that is not included in other topics, and they highlights new functions for the PowerHA SystemMirror Version 7.2.2 licensed program.

Highlighting

The following highlighting conventions are used in this document:

Bold	Identifies commands, subroutines, keywords, files, structures, directories, and other items whose names are predefined by the system. Bold highlighting also identifies graphical objects, such as buttons, labels, and icons that the you select.
<i>Italics</i>	Identifies parameters for actual names or values that you supply.
Monospace	Identifies examples of specific data values, examples of text similar to what you might see displayed, examples of portions of program code similar to what you might write as a programmer, messages from the system, or text that you must type.

Case sensitivity in AIX

Everything in the AIX operating system is case sensitive, which means that it distinguishes between uppercase and lowercase letters. For example, you can use the **ls** command to list files. If you type LS, the system responds that the command is not found. Likewise, **FILEA**, **FiLea**, and **filea** are three distinct file names, even if they reside in the same directory. To avoid causing undesirable actions to be performed, always ensure that you use the correct case.

ISO 9000

ISO 9000 registered quality systems were used in the development and manufacturing of this product.

What's new

April 2019

For more information, see [“Hardware requirement”](#) on page 7.

New functions for PowerHA SystemMirror Version 7.2.2 for AIX

PowerHA SystemMirror Version 7.2.2 for AIX has the following new functions and updates:

Failover Rehearsals

Failover rehearsal provides mirroring status for different storage devices in a multi-site cluster. For more information, see the [Failover rehearsal](#) topic.

Geographic Logical Volume Manager (GLVM)

The `glvm.rpv.util`, `glvm.rpv.client`, and `glvm.rpv.server` filesets were moved from the PowerHA SystemMirror Version 7.2.2 for Enterprise Edition for AIX and added to the AIX Version 7.1.5 base media. For more information, see [Installation prerequisites](#).

Software requirements

Before you install PowerHA SystemMirror Version 7.2.2 for AIX, you must install all available service packs for AIX and PowerHA SystemMirror from the [IBM® Fix Central](#) website.

PowerHA SystemMirror Version 7.2.2 for AIX is supported on the following version of the AIX operating system:

- IBM AIX 7.1 with Technology Level 3 with Service Pack 9, or later
- IBM AIX 7.1 with Technology Level 4 with Service Pack 4, or later
- IBM AIX 7.1 with Technology Level 5, or later
- IBM AIX Version 7.2 with Service Pack 4, or later
- IBM AIX 7.2 with Technology Level 1 with Service Pack 2, or later
- IBM AIX 7.2 with Technology Level 2, or later

Hardware requirement

PowerHA SystemMirror GUI requires IBM POWER6® or later technology-based servers.

Installation and migration

You cannot migrate from PowerHA SystemMirror Version 6.1 to PowerHA SystemMirror Version 7.2.2 for AIX. You must first migrate from PowerHA SystemMirror Version 6.1 to PowerHA SystemMirror Version 7.2. For more information about migrating, see the [Migrating from PowerHA SystemMirror 6.1 to PowerHA SystemMirror 7.1, or later](#) topic.

For more information about upgrading PowerHA SystemMirror Version 7.2.2 for AIX by using a snapshot, see the [Upgrading PowerHA SystemMirror by using a snapshot](#) topic.

For more information about upgrading an offline cluster, see the [Upgrading an offline cluster for PowerHA SystemMirror](#) topic.

For more information about rolling migration, see the [Performing a rolling migration](#) topic.

It is not required to install the PowerHA SystemMirror GUI server in a PowerHA SystemMirror cluster, but the agent must be installed in a cluster. While migrating PowerHA SystemMirror GUI server or agent, an attempt is made to maintain the original state of the service. For example, if the server was active when the migration operation began, an effort is made to ensure it is running again after the migration operation completes.

Additional information

PowerHA SystemMirror graphical user interface (GUI)

After you install the filesets that are available on the PowerHA SystemMirror Version 7.2.2 for AIX media, you must run the **smuiinst.ksh** command to complete the installation process. The **smuiinst.ksh** command automatically downloads and installs the remaining files that are required to complete the PowerHA SystemMirror GUI installation process. These downloaded files are not shipped in the filesets because the files are licensed under the General Public License (GPL).

The PowerHA SystemMirror GUI can be installed on either AIX or Linux® operating system, and can manage clusters from both platforms concurrently, within the same instance of the PowerHA SystemMirror GUI server. For AIX only, a PowerHA SystemMirror GUI Version 7.2.2 server can also work with clusters that runs PowerHA SystemMirror 7.1.3 SP 7, PowerHA SystemMirror 7.2.0 SP 3, or PowerHA SystemMirror 7.2.1. For PowerHA SystemMirror 7.1.3 and PowerHA SystemMirror 7.2.0 clusters, only the monitoring and log viewing capabilities are supported. For PowerHA SystemMirror 7.2.1 clusters, full management capability is provided via service pack 2. Prior to that service pack, only the basic, non-management capabilities are supported.

PowerHA SystemMirror GUI have the following limitation in the PowerHA SystemMirror Version 7.2.2 for AIX:

- If you cannot add or create a cluster, verify that SSH from the PowerHA SystemMirror GUI server system to the remote system you are trying to establish contact with is working, and does not require a response to prompt. For example:

```
# ssh 172.19.67.49 /bin/hostname
The authenticity of host '172.19.67.49 (172.19.67.49)' can't be established.
ECDSA key fingerprint is 41:19:ea:f6:4f:46:91:29:f5:a0:fd:89:91:f7:28:97.
Are you sure you want to continue connecting (yes/no)?
```

In the current version of the PowerHA SystemMirror GUI, you have to respond to the prompt to establish the SSH connection. You have to respond by entering yes to add the host to the `~/ .ssh/known_hosts` file of the PowerHA SystemMirror GUI server.

- In PowerHA SystemMirror GUI, you cannot change the hostname of any managed cluster node. If you must change the hostname of a cluster node that the PowerHA SystemMirror GUI server is managing, you might need to remove the cluster from the PowerHA SystemMirror GUI server before changing the hostname, then add the cluster again after changing the hostname.
- In PowerHA SystemMirror GUI, you cannot change the hostname of the GUI server host. If you must change the hostname of the GUI server, you must either remove all your clusters, then rediscover them after changing the hostname, or manually update the `"/usr/es/sbin/cluster/ui/agent/configuration-agent.json"` file on every cluster node and replace the old server IP address with the new address in the server URL. Restart the agent after this change is complete.
- Creating or adding a cluster currently requires a root login. After the cluster is added in the PowerHA SystemMirror GUI, a root login is no longer required to manage it through the PowerHA SystemMirror GUI.
- When creating a cluster by using the PowerHA SystemMirror GUI wizard, you cannot configure an alternate node name or a persistent IP for the first node that you added to the cluster. The first node is used to authenticate to the remote environment. It is included in the cluster with a default node label that is assigned to it.
- The option to authenticate by using an SSH key is not available from the open terminal feature. For now, SSH authentication is supported only via password.

Documentation

To view the latest updates to the documentation, see the [What's new in PowerHA SystemMirror](#) topic.

To view the latest version of the release notes, see the [PowerHA SystemMirror Version 7.2.2 for AIX release notes](#) topic.

To view the documentation in PDF files, see the [PowerHA SystemMirror Version 7.2.2 for AIX PDFs](#) topic.

Man pages

The man pages for the PowerHA SystemMirror commands are provided in the cluster.man.en_US.es.data fileset. The fileset is installed in the /usr/share/man/cat1 directory. To view the man pages, from the command line, enter `man command_name` (where *command_name* is the name of the command).

You can use the **clmgr** command to perform most of the PowerHA SystemMirror operations. For more information about the operations that you can perform by using the **clmgr** command, see the [clmgr command: Quick reference](#) topic.

Notices

This information was developed for products and services offered in the US.

IBM may not offer the products, services, or features discussed in this document in other countries. Consult your local IBM representative for information on the products and services currently available in your area. Any reference to an IBM product, program, or service is not intended to state or imply that only that IBM product, program, or service may be used. Any functionally equivalent product, program, or service that does not infringe any IBM intellectual property right may be used instead. However, it is the user's responsibility to evaluate and verify the operation of any non-IBM product, program, or service.

IBM may have patents or pending patent applications covering subject matter described in this document. The furnishing of this document does not grant you any license to these patents. You can send license inquiries, in writing, to:

*IBM Director of Licensing
IBM Corporation
North Castle Drive, MD-NC119
Armonk, NY 10504-1785
US*

For license inquiries regarding double-byte character set (DBCS) information, contact the IBM Intellectual Property Department in your country or send inquiries, in writing, to:

*Intellectual Property Licensing

Such information may be available, subject to appropriate terms and conditions, including in some cases, payment of a fee.

The licensed program described in this document and all licensed material available for it are provided by IBM under terms of the IBM Customer Agreement, IBM International Program License Agreement or any equivalent agreement between us.

The performance data and client examples cited are presented for illustrative purposes only. Actual performance results may vary depending on specific configurations and operating conditions.

Information concerning non-IBM products was obtained from the suppliers of those products, their published announcements or other publicly available sources. IBM has not tested those products and cannot confirm the accuracy of performance, compatibility or any other claims related to non-IBM products. Questions on the capabilities of non-IBM products should be addressed to the suppliers of those products.

Statements regarding IBM's future direction or intent are subject to change or withdrawal without notice, and represent goals and objectives only.

All IBM prices shown are IBM's suggested retail prices, are current and are subject to change without notice. Dealer prices may vary.

This information is for planning purposes only. The information herein is subject to change before the products described become available.

This information contains examples of data and reports used in daily business operations. To illustrate them as completely as possible, the examples include the names of individuals, companies, brands, and products. All of these names are fictitious and any similarity to actual people or business enterprises is entirely coincidental.

COPYRIGHT LICENSE:

This information contains sample application programs in source language, which illustrate programming techniques on various operating platforms.
