Starting Perspectives Causes Runtime Error 429

Date: **10/14/03** Part #: **002-TB-03-01-E-8.2** (270817)

When a user who is not a member of the Power Users or Administrators Windows security groups starts Perspectives, the operating system returns the runtime error 429 — Object construction through Active X is not possible. This is because Tm1prc.dll is not correctly registered during installation, and users with restricted operating system rights cannot register .dll files.

To solve this problem an administrator (a member of either the Power Users or Administrators Windows security group) must login to the machine where the error occurs and register both Tm1prc.dll and Tm1xl.ocx.

To register these files, enter the following line at the command prompt from the <Applix_install_dir>\bin directory:

```
Regsvr32.exe Tm1prc.dll Tm1xl.ocx
```

If you accepted the default installation location during installation, the path to <Applix_install_dir>\bin is C:\Program Files\Applix\bin.
