#### 1.0 Introduction

This program directory is intended for system programmers who are responsible for program installation and maintenance. It contains information about the material and procedures associated with the installation of IBM Rational Engineering Lifecycle Manager. This publication refers to IBM Rational Engineering Lifecycle Manager as Rational Engineering Lifecycle Manager.

The Program Directory contains the following sections:

- 2.0, "Program Materials" on page 4 identifies the basic program materials and documentation for Rational Engineering Lifecycle Manager.
- 3.0, "Program Support" on page 10 describes the IBM support available for Rational Engineering Lifecycle Manager.
- 4.0, "Program and Service Level Information" on page 13 lists the APARs (program level) and PTFs (service level) that have been incorporated into Rational Engineering Lifecycle Manager.
- 5.0, "Installation Requirements and Considerations" on page 14 identifies the resources and considerations that are required for installing and using Rational Engineering Lifecycle Manager.
- 6.0, "Installation Instructions" on page 25 provides detailed installation instructions for Rational Engineering Lifecycle Manager. It also describes the procedures for activating the functions of Rational Engineering Lifecycle Manager, or refers to appropriate publications.

#### 1.1 Rational Engineering Lifecycle Manager Description

#### Rational Engineering Lifecycle Manager V6.0.2

Current products and systems are more intelligent, instrumented, and interconnected than ever. This trend has several effects on today's modern product development organizations:

- Smarter products increasingly rely more on software to deliver larger portions of their value.
- At the same time, many organizations are facing a variety of increased business pressures:
  - Get to market faster to compete in an increasingly global economy;
  - Remain compliant with rapidly growing regulations from a growing number of regulators
  - Drive cost out of the development process
- Engineering data sets are becoming larger, more complex, and more interrelated across the roles of mechanical, electrical, and software engineers and their respective tools.

These trends are making relationships between the various roles in product development organizations more complex. Established interactions between mechanical, electrical, and software engineers and their associated workflows are now subject to increased inefficiencies and errors. And the tools and processes for managing product development are strained by these trends in complexity and scale.

Rational Engineering Lifecycle Manager addresses these contemporary trends by providing the capability to visualize and analyze engineering data originating from the work of engineers in various roles using many tools, including tools from multiple vendors. It enables engineering teams to get a better understanding of the relationships in those data so they can make more effective and timely engineering decisions. It helps teams access engineering knowledge regardless of source and practice continuous engineering.

Rational Engineering Lifecycle Manager uses Rational Jazz integration services to increase the visibility and value of engineering data to:

- Get faster, more complete answers to urgent and critical engineering questions using information originating across the development lifecycle.
- Search and report on data across multiple engineering disciplines regardless of data source and tool selection.
- Visualize and analyze engineering data and relationships in the context of user role, product structure, development process, and project.
- Use views to navigate to specific engineering artifacts needed for a particular task, and open the artifacts in the tool that created the artifact.
- Analyze impact of changes using visual and report-based representations of engineering artifacts and their relationships.

Rational Engineering Lifecycle Manager indexes engineering data and makes the data available through custom role, product, process, and project views. Several technologies are key for enabling these capabilities:

- · Rational Engineering Lifecycle Manager and the Jazz platform are built on the Open Services for Lifecycle Collaboration (OSLC) standard from OASIS.
- The OSLC core specification is, in turn, built on the same proven, scalable w3c linked data standards-based technologies that enable near-realtime intelligent queries of information distributed across millions of independent networks, servers, and applications on the global internet.
- Compared to alternative integration techniques, this federated, indexed, web standards-based approach helps simplify deployment time and effort, as well as reduce the run-time impact on engineering tools and the teams using them.

These same technologies allow development of lightweight integration adapters using the OSLC Tracked Resource Set (TRS) specification. Such adapters enable Rational Engineering Lifecycle Manager to index data originating in tools that are not OSLC compliant. IBM offers the Rational Lifecycle Integration Adapters as a commercially sold and supported set of adapters that integrate IBM products to a variety of third-party tools. Additional adapters can be built using the Software Development Kit (SDK) available from the Eclipse Lyo project.

#### 1.2 Rational Engineering Lifecycle Manager FMIDs

Rational Engineering Lifecycle Manager consists of the following FMIDs:

HRJS602 - Rational Jazz Team Server

HRBT602 - Rational Team Concert - Build System Toolkit

HRDV602 - Rational Team Concert - Rational Developer for z System subset

HRBA602 - Rational Build Agent

HRCM602 - Rational Team Concert - Change and Configuration Management (CCM)

HRQM602 - Rational Quality Manager - Quality Management (QM)

HRRM602 - Rational DOORS Next Generation - Requirements Management (RM)

HRCC602 - Rational Common Components

HRWL602 - Rational Websphere Liberty

HRRS602 - IBM Jazz Reporting Services

HRGC602 - Rational Global Configuration Management

HRRE602 - Rational Engineering Lifecycle Manager

HRLI602 - Rational Link Index Provider

#### Note! -

 FMID HRCC602 (Rational Common Components) is required by the other FMIDS. If you are installing IBM Rational Engineering Lifecycle Manager for the first time, you must install FMID HRCC602.

If you have previously installed FMID HRCC602, there is no need to re-install it.

## 2.0 Program Materials

An IBM program is identified by a program number. The program number for Rational Engineering Lifecycle Manager is 5725-H85.

Basic Machine-Readable Materials are materials that are supplied under the base license and are required for the use of the product.

The program announcement material describes the features supported by Rational Engineering Lifecycle Manager. Ask your IBM representative for this information if you have not already received a copy.

#### 2.1 Basic Machine-Readable Material

The distribution medium for this program is DVD. It is installed using SMP/E, and is in SMP/E RELFILE format. See 6.0, "Installation Instructions" on page 25 for more information about how to install the program.

Figure 1 describes the program file content for Rational Engineering Lifecycle Manager.

#### Notes:

- 1. The data set attributes in this table must be used in the JCL of jobs that read the data sets. However, because the data sets are in IEBCOPY unloaded format, their actual attributes might be different.
- 2. If any RELFILEs are identified as PDSEs, ensure that SMPTLIB data sets are allocated as PDSEs.

#### 2.2 Optional Machine-Readable Material

No optional machine-readable materials are provided for Rational Engineering Lifecycle Manager.

#### 2.3 Program Publications

The following sections identify the basic publications for Rational Engineering Lifecycle Manager.

#### 2.3.1 Optional Program Publications

No optional publications are provided for Rational Engineering Lifecycle Manager.

#### 2.4 Program Source Materials

No program source materials or viewable program listings are provided for Rational Engineering Lifecycle Manager.

#### 2.5 Publications Useful During Installation

You might want to use the publications listed in Figure 14 during the installation of Rational Engineering Lifecycle Manager.

| Figure 14. Publications Useful During Installation |                |   |  |  |  |
|--|----------------|---|--|--|--|

## 3.0 Program Support

This section describes the IBM support available for Rational Engineering Lifecycle Manager.

#### 3.1 Program Services

Contact your IBM representative for specific information about available program services.

#### 3.2 Preventive Service Planning

Before you install Rational Engineering Lifecycle Manager, make sure that you have reviewed the current Preventive Service Planning (PSP) information. Review the PSP Bucket for General Information, Installation Documentation, and the Cross Product Dependencies sections. For the Recommended Service section, instead of reviewing the PSP Bucket, it is recommended you use the IBM.ProductInstall-RequiredService fix category in SMP/E to ensure you have all the recommended service installed. Use the FIXCAT(IBM.ProductInstall-RequiredService) operand on the APPLY CHECK command. See 6.1.17, "Perform SMP/E APPLY" on page 41 for a sample APPLY command.

Once you have received your installation DVD, you should contact the IBM Support Center or use S/390 SoftwareXcel to obtain the latest PSP Bucket information. You can also obtain the latest PSP Bucket information by going to the following Web site:

http://www14.software.ibm.com/webapp/set2/psearch/search?domain=psp

You can also use S/390 SoftwareXcel or contact the IBM Support Center to obtain the latest PSP Bucket information.

For program support, access the Software Support Website at http://www-01.ibm.com/software/support/.

PSP Buckets are identified by UPGRADEs, which specify product levels; and SUBSETs, which specify the FMIDs for a product level. The UPGRADE and SUBSET values for Rational Engineering Lifecycle Manager are included in Figure 15.

| Figure 15 (Pa | Figure 15 (Page 1 of 2). PSP Upgrade and Subset ID |  |  |  |  |
|---------------|--|--|--|--|--|
| UPGRADE       | SUBSET   | Description  |  |  |  |
| 5724V82       | HRJS602  | Rational Jazz Team Server for z/OS                             |  |  |  |
|               | HRBT602  | Rational Team Concert - Build System Toolkit for z/OS          |  |  |  |

## 3.3 Statement of Support Procedures

Report any problems which you feel might be an error in the product materials to your IBM Support Center. You may be asked to gather and submit additional diagnostics to assist the IBM Support Center in their analysis.

Figure 16 identifies the component IDs (COMPID) for Rational Engineering Lifecycle Manager.

| Figure 16 (Pag | e 1 of 2). Compon | ent IDs  |                   |
|----------------|-------------------|--|-------------------|
| FMID           | COMPID            | Component Name   | RETAIN<br>Release |
| HRJS602        | 5724V8210         | Rational Jazz Team Server for z/OS                                   | 602               |

## 4.0 Program and Service Level Information

This section identifies the program and relevant service levels of Rational Engineering Lifecycle Manager. The program level refers to the APAR fixes that have been incorporated into the program. The service level refers to the PTFs that have been incorporated into the program.

#### 4.1 Program Level Information

No APARs have been incorporated into Rational Engineering Lifecycle Manager.

#### 4.2 Service Level Information

No PTFs against this release of Rational Engineering Lifecycle Manager have been incorporated into the product package.

Frequently check the Rational Engineering Lifecycle Manager PSP Bucket for HIPER and SPECIAL attention PTFs against all FMIDs that you must install. You can also receive the latest HOLDDATA, then add the **FIXCAT(IBM.PRODUCTINSTALL-REQUIREDSERVICE)** operand on your APPLY CHECK command. This will allow you to review the recommended and critical service that should be installed with your FMIDs.

## 5.0 Installation Requirements and Considerations

The following sections identify the system requirements for installing and activating Rational Engineering Lifecycle Manager. The following terminology is used:

- Driving system: the system on which SMP/E is executed to install the program.
  - The program might have specific operating system or product level requirements for using processes, such as binder or assembly utilities during the installation.
- Target system: the system on which the program is configured and run.
  - The program might have specific product level requirements, such as needing access to the library of another product for link-edits. These requirements, either mandatory or optional, might directly affect the element during the installation or in its basic or enhanced operation.

In many cases, you can use a system as both a driving system and a target system. However, you can make a separate IPL-able clone of the running system to use as a target system. The clone must include copies of all system libraries that SMP/E updates, copies of the SMP/E CSI data sets that describe the system libraries, and your PARMLIB and PROCLIB.

Use separate driving and target systems in the following situations:

- When you install a new level of a product that is already installed, the new level of the product will
  replace the old one. By installing the new level onto a separate target system, you can test the new
  level and keep the old one in production at the same time.
- When you install a product that shares libraries or load modules with other products, the installation
  can disrupt the other products. By installing the product onto a separate target system, you can
  assess these impacts without disrupting your production system.

## 5.1 Driving System Requirements

This section describes the environment of the driving system required to install Rational Engineering Lifecycle Manager.

## 5.1.1 Machine Requirements

The driving system can run in any hardware environment that supports the required software.

## 5.1.2 Programming Requirements

| Figure 17. Driv   | ring System Software Re | equirements         |  |   |
|-------------------|-------------------------|---------------------|--|---|
| Program<br>Number | Product<br>Name         | Minimum<br>VRM      | Minimum Service Level will satisfy these APARs | Included<br>in the<br>shipped<br>product? |
| Any one of the    | following:              |                     |  |   |
| 5694-A01          | z/OS                    | V01.13.00           | N/A  | No  |
| 5650-ZOS          | z/OS                    | V02.01.00 or higher | N/A  | No  |

**Note:** SMP/E is a requirement for Installation and is an element of z/OS but can also be ordered as a separate product, 5655-G44, minimally V03.06.00.

**Note:** Installation might require migration to new z/OS releases to be service supported. See http://www-03.ibm.com/systems/z/os/zos/support/zos\_eos\_dates.html.

#### 5.2 Target System Requirements

This section describes the environment of the target system required to install and use Rational Engineering Lifecycle Manager.

Rational Engineering Lifecycle Manager installs in the z/OS (Z038) SREL.

#### **5.2.1 Machine Requirements**

The target system can run in any hardware environment that supports the required software.

#### 5.2.2 Programming Requirements

**5.2.2.1 Installation Requisites:** Installation requisites identify products that are required and *must* be present on the system or products that are not required but *should* be present on the system for the successful installation of this product.

Mandatory installation requisites identify products that are required on the system for the successful installation of this product.

| Figure 18. Target System Mandatory Installation Requisites |                 |                        |  |   |  |
|--|-----------------|------------------------|--|---|--|
| Program<br>Number  | Product<br>Name | Minimum<br>VRM         | Minimum Service Level will satisfy these APARs | Included<br>in the<br>shipped<br>product? |  |
| Any one of the   | following:      |                        |  |   |  |
| 5694-A01   | z/OS            | V01.13.00              | N/A  | No  |  |
| 5650-ZOS   | z/OS            | V02.01.00 or<br>higher | N/A  | No  |  |

Note: Installation might require migration to new z/OS releases to be service supported. See http://www-03.ibm.com/systems/z/os/zos/support/zos\_eos\_dates.html.

Conditional installation requisites identify products that are not required for successful installation of this product but can resolve such things as certain warning messages at installation time.

Rational Engineering Lifecycle Manager has no conditional installation requisites.

**5.2.2.2 Operational Requisites:** Operational requisites are products that are required and *must* be present on the system or products that are not required but should be present on the system for this product to operate all or part of its functions.

Mandatory operational requisites identify products that are required for this product to operate its basic functions.

Rational Engineering Lifecycle Manager has no mandatory operational requisites.

Conditional operational requisites identify products that are not required for this product to operate its basic functions but are required at run time for this product to operate specific functions.

Rational Engineering Lifecycle Manager has no conditional operational requisites.

**5.2.2.3 Toleration/Coexistence Requisites:** Toleration/coexistence requisites identify products that must be present on sharing systems. These systems can be other systems in a multisystem environment (not necessarily sysplex), a shared DASD environment (such as test and production), or systems that reuse the same DASD environment at different time intervals.

Rational Engineering Lifecycle Manager has no toleration/coexistence requisites.

**5.2.2.4 Incompatibility (Negative) Requisites:** Negative requisites identify products that must not be installed on the same system as this product.

Rational Engineering Lifecycle Manager has no negative requisites.

#### 5.2.3 DASD Storage Requirements

Rational Engineering Lifecycle Manager libraries can reside on all supported DASD types.

Figure 19 on page 17 lists the total space that is required for each type of library.

| Figure 19. Total DASD Space | Figure 19. Total DASD Space Required by Rational Engineering Lifecycle Manager |  |  |  |  |
|-----------------------------|--|--|--|--|--|
| Library Type                | Total Space<br>Required<br>in 3390 Trks  |  |  |  |  |
| Compressed Binaries         | 81226 Tracks   |  |  |  |  |
| Expanded Installation Files | 86376 Tracks   |  |  |  |  |
| Target                      | 407 Tracks   |  |  |  |  |
| Distribution                | 108407 Tracks  |  |  |  |  |
| File System(s)              |  |  |  |  |  |
| HFS or zFS *                | 155220 Tracks  |  |  |  |  |

#### \* Note regarding HFS/zFS space allocation

For the HFS/zFS allocation the total number of tracks of 155220 is specified. However, if only certain FMIDs are going to be applied your HFS/zFS space allocation can be reduced. The following lists the HFS/zFS allocation per FMID to enable you to size your HFS/zFS accordingly.

- HRJS602 14200 Tracks
- HRBT602 19000 Tracks
- HRBA602 100 Tracks
- HRCM602 18500 Tracks
- HRQM602 21700 Tracks
- HRRM602 28400 Tracks
- HRCC602 2000 Tracks
- HRWL602 9500 Tracks
- HRRS602 15700 Tracks
- HRGC602 11900 Tracks
- HRRE602 12300 Tracks
- HRLI602 1920 Tracks

#### Notes:

- 1. For non-RECFM U data sets, IBM recommends using system-determined block sizes for efficient DASD utilization. For RECFM U data sets, IBM recommends using a block size of 32760, which is most efficient from the performance and DASD utilization perspective.
- 2. Abbreviations used for data set types are shown as follows.

- U Unique data set, allocated by this product and used by only this product. This table provides all the required information to determine the correct storage for this data set. You do not need to refer to other tables or program directories for the data set size.
- S Shared data set, allocated by this product and used by this product and other products. To determine the correct storage needed for this data set, add the storage size given in this table to those given in other tables (perhaps in other program directories). If the data set already exists, it must have enough free space to accommodate the storage size given in this table.
- Ε Existing shared data set, used by this product and other products. This data set is not allocated by this product. To determine the correct storage for this data set, add the storage size given in this table to those given in other tables (perhaps in other program directories). If the data set already exists, it must have enough free space to accommodate the storage size given in this table.

If you currently have a previous release of this product installed in these libraries, the installation of this release will delete the old release and reclaim the space that was used by the old release and any service that had been installed. You can determine whether these libraries have enough space by deleting the old release with a dummy function, compressing the libraries, and comparing the space requirements with the free space in the libraries.

For more information about the names and sizes of the required data sets, see 6.1.13, "Allocate SMP/E Target and Distribution Libraries" on page 39.

- 3. Abbreviations used for the file system path type are as follows.
  - New path, created by this product.
  - Χ Path created by this product, but might already exist from a previous release.
  - Previously existing path, created by another product.
- 4. All target and distribution libraries listed have the following attributes:
  - The default name of the data set can be changed.
  - The default block size of the data set can be changed.
  - The data set can be merged with another data set that has equivalent characteristics.
  - The data set can be either a PDS or a PDSE, except SBLZAUTH, ABLZAUTH and ABLZHFS which must be PDSEs.
- 5. All target libraries listed have the following attributes:
  - These data sets can be SMS-managed, but they are not required to be SMS-managed.
  - These data sets are not required to reside on the IPL volume.
  - The values in the "Member Type" column are not necessarily the actual SMP/E element types that are identified in the SMPMCS.
- 6. All target libraries that are listed and contain load modules have the following attributes:
  - These data sets can be in the LPA, but they are not required to be in the LPA.
  - · These data sets can be in the LNKLST.
  - These data sets are not required to be APF-authorized, except for SBLZAUTH.
  - Rational Engineering Lifecycle Manager requires that the SMPLTS data set must be a PDSE. If your existing SMPLTS is a PDS, you will need to allocate a new PDSE and copy your existing SMPLTS into it and then change the SMPLTS DDDEF entry to indicate the new PDSE data set.

The following figures describe the target and distribution libraries and file system paths required to install Rational Engineering Lifecycle Manager. The storage requirements of Rational Engineering Lifecycle Manager must be added to the storage required by other programs that have data in the same library or path.

**Note:** Use the data in these tables to determine which libraries can be merged into common data sets. In addition, since some ALIAS names may not be unique, ensure that no naming conflicts will be introduced before merging libraries.

| Figure 20. Stor   | rage Requirements for F | Rational Engineerii | ng Life          | cycle Manag | ger Target i     | Libraries             |                           |                          |

#### 5.3 FMIDs Deleted

Installing Rational Engineering Lifecycle Manager into same SMP/E target and distribution libraries that contain a previous version of Rational Engineering Lifecycle Manager might result in the deletion of other FMIDs. To see which FMIDs will be deleted, examine the ++VER statement in the SMPMCS of the product.

If you do not want to delete these FMIDs at this time, install Rational Engineering Lifecycle Manager into separate SMP/E target and distribution zones.

If you want to delete these FMIDS it is recommended that you use a dummy function SYSMOD to delete the previous releases of Rational Engineering Lifecycle Manager product from the existing target and distribution libraries, before proceeding with the installation of the new release.

**Note:** These FMIDs are not automatically deleted from the Global Zone. If you want to delete these FMIDs from the Global Zone, use the SMP/E REJECT NOFMID DELETEFMID command. See the SMP/E Commands book for details.

#### 5.4 Special Considerations

#### **Security Considerations:**

In Rational Engineering Lifecycle Manager V06.00.02, there are changes to the PassTicket support for the ISPF client. The necessary changes remove a redundant RACF profile and add a new RACF profile to increase the security in generating PassTickets. If you installed the ISPF client with a previous release, the following tasks should be performed:

- Remove the IRRPTAUTH.BLZAPPL.\* profile, where BLZAPPL is the application ID used for the ISPF client. If you used a different application ID, the profile is named with the application ID you included in the profile name.
- 2. Add the new profile BLZ.CONNECT.BLZAPPL. If you are using a different application ID, change BLZAPPL to your application ID. ISPF client users must have READ access to this profile to generate PassTickets and login to the RTC repository. Follow the instructions in the sample member BLZRACFT in SBLZSAMP, or if you are using the configuration utility, in the generated PassTicket command. Optionally, you can set the profile to BLZ.CONNECT.\*, which enables all ISPF client application IDs to use the profile.

#### **PDSE Considerations:**

Rational Engineering Lifecycle Manager uses the "partitioned data set extended" or PDSE format for the SBLZAUTH target library. There are some operational differences between PDS and PDSE data sets. The PDS format may be shared by more than one z/OS system and no special precautions are necessary. However the PDSE format may only be shared by z/OS systems which are part of a sysplex or which are connected using Global Resource Serialization (are in a GRS complex). If z/OS systems share use of a PDSE data set outside of a sysplex or GRS environment, you may experience severe

problems when the data set is updated. This is due to the fact that PDSE directory information is cached in storage, and when the data set is updated from one system the other system(s) have no knowledge of the update, and their cached directory information will be incorrect.

You must take care not to share the SBLZAUTH data set between z/OS systems unless they are in a sysplex or are connected in a GRS complex. If you need to share the content of the SBLZAUTH data set, a separate copy must be created for each z/OS system.

#### 6.0 Installation Instructions

This chapter describes the installation method and the step-by-step procedures to install and to activate the functions of Rational Engineering Lifecycle Manager.

Please note the following points:

- If you want to install Rational Engineering Lifecycle Manager into its own SMP/E environment, consult the SMP/E manuals for instructions on creating and initializing the SMPCSI and the SMP/E control data sets.
- You can use the sample jobs that are provided to perform part or all of the installation tasks. The SMP/E jobs assume that all DDDEF entries that are required for SMP/E execution have been defined in appropriate zones.
- You can use the SMP/E dialogs instead of the sample jobs to accomplish the SMP/E installation steps.

#### 6.1 Installing Rational Engineering Lifecycle Manager

# **6.1.1 SMP/E Considerations for Installing Rational Engineering Lifecycle Manager**

Use the SMP/E RECEIVE, APPLY, and ACCEPT commands to install this release of Rational Engineering Lifecycle Manager.

## 6.1.2 SMP/E Options Subentry Values

The recommended values for certain SMP/E CSI subentries are shown in Figure 24. Using values lower than the recommended values can result in failures in the installation. DSSPACE is a subentry in the GLOBAL options entry. PEMAX is a subentry of the GENERAL entry in the GLOBAL options entry. See the SMP/E manuals for instructions on updating the global zone.

| Figure 24. SN | Figure 24. SMP/E Options Subentry Values |   |  |  |  |
|---------------|--|---|--|--|--|
| Subentry      | Value                                    | Comment   |  |  |  |
| DSSPACE       | (1500,1500,1500)                         | 3390 DASD tracks                                  |  |  |  |
| PEMAX         | SMP/E Default                            | IBM recommends using the SMP/E default for PEMAX. |  |  |  |

#### 6.1.3 Overview of the installation steps

Overview of steps required to install IBM Rational Engineering Lifecycle Manager.

- 1. Upload sample JCL from the client
- 2. Expand the sample jcl file by using the TSO Receive command
- 3. Sample Jobs
- 4. Run the job to allocate sequential data sets that the FTP step will use
- 5. Upload the compressed RELFILES and SMPMCS from the client
- 6. Expand the RELFILEs by running the sample job, BLZEXPND
- 7. Delete previous release of IBM Rational Engineering Lifecycle Manager (optional)
- 8. Create SMP/E Environment (optional)
- Perform SMP/E RECEIVE
- 10. Allocate SMP/E target and distribution libraries
- 11. Create ZFS file system (optional)
- 12. Allocate file system paths
- 13. Create DDDEF entries
- 14. Perform SMP/E APPLY
- 15. Perform SMP/E ACCEPT

## 6.1.4 Upload Sample JCL from the client

On the client, there is a file containing sample installation JCL. This sample JCL contains a member (BLZSEQAL) that will allocate the sequential data sets on z/OS for the compressed RELFILEs and SMPMCS contained on the client and other members to perform the SMP/E processing. Perform the following steps to upload it from the client to z/OS:

- 1. Allocate a data set on z/OS to use as the target of the upload. You can do this by creating a data set with the characteristics from the job below or by submitting the job below. if you choose to submit the following job you need to make the following updates:
  - a. Add a job card and modify the parameters to meet your site's requirements before submitting.
  - b. **hlq** will be the high level qualifier you choose to use for this data set.
  - c. (Optionally) Replace vvvvvv with the volser you choose to use for this data set.

```
//ALLOC
           EXEC PGM=IEFBR14
//*
//JCLBIN
           DD DSN=hlq.IBM.HRCC602.SMPEJOBS.BIN,
//
              DISP=(NEW, CATLG, DELETE),
//
              DSORG=PS,
//
              RECFM=FB,
//
              LRECL=80,
//
              BLKSIZE=6160,
//*
               VOL=SER=vvvvvv,
//
              UNIT=SYSALLDA,
//
              SPACE=(TRK,(15,1))
```

2. Upload the sample jcl file in binary format from the client to this z/OS data set. If the client is attached to a Windows system, you can use FTP from a command prompt to upload the file. In the sample dialog shown below, commands or other information entered by the user are in bold, and the following values are assumed:

| Figure 25. User Entered Val | lues  |
|-----------------------------|---|
| User enters:                | Values  |
| mvsaddr                     | TCP/IP address or hostname of the z/OS system                                 |
| tsouid                      | Your TSO user ID  |
| tsopw                       | Your TSO password   |
| d:                          | Your client drive   |
| hlq                         | High-level qualifier you used for the data set you allocated in the job above |

```
C:\>ftp mvsaddr
Connected to mvsaddr.
220-FTP Server (user 'email address')
User (mvsaddr:(none)): tsouid
331-Password:
331
Password: tsopw
230-220-FTPD1 IBM FTP CS V2R1 at mvsaddr, 01:18:20 on 2016-03-15.
230-tsouid is logged on. Working directory is "tsouid.".
<u>230</u>
ftp> cd ..
250 ""is the working directory name prefix.
ftp> cd hlq
250 "hlq." is the working directory name prefix.
```

ftp> binary

200 Representation type is Image

ftp> put d:\HRCC602\IBM.HRCC602.F1.BIN 'hlq.IBM.HRCC602.SMPEJOBS.BIN'

200 Port request OK.

125 Storing data set hlq.IBM.HRCC602.SMPEJOBS.BIN

250 Transfer completed successfully.

ftp: 263200 bytes sent in 0.06 Seconds 4112.50 Kbytes/sec.

ftp> quit

221 Quit command received. Goodbye.

#### 6.1.5 Expand the sample jcl file by using the TSO Receive command:

RECEIVE INDA('hlq.IBM.HRCC602.SMPEJOBS.BIN')

When prompted on the TSO receive command, use the appropriate DSNAME as listed below: DS('hlq.IBM.HRCC602.SMPEJOBS')

#### 6.1.6 Sample Jobs

The following sample installation jobs are provided as part of the product to help you install Rational Engineering Lifecycle Manager. The RELFILEs will be prefixed with the high level qualifier ("hlq" in table below) used when the files are "received". The jobs are contained in the sample JCL data set hlq.IBM.HRCC602.SMPEJOBS that was uploaded.

| Figure 26 (Pag | e 1 of 2). Samp | ole Installation Jobs  |                    |
|----------------|-----------------|--|--------------------|
| Job Name       | Job Type        | Description  | RELFILE            |
| BLZSEQAL       | SMP/E           | Sample job to allocate sequential data sets for FTPing the product data sets into  | hlq.IBM.HRCC602.F1 |
| BLZEXPND       | SMP/E           | Sample job to expand the RELFILEs  | hlq.IBM.HRCC602.F1 |
| BLZDEL         | SMP/E           | Sample job to remove previous version(s) of IBM Rational Engineering Lifecycle Manager from an existing SMP/E target and distribution libraries (optional) | hlq.IBM.HRCC602.F1 |
| BLZSMPE        | SMP/E           | Sample job to create an SMP/E environment (optional)   | hlq.IBM.HRCC602.F1 |
| BLZRECV1       | RECEIVE         | Sample SMP/E RECEIVE job for Rational Common Components  | hlq.IBM.HRCC602.F1 |
| BLZRECV2       | RECEIVE         | Sample SMP/E RECEIVE job for Rational Jazz Team Server   | hlq.IBM.HRCC602.F1 |
| BLZRECV3       | RECEIVE         | Sample SMP/E RECEIVE job for Change and Configuration Management   | hlq.IBM.HRCC602.F1 |

| Job Name | Job Type | Description   | RELFILE            |
|----------|----------|---|--------------------|
| BLZRECV4 | RECEIVE  | Sample SMP/E RECEIVE job for Quality Management   | hlq.IBM.HRCC602.F1 |
| BLZRECV5 | RECEIVE  | Sample SMP/E RECEIVE job for Requirements Management                                    | hlq.IBM.HRCC602.F1 |
| BLZRECV7 | RECEIVE  | Sample SMP/E RECEIVE job for Build<br>System Toolkit                                    | hlq.IBM.HRCC602.F1 |
| BLZRECV8 | RECEIVE  | Sample SMP/E RECEIVE job for Rational Developer for z System subset                     | hlq.IBM.HRCC602.F1 |
| BLZRECV9 | RECEIVE  | Sample SMP/E RECEIVE job for Rational Build Agent                                       | hlq.IBM.HRCC602.F1 |
| BLZRECVA | RECEIVE  | Sample SMP/E RECEIVE job for Rational Websphere Liberty                                 | hlq.IBM.HRCC602.F1 |
| BLZRECVB | RECEIVE  | Sample SMP/E RECEIVE job for IBM Jazz Reporting Services                                | hlq.IBM.HRCC602.F1 |
| BLZRECVC | RECEIVE  | Sample SMP/E RECEIVE job for Rational Global Configuration Management                   | hlq.IBM.HRCC602.F1 |
| BLZRECVD | RECEIVE  | Sample SMP/E RECEIVE job for Rational Engineering Lifecycle Manager                     | hlq.IBM.HRCC602.F1 |
| BLZRECVE | RECEIVE  | Sample SMP/E RECEIVE job for Rational Link Index Provider                               | hlq.IBM.HRCC602.F1 |
| BLZALLOC | ALLOCATE | Sample job to allocate target and distribution libraries                                | hlq.IBM.HRCC602.F1 |
| BLZZFS   | ALLOMZF  | Sample job to create, format, and mount the data set for the ZFS file system (optional) | hlq.IBM.HRCC602.F1 |
| BLZISMKD | MKDIR    | Sample job to invoke the supplied BLZMKDIR EXEC to allocate file system paths           | hlq.IBM.HRCC602.F1 |
| BLZDDDEF | DDDEF    | Sample job to define SMP/E DDDEFs   | hlq.IBM.HRCC602.F1 |
| BLZAPPLY | APPLY    | Sample SMP/E APPLY job  | hlq.IBM.HRCC602.F1 |
| BLZACCPT | ACCEPT   | Sample SMP/E ACCEPT job   | hlq.IBM.HRCC602.F1 |
|          |          |   |                    |

## 6.1.7 Run the job to allocate sequential data sets that the FTP step will use

Edit and submit sample job BLZSEQAL in the hlq.IBM.HRCC602.SMPEJOBS data set to allocate data sets on z/OS to be used during the upload process. Use the instructions in the sample job for information on changes required.

#### 6.1.8 Upload the compressed RELFILES and SMPMCS from the client

Upload the files in binary format from the client to the z/OS data set. If the client is a Windows system, you can use FTP from a command prompt to upload the files:

```
C:\>ftp mvsaddr
Connected to mvsaddr.
220-FTP Server (user 'email address')
220
User (mvsaddr:(none)): tsouid
331-Password:
331
Password: tsopw
230-220-FTPD1 IBM FTP CS V2R1 at mvsaddr, 05:36:25 on 2016-03-15.
230-tsouid is logged on. Working directory is "tsouid.".
230
ftp> cd ..
250 ""is the working directory name prefix.
ftp> cd hlq
250 "hlq." is the working directory name prefix.
ftp> binary
200 Representation type is Image
ftp> prompt
Interactive mode Off .

# 6.1.9 Expand the RELFILEs by running the sample job, BLZEXPND:

Edit and submit sample job BLZEXPND to expand the RELFILEs. Consult the instructions in the sample job for more information.

Expected Return Codes and Messages: RC=0

# 6.1.10 Delete previous release of Rational Engineering Lifecycle **Manager (Optional)**

If you wish to install Rational Engineering Lifecycle Manager into an existing set of SMP/E target and distribution libraries that contain a previous release of IBM Rational Engineering Lifecycle Manager then you should run this job to delete the previous release. If you are installing Rational Engineering Lifecycle Manager into a new set of SMP/E target and distribution libraries then you do not need to run this job.

Before running this job you will need to create a dummy function SYSMOD, that can be used to delete the previous release. Edit the sample function sysmod supplied in BLZDELF and specify all the FMIDS that are to be deleted from existing SMP/E target and distribution libraries in the DELETE operand of the ++VER MCS statement.

Edit and submit sample job BLZDEL to delete the previous release of the Rational Engineering Lifecycle Manager. Consult the instructions in the sample job for more information.

Expected Return Codes and Messages: You will receive a return code of 0 if this job runs correctly.

# 6.1.11 Allocate SMP/E CSI (Optional)

If you are using an existing CSI, do not execute this job.

If you are allocating a new SMP/E data set for this install, edit and submit sample job BLZSMPE to allocate the SMP/E data sets for

Rational Engineering Lifecycle Manager. Consult the instructions in the sample job for more information.

**Expected Return Codes and Messages:** You will receive a return code of 0 if this job runs correctly.

# 6.1.12 Perform SMP/E RECEIVE

If you are installing HRCC602, Rational Common Components, edit and submit sample job BLZRECV1 to perform the SMP/E RECEIVE. Consult the instructions in the sample job for more information.

**Expected Return Codes and Messages:** You will receive a return code of 0 if this job runs correctly.

If you are installing HRJS602, Rational Jazz Team Server, edit and submit sample job BLZRECV2 to perform the SMP/E RECEIVE. Consult the instructions in the sample job for more information.

Expected Return Codes and Messages: You will receive a return code of 0 if this job runs correctly.

If you are installing HRCM602, Change and Configuration Management, edit and submit sample job BLZRECV3 to perform the SMP/E RECEIVE. Consult the instructions in the sample job for more information.

**Expected Return Codes and Messages:** You will receive a return code of 0 if this job runs correctly.

If you are installing HRQM602, Quality Management, edit and submit sample job BLZRECV4 to perform the SMP/E RECEIVE. Consult the instructions in the sample job for more information.

**Expected Return Codes and Messages:** You will receive a return code of 0 if this job runs correctly.

If you are installing HRRM602, Requirements Management, edit and submit sample job BLZRECV5 to perform the SMP/E RECEIVE. Consult the instructions in the sample job for more information.

**Expected Return Codes and Messages:** You will receive a return code of 0 if this job runs correctly.

If you are installing HRBT602, Build System Toolkit, edit and submit sample job BLZRECV7 to perform the SMP/E RECEIVE. Consult the instructions in the sample job for more information.

**Expected Return Codes and Messages:** You will receive a return code of 0 if this job runs correctly.

If you are installing HRDV602, Rational Developer for z System subset, edit and submit sample job BLZRECV8 to perform the SMP/E RECEIVE. Consult the instructions in the sample job for more information.

**Expected Return Codes and Messages:** You will receive a return code of 0 if this job runs correctly.

If you are installing HRBA602, Rational Build Agent, edit and submit sample job BLZRECV9 to perform the SMP/E RECEIVE. Consult the instructions in the sample job for more information.

**Expected Return Codes and Messages:** You will receive a return code of 0 if this job runs correctly.

If you are installing HRWL602, Rational Websphere Liberty, edit and submit sample job BLZRECVA to perform the SMP/E RECEIVE. Consult the instructions in the sample job for more information.

**Expected Return Codes and Messages:** You will receive a return code of 0 if this job runs correctly.

If you are installing HRRS602, IBM Jazz Reporting Services, edit and submit sample job BLZRECVB to perform the SMP/E RECEIVE. Consult the instructions in the sample job for more information.

**Expected Return Codes and Messages:** You will receive a return code of 0 if this job runs correctly.

If you are installing HRGC602, Rational Global Configuration Management, edit and submit sample job BLZRECVC to perform the SMP/E RECEIVE. Consult the instructions in the sample job for more information.

Expected Return Codes and Messages: You will receive a return code of 0 if this job runs correctly.

If you are installing HRRE602, Rational Engineering Lifecycle Manager, edit and submit sample job BLZRECVD to perform the SMP/E RECEIVE. Consult the instructions in the sample job for more information.

Expected Return Codes and Messages: You will receive a return code of 0 if this job runs correctly.

If you are installing HRLI602, Rational Link Index Provider, edit and submit sample job BLZRECVE to perform the SMP/E RECEIVE. Consult the instructions in the sample job for more information.

Expected Return Codes and Messages: You will receive a return code of 0 if this job runs correctly.

# **6.1.13 Allocate SMP/E Target and Distribution Libraries**

Edit and submit sample job BLZALLOC to allocate the SMP/E target and distribution libraries for Rational Engineering Lifecycle Manager. Consult the instructions in the sample job for more information.

**Expected Return Codes and Messages:** You will receive a return code of 0 if this job runs correctly.

# Note: Regarding ABLZHFS space allocation

The ABLZHFS data set, allocated in the BLZALLOC job specifies a primary space allocation of 7200 Cylinders (108000 Tracks). This figure is based on the assumption that all FMIDs for Rational Team Concert will be applied and accepted. If you are only applying and accepting certain FMIDs then this space allocation can be adjusted to the amount of space required for those FMIDs. The following list specifies the space allocation utilized by each FMID in the ABLZHFS data set during the ACCEPT phase of the SMP/E installation.

- HRJS602 8000 Tracks
- HRBT602 10400 Tracks
- HRBA602 30 Tracks
- HRCM602 10500 Tracks
- HRQM602 12300 Tracks
- HRRM602 16200 Tracks
- HRCC602 550 Tracks
- HRWL602 4800 Tracks
- HRRS602 8900 Tracks
- HRGC602 6800 Tracks
- HRRE602 7000 Tracks
- HRLI602 1200 Tracks

# 6.1.14 Allocate, create and mount ZFS File System (Optional)

Edit and submit sample job BLZZFS to allocate, create a mountpoint, and mount a ZFS data set.

**Expected Return Codes and Messages:** You will receive a return code of 0 if these jobs run correctly.

# 6.1.15 Allocate File System Paths

The target system HFS or zFS data set must be mounted on the driving system when running the sample BLZISMKD job since the job will create paths in the HFS or zFS.

Before running the sample job to create the paths in the file system, you must ensure that OMVS is active on the driving system and that the target system's HFS or zFS file system is mounted to the driving system. zFS must be active on the driving system if you are installing Rational Engineering Lifecycle Manager into a file system that is zFS.

If you plan to install Rational Engineering Lifecycle Manager into a new HFS or zFS file system, you must create the mountpoint and mount the new file system to the driving system for Rational Engineering Lifecycle Manager.

The recommended mountpoint is /usr/lpp/jazz/v6.0.2.

Edit and submit sample job BLZISMKD to allocate the HFS or zFS paths for Rational Engineering Lifecycle Manager. Consult the instructions in the sample job for more information.

If you create a new file system for this product, consider updating the BPXPRMxx PARMLIB member to mount the new file system at IPL time. This action can be helpful if an IPL occurs before the installation is completed.

**Expected Return Codes and Messages:** You will receive a return code of 0 if this job runs correctly.

# 6.1.16 Create DDDEF Entries

Edit and submit sample job BLZDDDEF to create DDDEF entries for the SMP/E target and distribution libraries for Rational Engineering Lifecycle Manager. Consult the instructions in the sample job for more information.

Expected Return Codes and Messages: You will receive a return code of 0 if this job runs correctly.

Note: If you have previously installed any of the FMIDs, HRJS602, HRBT602, HRDV602, HRBA602, HRCM602, HRQM602, HRRM602, HRCC602, HRWL602, HRRS602, HRGC602, HRRE602, or HRLI602, it is not neccessary to rerun the BLZDDDEF job. It should only be run once!

# 6.1.17 Perform SMP/E APPLY

1. Ensure that you have the latest HOLDDATA; then edit and submit sample job BLZAPPLY to perform an SMP/E APPLY CHECK for Rational Engineering Lifecycle Manager. Consult the instructions in the sample job for more information.

The latest HOLDDATA is available through several different portals, including http://service.software.ibm.com/holdata/390holddata.html. The latest HOLDDATA may identify HIPER and FIXCAT APARs for the FMIDs you will be installing. An APPLY CHECK will help you determine if any HIPER or FIXCAT APARs are applicable to the FMIDs you are installing. If there are any applicable HIPER or FIXCAT APARs, the APPLY CHECK will also identify fixing PTFs that will resolve the APARs, if a fixing PTF is available.

You should install the FMIDs regardless of the status of unresolved HIPER or FIXCAT APARs. However, do not deploy the software until the unresolved HIPER and FIXCAT APARs have been analyzed to determine their applicability. That is, before deploying the software either ensure fixing PTFs are applied to resolve all HIPER or FIXCAT APARs, or ensure the problems reported by all HIPER or FIXCAT APARs are not applicable to your environment.

To receive the full benefit of the SMP/E Causer SYSMOD Summary Report, do not bypass the PRE. ID, REQ, and IFREQ on the APPLY CHECK. The SMP/E root cause analysis identifies the cause only of errors and not of warnings (SMP/E treats bypassed PRE, ID, REQ, and IFREQ conditions as warnings, instead of errors).

Here are sample APPLY commands:

a. To ensure that all recommended and critical service is installed with the FMIDs, receive the latest HOLDDATA and use the APPLY CHECK command as follows

```
APPLY S(fmid,fmid,...) CHECK
FORFMID(fmid, fmid,...)
SOURCEID (RSU*)
FIXCAT(IBM.ProductInstall-RequiredService)
GROUPEXTEND .
```

Some HIPER APARs might not have fixing PTFs available yet. You should analyze the symptom flags for the unresolved HIPER APARs to determine if the reported problem is applicable to your environment and if you should bypass the specific ERROR HOLDs in order to continue the installation of the FMIDs.

This method requires more initial research, but can provide resolution for all HIPERs that have fixing PTFs available and are not in a PE chain. Unresolved PEs or HIPERs might still exist and require the use of BYPASS.

b. To install the FMIDs without regard for unresolved HIPER APARs, you can add the BYPASS(HOLDCLASS(HIPER)) operand to the APPLY CHECK command. This will allow you to install FMIDs even though one or more unresolved HIPER APARs exist. After the FMIDs are installed, use the SMP/E REPORT ERRSYSMODS command to identify unresolved HIPER APARs and any fixing PTFs.

```
APPLY S(fmid,fmid,...) CHECK
FORFMID(fmid, fmid,...)
SOURCEID (RSU*)
FIXCAT(IBM.ProductInstall-RequiredService)
GROUPEXTEND
BYPASS(HOLDCLASS(HIPER).HOLDFIXCAT).
 ..any other parameters documented in the program directory
```

This method is the guicker, but requires subsequent review of the Exception SYSMOD report produced by the REPORT ERRSYSMODS command to investigate any unresolved HIPERs. If you have received the latest HOLDDATA, you can also choose to use the REPORT MISSINGFIX command and specify Fix Category IBM.ProductInstall-RequiredService to investigate missing recommended service.

If you bypass HOLDs during the installation of the FMIDs because fixing PTFs are not yet available, you can be notified when the fixing PTFs are available by using the APAR Status Tracking (AST) function of ServiceLink or the APAR Tracking function of ResourceLink.

2. After you take actions that are indicated by the APPLY CHECK, remove the CHECK operand and run the job again to perform the APPLY.

Note: The GROUPEXTEND operand indicates that SMP/E applies all requisite SYSMODs. The requisite SYSMODS might be applicable to other functions.

Expected Return Codes and Messages from APPLY CHECK: You will receive a return code of 0 if this job runs correctly.

Expected Return Codes and Messages from APPLY: You will receive a return code of 0 if this job runs correctly.

# 6.1.18 Perform SMP/E ACCEPT

Edit and submit sample job BLZACCPT to perform an SMP/E ACCEPT CHECK for Rational Engineering Lifecycle Manager. Consult the instructions in the sample job for more information.

To receive the full benefit of the SMP/E Causer SYSMOD Summary Report, do not bypass the PRE, ID, REQ, and IFREQ on the ACCEPT CHECK. The SMP/E root cause analysis identifies the cause of only errors but not warnings (SMP/E treats bypassed PRE, ID, REQ, and IFREQ conditions as warnings rather than errors).

Before you use SMP/E to load new distribution libraries, it is recommended that you set the ACCJCLIN indicator in the distribution zone. In this way, you can save the entries that are produced from JCLIN in the distribution zone whenever a SYSMOD that contains inline JCLIN is accepted. For more information about the ACCJCLIN indicator, see the description of inline JCLIN in the SMP/E Commands book for details.

After you take actions that are indicated by the ACCEPT CHECK, remove the CHECK operand and run the job again to perform the ACCEPT.

Note: The GROUPEXTEND operand indicates that SMP/E accepts all requisite SYSMODs. The requisite SYSMODS might be applicable to other functions.

Expected Return Codes and Messages from ACCEPT CHECK: You will receive a return code of 0 if this job runs correctly.

If PTFs that contain replacement modules are accepted, SMP/E ACCEPT processing will link-edit or bind the modules into the distribution libraries. During this processing, the Linkage Editor or Binder might issue messages that indicate unresolved external references, which will result in a return code of 4 during the ACCEPT phase. You can ignore these messages, because the distribution libraries are not executable and the unresolved external references do not affect the executable system libraries.

Expected Return Codes and Messages from ACCEPT: You will receive a return code of 0 if this job runs correctly.

### 6.1.19 Run REPORT CROSSZONE

The SMP/E REPORT CROSSZONE command identifies requisites for products that are installed in separate zones. This command also creates APPLY and ACCEPT commands in the SMPPUNCH data set. You can use the APPLY and ACCEPT commands to install those cross-zone requisites that the SMP/E REPORT CROSSZONE command identifies.

After you install Rational Engineering Lifecycle Manager, it is recommended that you run REPORT CROSSZONE against the new or updated target and distribution zones. REPORT CROSSZONE requires a global zone with ZONEINDEX entries that describe all the target and distribution libraries to be reported on.

For more information about REPORT CROSSZONE, see the SMP/E manuals.

# 6.2 Activating Rational Engineering Lifecycle Manager

# **6.2.1 Product Customization**

Refer to Rational Engineering Lifecycle Manager Knowledge Center to complete the configuration tasks.
