Updates to DB2 Cloning Tool V3.2 User's Guide

Abstract

Updates that apply to DB2® Cloning Tool Version for z/OS® 3.2 User's Guide (SC27-6556-01)

Content

The most recent update is listed first.

Update 9

Date of change: June 2017

Topics: Multiple

Change description: APAR PI80906 addresses an issue when cloning table spaces that contains hash keys. The following topics were added or updated:

- Topic: "Using data masking with table space cloning"
- Topic: "Messages"

Topic 1: "Using data masking with table space cloning"

Add the following restriction to "Objects and data types not supported":

- Masks cannot be applied to any column that is defined as part of a hash key.

Topic 2: "Messages"

Add the following messages:

> **CKZ990101W   Subtask *subtask_number*, Unable to add *mask_rule* for *creator.table(column)* column because it is part of the hash key**
>
> **Explanation:** The column that was listed in the message cannot be masked because it is defined as a part of the hash key.
>
> **User response:** Exclude this column from the masking and resubmit the job.

> **CKZ990102W   Subtask *subtask_number*, Unable to add *mask_rule* for *creator.table(column)* column because it is related to a hash key by RI**
>
> **Explanation:** The column that was listed in the message cannot be masked because it is defined as a part of the hash key in an RI-related table.
>
> **User response:** Exclude the related column in the RI-related table from the masking and resubmit the job.
