Updates that apply to IBM® DB2® Analytics Accelerator Loader for z/OS® V2R1 User's Guide (SC27-6777-00)

Date of change: June 2017
Topic: Multiple
Change description: Documentation changes made in support of PTF UI48271 APAR PI80838 – Allow a single BSDS defined for a subsystem

- Topic "What's new" in chapter "Overview"
- Topic "Accelerator Loader messages" in chapter "Troubleshooting"
- Topic "DB2 Subsystem Parameters panel" in chapter "Reference"

Topic: "What's new"
Add the following description:

Accelerator Loader now allows operation with only a single bootstrap data set (BSDS) defined for a DB2 subsystem. To define only a single BSDS for a subsystem, on the DB2 Subsystem Parameters panel, you can leave the "DB2 Bootstrap DSN #02" field blank. Previously, a value in this field was required.

Topic: "Accelerator Loader messages"
Remove message HLO482E, which is no longer used.

Topic: "DB2 Subsystem Parameters panel"
Replace the descriptions of the following fields with the following updated content:

DB2 Bootstrap DSN #01
>   (required) The full data set name of the first bootstrap data set that is being used by this DB2 subsystem. No default value.

DB2 Bootstrap DSN #02
>   (optional) The full data set name of the second bootstrap data set that is being used by this DB2 subsystem. No default value.
