# Documentation corrections for Tivoli Storage Productivity Center Version 5.2

Refer to this document for corrections to the IBM® Tivoli® Storage Productivity Center documentation.

## Tivoli Storage Productivity Center online help

The following text is incorrect in the *Data collection* topic of the online help for the web-based GUI:

"When you upgrade Tivoli Storage Productivity Center to Version 5.2, the existing probe and performance monitor jobs are automatically migrated. Scan jobs that include only servers are also automatically migrated."

The following text is the correct text:

"When you upgrade Tivoli Storage Productivity Center to Version 5.2, the existing probe and performance monitor jobs are automatically migrated."

## Tivoli Storage Productivity Center information center

- The following note is missing from the *Planning for LDAP* and *Configuring Tivoli Storage Productivity Center and Jazz for Service Management for single sign-on* information center topics:

Single sign-on is only supported when the following conditions are met:

- Jazz™ for Service Management is installed and configured with the same LDAP configuration as the web server.
- The LTPA token has been exported from Jazz for Service Management and imported to the web server.

The LTPA key is imported or exported automatically when you install or upgrade in a single-server environment. For more information about importing or exporting the LTPA key in a multiple-server environment, see the Jazz for Service Management information center. Search for *Importing the LTPA keys* and *Exporting the LTPA keys*.

- The following information is missing from step 1 in the *Adding an LDAP repository to the federated repositories* information center topic:

For Tivoli Storage Productivity Center LDAP configurations, you must add the group from the LDAP server to Tivoli Storage Productivity Center. To log in to the Tivoli Storage Productivity Center web-based GUI by using the LDAP user name, click **Settings > User management > Add group**.

- The following information is missing from the final paragraph in the *Adding an LDAP repository to the federated repositories* information center topic:

For Tivoli Storage Productivity Center for Replication LDAP configurations, you must add the LDAP group in the Tivoli Storage Productivity Center for Replication GUI. You can then log in by using the LDAP user name.

- The following information about how to secure the installation is missing from the *Installing and configuring the Tivoli Storage Productivity Center Monitoring Agent on AIX® or Linux* information center topic:

For more information about securing the installation, see the IBM Tivoli Monitoring information center. Search for *Linux or UNIX: Installing a monitoring agent* and *Appendix G: Securing your IBM Tivoli Monitoring installation on Linux or UNIX*.

- The following substeps are missing from step 6 in the *Enabling secure communication between Tivoli Storage Productivity Center and the LDAP repository* information center topic:
  1. If the existing certificate has expired, click **Security > SSL certificate and key management > Key stores and certificates > NodeDefaultTrustStore > Signer certificates**.
  2. Select the expired certificated, and click **Delete**.
