At a glance

IBM® InfoSphere Change Data Capture for z/OS® V6.2 can help you:

• Load real-time information into a data warehouse or operational data store
• Eliminate the batch window by providing continuous extract, transform, and load of data into target systems
• Integrate real-time inventory and sales information with other commercial sites
• Integrate product and customer data across multiple branches, outlets, and offices
• Keep production systems running 24 X 7 for worldwide operations

Overview

IBM InfoSphere Change Data Capture for z/OS V6.2 provides real-time data integration across diverse data stores and platforms. It uses change data capture technology to:

• Integrate high volumes of data with minimal impact to the production system.
• Support continuous extract, transform, and load functionality across systems. Changes are captured as they happen, allowing up-to-the-minute data to flow between systems to support real-time reporting, business intelligence, and synchronization of applications.

InfoSphere Change Data Capture for z/OS enables deployment using a graphical user interface.

Features

• Expanded support for multibyte character sets: InfoSphere Change Data Capture for z/OS now supports multibyte characters in column mapping, derived expressions, and user exits. This includes support for multibyte DB2® metadata, for example, column names and table names.
• High performance: InfoSphere Change Data Capture for z/OS allows for scaling to high-volume replication environments. Using native log-based change data capture, it can handle increasing volumes of data to provide data integration at the pace of business.
• Log-based change data capture: Whether data is integrated periodically or in real-time, only changed data is captured and transferred from publisher to subscriber systems. Instead of performing queries directly against the database, InfoSphere Change Data Capture for z/OS captures changed data directly from the database logs.

Change data capture can help improve operational efficiency and can help save time and resources by eliminating redundant data transfer and saving network bandwidth. By accessing data from the logs, InfoSphere Change Data Capture for z/OS ensures that there is minimal performance impact on mission-critical applications.
• Data integrity: InfoSphere Change Data Capture for z/OS is designed to achieve guaranteed
delivery of data by synchronizing positional information between the source and target.
Transactional integrity is achieved by applying transactions in the same order on the target as
on the source.
• Ease of use: An intuitive user interface that consolidates configuration and monitoring of the
replication environment helps lower total cost of ownership.
• Multiplatform support: Out-of-the-box, programming-free data integration among DB2 for
Linux®, UNIX®, and Windows®, Microsoft® SQL Server, Oracle, Sybase, Teradata, and
across UNIX, Linux, HP-UX Itanium®, HP-UX PA-RISC, Sun Solaris, Microsoft Windows NT®,
Windows 2000, Windows XP, Windows 2003, IBM System i™, IBM System p™, and IBM z/
OS. Flat file integration is also supported.
With zero programming required, you can invest your effort in higher value IT projects.
Your company can leverage its legacy systems and integrate data across all supported
platforms without making significant changes to the existing environment. Future changes
in the computing environment can also be easily accommodated to protect your company’s
investment.

Key prerequisites

Refer to the Hardware requirements and Software requirements sections.

Planned availability date

August 15, 2008

Description

InfoSphere Change Data Capture for z/OS is a flexible product for many business scenarios
as it supports a variety of enterprise architectures and replication configurations whether it’s
unidirectional, bidirectional, cascading, or a data distribution environment. Its features include:

• One-to-one: Source and target have similar structure.
• Live audit: A complete audit trail of source to the target.
• Adaptive apply: Used when you know that the source and target are currently not
synchronized (identical copies of each other) and you want to apply data from the source as
quickly as possible to the target.
• Summarization: Used to accumulate or subtract numerical values on the target.
• One-to-one consolidation: Used to merge data scattered across different tables into a single
row.
• One-to-many consolidation: Used to apply a source lookup table change to all target rows
affected by the change.
• Conflict detection: Uses standard or customized methods to resolve conflicts to ensure data
integrity.

Custom business logic can be integrated at several points within the replication process.
Transformations, custom expressions, and custom business logic add to the flexibility of
InfoSphere Change Data Capture for z/OS that enable you to customize your data integration
flow and configure your replication environment. The result can help lower your total cost of
ownership.

IBM InfoSphere Change Data Capture for z/OS uses a robust log data cache so that the DB2
logs are only accessed once under normal operations, regardless of the number of integration
processes running concurrently. This results in reduced demand on DB2 and the DB2 logs.

Monitoring is provided through the InfoSphere Change Data Capture Management Console.
Throughput and latency statistics provide visibility into replication processes for monitoring and
troubleshooting. Graphs are displayed for a visual representation of throughput and latency; this
enables a quicker assessment of the health and status of the environment. A replication diagram
displays the relationships between data stores in the replication environment; this assists with monitoring as well as problem detection and diagnosis. The result for you is increased peace of mind since the state of the replication environment is readily available and reduced time and effort are required to troubleshoot problems.

**Accessibility by people with disabilities**

A U.S. Section 508 Voluntary Product Accessibility Template (VPAT) containing details on accessibility compliance can be requested at

**Value Unit-based pricing**

Value Unit pricing for eligible IBM z/OS IBM International Program License Agreement (IPLA) programs enables a lower cost of incremental growth and enterprise aggregation. Each z/OS IPLA product with Value Unit pricing, has a single price per Value Unit and a conversion matrix, called Value Unit Exhibit, for converting from some designated measurement to Value Units. Most commonly, Millions of Service Units (MSUs) is the measurement designated by IBM to be converted to Value Units. Some other measurements are engines or messages. Since MSUs are the most common measurement, that measurement will be used for the remainder of this description.

Value Unit pricing offers price benefits for you. For each z/OS IPLA program with Value Unit pricing, the quantity of that program needed to satisfy applicable IBM terms and conditions is referred to as the **required license capacity**. Each of the various Value Unit Exhibits stipulate that the larger your required license capacity, the fewer Value Units per MSU you will need. Value Unit Exhibits are uniquely identified by a three digit code and referred to using the nomenclature VUEXX, where XXX is the three digit code.

Subsequent acquisitions of Value Unit priced programs offer additional price benefits. The quantity of each z/OS IPLA program that you have acquired is referred to as **entitled license capacity**. If you wish to grow your entitled license capacity for a z/OS IPLA program, the calculation to determine additional needed Value Units is based upon the number of Value Units already acquired.

For each z/OS IPLA program with Value Unit pricing, you should:

- Determine the required license capacity, in MSUs
- Aggregate the MSUs across the enterprise
- Convert the total MSUs to Value Units, using the applicable Value Unit Exhibit
- Multiply the price per Value Unit by the total number of Value Units to determine the total cost

To simplify conversion from the designated measurement to Value Units or vice-versa, use the Value Unit Converter Tool. For additional information or to obtain a copy of the Value Unit Converter Tool, visit the Value Unit Converter Tool Web site

http://ibm.com/zseries/swprice/vuctool

Note that Value Units of a given product cannot be exchanged, interchanged, or aggregated with Value Units of another product.

To determine the required license capacity for the z/OS IPLA program you selected, refer to the **Terms and conditions** section.

**Product positioning**

InfoSphere Change Data Capture for z/OS is integrated into the IBM Information Management software portfolio. This product is intended for:

- Customers who need accurate and frequent sales and customer reports to make good operational decisions regarding pricing, merchandising, and inventory management. This is
enabled through consolidation of key business data from diverse operational systems into a centralized data warehouse in real time.

- Companies that want more business agility through real-time change data capture.
- Enterprises that require more business visibility through granular data changes in real-time business intelligence.
- Organizations that want increased responsiveness to business events and the ability to capitalize on upcoming business opportunities through event detection.
- Retailers who want to sell in stores, over the Web, and by phone, and who need consistent up-to-date information accessible to all three channels. An example is ensuring that wedding registry purchases aren't duplicated and that customers can inquire over the phone or on the Web about product availability and the status of orders completed through other channels.
- Public companies that need to do consolidated financial reporting across a range of transactional systems in different regions, departments, or business units.
- Companies that need to migrate data from an incompatible ERP application of an acquired company into their own ERP application (or between incompatible versions of an ERP application).
- Shipping companies that want customers to be able to access real-time shipment information on their Web site while minimizing the impact on their mission-critical logistics systems they use to ensure efficient, continuous operations.
- Government agencies that want to provide public access to up-to-date information on criminal proceedings on the Internet but cannot risk letting users directly access sensitive information on offenders.
- Financial Services companies that need to flow data from legacy financial systems on mainframes into systems on open platforms to support Internet-based communications, statement processing, and other applications more efficiently with minimal impact to key legacy systems.
- Health insurers that need to offload queries, reports, and backups to avoid impacting performance and user response times on their claims processing systems that are essential for operations.

**Offering Information**

Product information is available via the Offering Information Web site

http://www.ibm.com/common/ssi

**Publications**

Publications are not available through the IBM Publications Centre at this time.

Refer to the IBM Publications Centre Web site for more information about publication ordering.

http://www.ibm.com/shop/publications/order

**Technical information**

**Specified operating environment**

**Hardware requirements**

- IBM InfoSphere Change Data Capture for z/OS requires a z/Architecture® processor to execute.
• Installation and execution data sets take approximately 50 cylinders of a 3390 DASD device. If the Log Caching feature is enabled, a minimum of another 140 cylinders is used.

• A single instance of InfoSphere Change Data Capture for z/OS runs in a single address space but requires extended CSA (ECSA) during its execution. The amount of ECSA varies, depending on the number of active subscriptions. Each subscription absorbs 72K of ECSA in a single DB2 subsystem environment and 288K of ECSA in a DB2 Data Sharing Group environment.

• While replicating, InfoSphere Change Data Capture for z/OS collects DB2 Log records into groups based on logical units of work. These log records are staged in virtual storage that is backed either by hiperspaces or by storage "above the bar." In the case of excessive numbers or size of the logical units of work outstanding, this virtual storage is paged by the operating system to auxiliary storage.

Software requirements

Supported platforms:

• z/OS V1.4, or later

Supported database servers:

• DB2 for z/OS V7.1, V8.1, and V9.1

InfoSphere Change Data Capture for z/OS executes in either a single DB2 subsystem environment or in a DB2 Data Sharing Group environment.

The program's specifications and specified operating environment information may be found in documentation accompanying the program, if available, such as a README file, or other information published by IBM, such as an announcement letter. Documentation and other program content may be supplied only in the English language.

Packaging

IBM InfoSphere Change Data Capture for z/OS is distributed in one package with the following:

• IBM International Program License Agreement
• One 3480 tape uncompressed
• Program Directory
• One DVD with documentation and Management Console software

This program, when downloaded from a Web site, contains the applicable IBM license agreement and License Information, if appropriate.

Security, auditability, and control

InfoSphere Change Data Capture for z/OS uses the security and auditability features of the host hardware or software. The customer is responsible for evaluation, selection, and implementation of security features, administrative procedures, and appropriate controls in application systems and communication facilities.

Software Services

IBM Software Services has the breadth, depth, and reach to manage your services needs. You can leverage the deep technical skills of our lab-based, software services team and the business consulting, project management, and infrastructure expertise of our IBM Global Services team. Also, we extend our IBM Software Services reach through IBM Business Partners to provide an extensive portfolio of capabilities. Together, we provide the global reach, intellectual capital, industry insight, and technology leadership to support a wide range of critical business needs.

To learn more about IBM Software Services or to contact a Software Services sales specialist, visit

Sub-capacity processor

A processor core is a functional unit within a computing device that interprets and executes instructions. A processor core consists of at least an instruction control unit and one or more arithmetic or logic unit. With multicore technology, each core is considered a processor. For programs eligible for sub-capacity licensing, a PoE must be acquired for all activated processor cores available for use in each partition (utilizing eligible partitioning technologies) where the program runs. Refer to the program's license information to determine applicable sub-capacity terms.

The program in this announcement has Value Unit-Based pricing.

Program number | Program name                        | Value Unit exhibit |
----------------|-------------------------------------|--------------------|
5655-U96       | InfoSphere Change Data Capture for z/OS V6.2 | VUE007             |

For each z/OS IPLA program with Value Unit pricing, the quantity of that program needed to satisfy applicable IBM terms and conditions is referred to as the required license capacity. Your required license capacity is based upon the following factors:

• The z/OS IPLA program you select
• The applicable Value Unit Exhibit
• The applicable terms
• Whether your current mainframes are full capacity or sub-capacity

Value Unit exhibit VUE007

<table>
<thead>
<tr>
<th></th>
<th>MSUs minimum</th>
<th>MSUs maximum</th>
<th>Value Units/MSU</th>

<td>12</td>
</tr>
<tr>
<td>ESL models</td>
<td>2</td>
</tr>
</tbody>
</table>

Ordering example

The total number of Value Units is calculated according to the following example.

If your required license capacity is 1,500 MSUs for your selected z/OS IPLA product, the applicable Value Units would be:
Translation from MSUs to Value Units

<table>
<thead>
<tr>
<th>MSUs</th>
<th>Value Units/MSU</th>
<th>Value Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Base</td>
<td>3</td>
<td>1.00</td>
</tr>
<tr>
<td>Tier A</td>
<td>42</td>
<td>.45</td>
</tr>
<tr>
<td>Tier B</td>
<td>130</td>
<td>.36</td>
</tr>
<tr>
<td>Tier C</td>
<td>140</td>
<td>.27</td>
</tr>
<tr>
<td>Tier D</td>
<td>1,185</td>
<td>.20</td>
</tr>
<tr>
<td>Total</td>
<td>1,500</td>
<td></td>
</tr>
</tbody>
</table>

When calculating the total number of Value Units, the sum is to be rounded up to the next integer.

Example: In the above ordering example, for the product running on a machine with 1,500 MSUs requiring 344 Value Units, order feature number G4FG, quantity 94, and feature number G4FH, quantity 1.

Ordering z/OS through the Internet

ShopzSeries provides an easy way to plan and order your z/OS ServerPac or CBPDO. It will analyze your current installation, determine the correct product migration, and present your new configuration based on z/OS. Additional products can also be added to your order (including determination of whether all product requisites are satisfied). ShopzSeries is available in the U.S. and several countries in Europe. In countries where ShopzSeries is not available yet, contact your IBM representative (or IBM Business Partner) to handle your order via the traditional IBM ordering process.

For more details and availability, visit the ShopzSeries Web site at

Basic license

On/Off CoD

InfoSphere Change Data Capture for z/OS is eligible for On/Off CoD with a temporary use charge calculated based on MSUs per-day usage.

Program name: InfoSphere Change Data Capture for z/OS V6.2
Program PID: 5655-U96

Subscription and Support

To receive voice technical support via telephone and future releases and versions at no additional charge, Subscription and Support must be ordered. The capacity of Subscription and Support (Value Units) must be the same as the capacity ordered for the product licenses.

To order, specify the Subscription and Support program number (PID) referenced above and the appropriate license or charge option.

IBM is also providing Subscription and Support for these products via a separately purchased offering under the terms of the IBM International Agreement for Acquisition of Software Maintenance (IAASM). This offering:

• Includes and extends the support services provided in the base support to include technical support via telephone.
• Entitles you to future releases and versions, at no additional charge. Note that you are not entitled to new products.
When Subscription and Support is ordered, the charges will automatically renew annually unless cancelled by you.

The combined effect of the IPLA license and the Agreement for Acquisition of Software Maintenance gives you rights and support services comparable to those under the traditional ICA S/390® and z/OS license or its equivalent. To ensure that you continue to enjoy the level of support you are used to in the ICA business model, you must order both the license for the program and the support for the selected programs at the same Value Unit quantities.

**Single version charging**

To elect single version charging, you must notify and identify to IBM the prior program and replacement program, and the machine the programs are operating on.

**Customized Offerings**

Product deliverables are shipped only via Customized Offerings (for example, CBPDO, ServerPac, SystemPac®).

CBPDO and ServerPac are offered for Internet delivery, where ShopzSeries product ordering is available. Internet delivery of ServerPac may help improve automation and software delivery time. For more details on Internet delivery, refer to the ShopzSeries help information at http://www.software.ibm.com/ShopzSeries

Media type for this software product is chosen during the Customized Offerings ordering process. Based on your customer environment, it is recommended that the highest possible density tape media is selected. Currently offered media types are:

- CBPDOS - 3480, 3480 Compressed, 3490E, 3590, 3592*
- ServerPacs - 3480, 3480 Compressed, 3490E, 3590, 3592*
- SystemPacs - 3480, 3480 Compressed, 3490E, 3590, 3592*

*3592 is highest density media. Selecting 3592 will ship the fewest number of media.

Once a product becomes generally available, it will be included in the next ServerPac and SystemPac monthly update.

Production of software product orders will begin on the planned general availability date.

- CBPDO shipments will begin one week after general availability.
- ServerPac shipments will begin two weeks after inclusion in ServerPac.
- SystemPac shipments will begin four weeks after inclusion in SystemPac due to additional customization, and data input verification.

**Terms and conditions**

The information provided in this announcement letter is for reference and convenience purposes only. The terms and conditions that govern any transaction with IBM are contained in the applicable contract documents such as the IBM International Program License Agreement and the IBM Agreement for Acquisition of Software Maintenance.

**Licensing**

IBM International Program License Agreement including the License Information document and Proof of Entitlement (PoE) govern your use of the program. PoEs are required for all authorized use.

**Agreement for Acquisition of Software Maintenance**

The following agreement applies for maintenance and does not require customer signatures:
• IBM Agreement for Acquisition of Software Maintenance (Z125-6011)

These programs are licensed under the IBM Program License Agreement (IPLA) and the associated Agreement for Acquisition of Software Maintenance, which provide for support with ongoing access to releases and versions of the program. These programs have a one-time license charge for use of the program and an annual renewable charge for the enhanced support that includes telephone assistance (voice support for defects during normal business hours), as well as access to updates, releases, and versions of the program as long as support is in effect.

S/390 and z/OS IBM Operational Support Services - SupportLine is an option if you desire added services.

License Information form number
GI11-8705-00

The program’s License Information will be available for review on the IBM Software License Agreement Web site

Limited warranty applies
Yes

Limited warranty
IBM warrants that when the program is used in the specified operating environment, it will conform to its specifications. The warranty applies only to the unmodified portion of the program. IBM does not warrant uninterrupted or error-free operation of the program or that IBM will correct all program defects. You are responsible for the results obtained from the use of the program.

IBM provides you with access to IBM databases containing information on known program defects, defect corrections, restrictions, and bypasses at no additional charge. For further information, consult the IBM Software Support Handbook found at

http://techsupport.services.ibm.com/guides/handbook.html

IBM will maintain this information for at least one year after the original licensee acquires the program (warranty period).

Program support
Enhanced support, called Subscription and Support, includes telephone assistance, as well as access to updates, releases, and versions of the program as long as support is in effect. You will be notified of discontinuance of support with 12 months’ notice.

Money-back guarantee
If for any reason you are dissatisfied with the program and you are the original licensee, you may obtain a refund of the amount you paid for it, if within 30 days of your invoice date you return the program and its PoE to the party from whom you obtained it. If you downloaded the program, you may contact the party from whom you acquired it for instructions on how to obtain the refund.

For clarification, note that for programs acquired under any of IBM's On/Off Capacity on Demand (On/Off CoD) software offerings, this term does not apply since these offerings apply to programs already acquired and in use by you.

Authorization for use on home/portable computer
You may not copy and use this program on another computer without paying additional license fees.
Other terms

Volume orders (IVO)
No

IBM International Passport Advantage Agreement

Passport Advantage applies
No

Usage restriction
Yes

Software Maintenance applies
No. For operating system software, the revised IBM Operational Support Services - SupportLine offering will provide support for those operating systems and associated products that are not available with the newly announced Software Maintenance offering. This will ensure total support coverage for your enterprise needs, including IBM and selected non-IBM products. For complete lists of products supported under both the current and revised offering, visit

http://www.ibm.com/services/sl/products

IBM Operational Support Services - SupportLine
No

System i Software Maintenance applies
No

Variable charges apply
Yes

Educational allowance available
Yes. A 15% education allowance applies to qualified education institution customers.

Academic use allowance: No

Sub-capacity terms and conditions

For each z/OS IPLA program with Value Unit pricing, the quantity of that program needed to satisfy applicable IBM terms and conditions is referred to as the required license capacity. Your required license capacity is based upon the following factors:

- The z/OS IPLA program you select
- The applicable Value Unit Exhibit
- The applicable terms
- Whether your current mainframes are full capacity or sub-capacity

For more information on the Value Unit Exhibit for the z/OS IPLA program you selected, refer to the section.

<table>
<thead>
<tr>
<th>Program number</th>
<th>Program name</th>
<th>Terms</th>
<th>Parent, if applicable</th>
</tr>
</thead>
<tbody>
<tr>
<td>5655-U96</td>
<td>InfoSphere Change Data Capture for z/OS</td>
<td>reference-based sub-capacity</td>
<td>DB2 V7, V8, and V9</td>
</tr>
</tbody>
</table>
**Sub-capacity mainframes**

The following terms apply.

Reference based: The required license capacity of a z/OS IPLA program with these terms equals the license capacity of the applicable monthly license charge (MLC) program. This MLC program is called the parent program.

For more information on mainframe MSU-rated capacities, refer to The IBM z/OS Machines Exhibit, Z125-3901, or visit the Mainframes section of the z/OS Exhibits Web site

http://ibm.com/zseries/library/swpriceinfo/

For more information on sub-capacity z/OS IPLA terms and conditions, refer to Software Announcement A04-1077, dated August 10, 2004.

For additional information for products with reference-based terms, z/OS IPLA sub-capacity programs with reference-based terms adds value to the parent program across the environment, regardless of where in the environment the z/OS IPLA program executes.

An environment is defined as either a single or stand-alone machine or a qualified Parallel Sysplex®. You may have one or more different environments across the enterprise. To determine the required license capacity for each z/OS IPLA program with referenced-based terms, each environment should be assessed separately.

When a z/OS IPLA sub-capacity program with reference-based terms is used in a qualified Parallel Sysplex environment, the required license capacity of the z/OS IPLA program must equal with the license capacity of the parent program across the Parallel Sysplex. Qualified Parallel Sysplex refers to one:

- That meets the criteria defined in Hardware Announcement A98-0009, dated January 13, 1998
- Where MLC pricing is aggregated across the sysplex

**Sub-capacity eligibility**

To be eligible for sub-capacity charging on select z/OS IPLA programs, you must first implement and comply with all terms of either sub-capacity Workload License Charges (WLC) or sub-capacity Entry Workload License Charges (EWLC). To implement sub-capacity WLC or EWLC, a machine must be z/OS (or equivalent). On that machine:

- All instances of the OS/390® operating system must be migrated to the z/OS (or z/OS.e) operating systems
- Any licenses for the OS/390 operating system must be discontinued
- All instances of the z/OS operating (or z/OS.e) systems must be running in z/Architecture (64-bit) mode

For that machine, you must create and submit a Sub-Capacity Report to IBM each month. Sub-Capacity Reports must be generated using the Sub-Capacity Reporting Tool (SCRT). For additional information or to obtain a copy of SCRT, visit the z/OS Software Pricing Web site

http://ibm.com/zseries/swprice

You must comply with all of the terms of the WLC or EWLC offering, whichever is applicable:

- The complete terms and conditions of sub-capacity WLC are defined in the IBM Customer Agreement - Attachment for z/OS Workload License Charges (Z125-6516).
- The complete terms and conditions for sub-capacity EWLC are defined in the IBM Customer Agreement - Attachment for IBM z/OS 890 and 800 License Charges (Z125-6587).

Additionally, you must sign and comply with the terms and conditions specified in the amendment to the IPLA contract - Amendment for IBM z/OS and IBM System z™ Programs Sub-Capacity Pricing (Z125-6929). Once the amendment is signed, the terms in the amendment replace any and all previous z/OS IPLA sub-capacity terms and conditions.
Sub-capacity utilization determination

Sub-capacity utilization is determined based on the utilization of a sub-capacity eligible reference product and machine.

On/Off CoD

To be eligible for On/Off CoD pricing, you must be enabled for temporary capacity on the corresponding hardware, and the required contract, Attachment for Customer Initiated Upgrade and IBM eServer™ On/Off Capacity on Demand - Software (Z125-6611) must be signed prior to use.

IBM Electronic Services

IBM has transformed its delivery of hardware and software support services to help you achieve higher system availability. Electronic Services is a Web-enabled solution that offers an exclusive, no-additional-charge enhancement to the service and support available for IBM servers. These services are designed to provide the opportunity for greater system availability with faster problem resolution and preemptive monitoring. Electronic Services comprises two separate, but complementary, elements: Electronic Services news page and Electronic Services Agent.

The Electronic Services news page is a single Internet entry point that replaces the multiple entry points traditionally used to access IBM Internet services and support. The news page enables you to gain easier access to IBM resources for assistance in resolving technical problems.

The Electronic Service Agent™ is no-additional-charge software that resides on your server. It monitors events and transmits system inventory information to IBM on a periodic, client-defined timetable. The Electronic Service Agent automatically reports hardware problems to IBM. Early knowledge about potential problems enables IBM to deliver proactive service that may result in higher system availability and performance. In addition, information collected through the Service Agent is made available to IBM service support representatives when they help answer your questions or diagnose problems. Installation and use of IBM Electronic Service Agent for problem reporting enables IBM to provide better support and service for your IBM server.

**Variable charges:** The applicable processor-based one-time charge will be based on the group of the designated machine on which the program is licensed for use. If the program is designated to a processor in a group for which no charge is listed, the charge of the next higher group listed applies. For movement to a machine in a higher group, an upgrade charge equal to the difference in the then-current charges between the two groups will apply. For movement to a machine in a lower group, there will be no adjustment or refund of charges paid.

**IBM Global Financing**

IBM Global Financing offers competitive financing to credit-qualified customers to assist them in acquiring IT solutions. Offerings include financing for IT acquisition, including hardware, software, and services, from both IBM and other manufacturers or vendors. Offerings (for all customer segments: small, medium, and large enterprise), rates, terms, and availability can vary by country. Contact your local IBM Global Financing organization or visit

http://www.ibm.com/financing

IBM Global Financing offerings are provided through IBM Credit LLC in the United States, and other IBM subsidiaries and divisions worldwide to qualified commercial and government customers. Rates are based on a customer’s credit rating, financing terms, offering type, equipment type, and options, and may vary by country. Other restrictions may apply. Rates and offerings are subject to change, extension, or withdrawal without notice.

For more financing information, visit

http://www.ibm.com/financing

**Trade-marks**

System i, System p, System z, eServer and Electronic Service Agent are trade-marks of IBM Corporation in the United States, other countries, or both.

IBM, z/OS, DB2, z/Architecture, ibm.com, S/390, SystemPac, Parallel Sysplex and OS/390 are registered trade-marks of IBM Corporation in the United States, other countries, or both.

Linux is a registered trade-mark of Linus Torvalds in the United States, other countries, or both.
UNIX is a registered trade-mark of The Open Group in the United States and other countries.

Windows, Microsoft and Windows NT are registered trade-marks of Microsoft Corporation in the United States, other countries, or both.

Itanium is a registered trade-mark of Intel Corporation or its subsidiaries in the United States and other countries.

Other company, product, and service names may be trade-marks or service marks of others.

tm Trade-mark owned by International Business Machines Corporation and is used under license by IBM Canada Ltd.

® Registered trade-mark of International Business Machines Corporation and is used under license by IBM Canada Ltd.

(**) Company, product or service name may be a trade-mark or service mark of others.

Terms of use

IBM products and services which are announced and available in your country can be ordered under the applicable standard agreements, terms, conditions, and prices in effect at the time. IBM reserves the right to modify or withdraw this announcement at any time without notice. This announcement is provided for your information only. Additional terms of use are located at:
