At a glance

The IBM® BladeCenter® PS701 and PS702 Express® blades enable you to:

• Consolidate on BladeCenter blades and virtualize applications to better utilize resources and amplify the already significant advantages of BladeCenter efficiencies
• Simplify your deployment with flexible configurations that make it easy to implement the right system and the ability to run AIX®, IBM i, and Linux® operating systems simultaneously
• Take advantage of elegantly simple scalability that allows easy expansion and pay-as-you-grow flexibility for the utmost in investment protection, performance growth, and time to value
• Implement a highly secure, resilient infrastructure solution that can help drive cost down, reduce risk, improve energy efficiency, and enhance flexibility

Overview

Built on the proven foundation of the IBM BladeCenter family of products -- easy-to-use, integrated platforms with a high degree of deployment flexibility, energy efficiency, scalability and manageability -- the BladeCenter PS701 and PS702 Express are the premier blades for 64-bit applications. Minimize complexity, improve efficiency, automate processes, reduce energy consumption and scale easily: these are the benchmarks that matter on a smarter planet. The new POWER7™ processor-based PS blades automatically optimize performance and capacity at either a system or virtual machine level and benefit from the new POWER7 processor, which contains innovative technologies that help maximize performance and optimize energy efficiency. They represent one of the most flexible and cost-efficient solutions for UNIX®, i, and Linux deployments available in the market. Further enhanced by their ability to be installed in the same chassis with other IBM BladeCenter blade servers, the PS blades can deliver the rapid return on investment that clients and businesses demand.

Delivering on the promise for a highly dynamic infrastructure, the BladeCenter PS blades help in delivering superior business and IT services with agility and speed -- all in a simple to manage highly efficient way. The PS701 and PS702 Express blades have been preconfigured and tested by IBM and are based on proven technology. Utilizing a 3.0 GHz 64-bit POWER7 processor and available in an 8-core or 16-core configuration, they are optimized to achieve maximum performance for both the system and its virtual machines. Couple that performance with PowerVM™ which can...
be purchased for an extra charge, and you are now enabled for massive workload consolidation to drive maximum system utilization, predictable performance, and cost efficiency.

**Power is effortlessly balancing workload performance**

POWER7 Intelligent Threads technology enables workload optimization by selecting the most suitable threading mode: Single Thread (per core) or Simultaneous Multi Thread-2 or 4 modes. Consequently, Intelligent Threads technology can provide improved application performance. In addition, POWER7 processors can maximize cache access to cores, improving performance, using Intelligent Cache technology.

**Power is dynamic energy optimization**

EnergyScale™ Technology offers Intelligent Energy management features, which can dramatically and dynamically conserve power and further improve energy efficiency. These Intelligent Energy features enable the POWER7 processor to operate at a higher frequency if environmental conditions permit, for increased performance and performance per watt; or alternatively operate at a reduced frequency if user settings permit, for significant energy savings.

**Smart BladeCenter Solutions with Power® Blades**

If you are looking for the perfect alternative to replacing traditional rack servers, then look no further. With a range of available PS blade choices and BladeCenter chassis supported, you have the performance and scalability you need for demanding workloads of any sort. When combined with the BladeCenter S Chassis, the PS blades become an ideal solution for deploying blades in an office and distributed enterprise environment. Unlike a stand-alone server that needs multiple power supplies and fans, individual systems management, numerous cables, and a lot of space, IBM BladeCenter is compact and easy to use. By integrating servers, storage, networking, and management, BladeCenter is helping companies in every industry sweep complexity aside. The blades contain all the necessities to run an application-processors, memory, I/O and storage. The chassis contains shared redundant power, shared hot-swap cooling, a media tray, integrated Ethernet, storage, switching, and consolidated powerful management.

Simplify, Cut costs. Boost productivity. They are all priorities for IT, and they are all driving organizations to rethink their server strategies and become more receptive to new ways to use IT. Blades are the next-generation solution, promising improvements across the board. So toss your cables and take the leap. Migrate to the blade solution that uses less energy and gives more choices and control. You have nothing to lose but complexity. IBM BladeCenter is the right choice. Open. Easy.

**Key prerequisites**

- A BladeCenter chassis (BCH, BCHT, or BCS)
- A rack (7014-B42 recommended)
- An operating system (IBM AIX, IBM i operating system, Red Hat Linux, or Novell SUSE Linux)

**Planned availability date**

June 4, 2010
**IBM BladeCenter PS701 and PS702**

The BladeCenter PS701 and PS702 are the latest high-density blade servers with POWER7 and EnergyScale technology.

The BladeCenter PS701 is a single-wide blade with an 8-core 64-bit 3.0 GHz processor and 16 DIMM slots that can contain up to a maximum of 128 GB of memory. One optional 300 or 600 GB SAS SFF 2.5-inch hard disk can be installed in the PS701.

By adding feature number 8358, the BladeCenter PS701 is expanded into a double-wide BladeCenter blade, the PS702. feature number 8358 delivers an 8-core 64-bit 3.0 GHz processor, a second set of 16 DIMM slots, which increases the maximum memory to 256 GB. Two optional 300 or 600 GB SAS SFF 2.5-inch hard disks can be installed in the PS702.

Integrated features common to both the PS701 and PS702 include:

- Dual Gigabit Ethernet on PS701; Quad Gigabit Ethernet on PS702.
- SAS Controller.
- Service Processor.
- Two USB ports and one Serial over LAN (SOL) port.
- PS701 has one PCI-e CIOv expansion card slot and one PCI-e CFFh expansion card slot. PS702 has two PCI-e CIOv expansion card slots and two PCI-e CFFh expansion card slots.

As a heterogeneous infrastructure consolidation platform, the BladeCenter H, HT, and S Chassis also support running the PS701 and PS702 alongside your x86-based blades in the same chassis with independent monitoring, security, power, and systems management. With several Gigabit Ethernet, Fibre Channel, iSCSI, and 4x high-performance expansion cards using InfiniBand technology to choose from, the PS701 and PS702 can be tailored to the demands of your data center network and application workloads.

The BladeCenter S Chassis supports a maximum of six PS701 blades or a mix of PS701 blades and other blades. For the BladeCenter H Chassis, the maximum number of PS701 blades is 14; for the BladeCenter HT Chassis, the maximum number of PS701 blades is 12.

IBM i supports the BladeCenter S Chassis and BladeCenter H Chassis only. IBM i does not support the BladeCenter HT Chassis.

The PS701 and PS702 have autonomic power and thermal controls designed to maintain operation in out-of-specification situations. If thermal or power conditions become unacceptable, it may reduce the processor or memory performance capability to maintain acceptable conditions. When the conditions are restored to an acceptable value, the blade will again automatically resume normal operation. Some applications may be sensitive to these capability changes. Contact your application vendors to determine any possible impacts.

Full keyboard, video, and mouse support can be used at installation instead of Serial over LAN (SOL), which requires a network switch module in the chassis. Multiple console connections are also supported by simultaneously using the BladeCenter keyboard, video, and mouse, and an SOL connection. The Advanced Management Module (AMM) on the chassis controls the routing of keyboard inputs to one of up to 14 blade servers. An embedded video controller is used to support 2D graphics on an SVGA video display.

The PS701 and PS702 have two USB ports.
As a robust blade solution for 64-bit UNIX applications, the PS701 and PS702 also deliver leadership single-instruction, multiple-data (SMID) capabilities with the Linux operating system for scientific research and HPC.

PS701 and PS702 features and their potential benefits:

- Highly efficient and flexible design of IBM blade.
  - Densely pack more servers into a smaller space.
  - Tailor the system to meet varied business requirements with a choice of BladeCenter chassis.
  - Integrate networking switch infrastructure for improved cabling and data center maintenance.
  - Deploy in virtually any office environment for quieter, highly secure, and contaminant-protected operation.
- Pioneering IBM EnergyScale technology and Systems Director Active Energy Manager software designed to
  - Generate less heat by managing application utilization and server energy consumption.
  - Use less energy to cool the system.
- Industry-leading IBM PowerVM virtualization technology.
  - Reduce infrastructure costs by doing more with fewer servers.
  - Simplify IT operations to leverage storage, network, and computing resources to control costs and be more responsive.
- Innovative reliability features and systems management.
  - Expedite hardware repairs and reduce service time.
  - Enable scheduled maintenance with proactive monitoring of critical system components to help reduce unplanned failures.
- Choice of IBM AIX, IBM i, or Linux operating environment.
  - Standardize on a single platform that runs the large and varied portfolio of applications that support your business.

**PowerVM Editions (Advanced Power Virtualization) (Optional)**

The PS701 and PS702 support PowerVM technology. The PS701 and PS702 are designed to make it more affordable to consolidate multiple independent applications on a single blade using the same proven virtualization technologies offered on IBM Power servers.

The PS701 and PS702 support three optional leading-edge virtualization technologies:

**PowerVM Express Edition (5225), PowerVM Standard Edition (#5227), and PowerVM Enterprise Edition (#5228):**

- **PowerVM Express Edition** supports up to three partitions per system (VIOS, AIX, Linux, or IBM i) which share processors and I/O. No HMC is required or supported. It allows users to try out the Integrated Virtualization Manager (IVM) and the VIOS, which they would not get with an HMC.
- **PowerVM Standard Edition** makes the PS701 and PS702 an ideal platform for consolidation of IBM AIX, Linux, and IBM i operating system applications, helping clients reduce infrastructure complexity and cost. Offering an intuitive, Web-based interface for managing virtualization within a single blade, the Integrated Virtualization Manager (IVM) component of Virtual I/O Server (VIOS) allows the small business IT manager to quickly and easily set up and manage logical partitions (LPARs). It also enables Virtual I/O and Virtual Ethernet so that storage and communications adapters can be shared among all the LPARs running on the PS701 and PS702. Ultimately, IBM Micro-Partitioning™ technology allows each processor to be subdivided into as many as 10 virtual servers. And because the PS701 and PS702 are built with POWER7 technology, other advanced virtualization functions such as Shared Dedicated Capacity may be exploited.
• PowerVM Enterprise Edition includes all the features of PowerVM Standard Edition plus a new capability called Live Partition Mobility. Live Partition Mobility allows for the movement of a running AIX or Linux partition from one POWER7 processor-based server to another with no application downtime, resulting in better system utilization, improved application availability, and potential energy savings. With Live Partition Mobility, planned application downtime due to regular server maintenance can be a thing of the past. Software Maintenance for Virtual I/O Server (577x-PVE) must be purchased with VIOS (5765-PVE). PowerVM Enterprise Edition must be purchased separately.

Systems management and administrative tools

Integrated diagnostic and administrative tools like IBM Predicative Failure Analysis and light path diagnostics are designed to simplify administration to help lower costs and improve control of the IT environment. Remote management capabilities allow automating IT networking tasks. Proven technology like VIOS allows the sharing of disk drives, communications, and Fibre Channel adapters.

Systems management tools for the PS701 and PS702:

• AIX 5.3 or AIX 6.1: IBM Director V6.2, Cluster Systems Management (CSM) for AIX, V1.7, and Extreme Cloud Administrative Toolkit (xCAT) V2.
• SUSE Linux Enterprise Server (SLES) 10 Service Pack 3 for POWER, with current maintenance updates available from Novell to enable all planned functionality: IBM Director V6.2 and xCAT V2.
• Red Hat Enterprise Linux (RHEL) 5.5 for POWER, or later
• IBM Director V6.2
• IBM i 6.1 with i 6.1.1 machine code, or later, or IBM i 7.1, or later: IBM Director V6.2

IBM Director V6.2 must be downloaded at

xCAT is an open source scalable distributed computing management and provisioning tool that provides a unified interface for hardware control, discovery, and OS diskful/diskfree deployment. Highlights include:

• Client/server architecture
• Role-based administration
• Stateless and iSCSI support
• Scalability
• Automatic discovery
• Plug-in architecture
• Notification
• SNMP monitoring
• Centralized console and system logs
• Documentation

xCAT v2 can be downloaded at

CSM for AIX, V1.7 (5765-F67) provides a full suite of systems management software for the PS701 and PS702, including:

• Hardware control
• Installation and updating of software on nodes
• Distributed command execution
• File synchronization across a cluster
• Monitoring and automated response
• Automatic security configuration
• Management of node groups (static and dynamic)
• Diagnostics tools

More information on CSM and xCAT can be found at
http://www.ibm.com/systems/clusters/software/

**xCAT/IBM Director positioning**

xCAT is recommended for HPC computing customers for managing Linux clusters and has been enhanced to support the unique HPC requirements needed to integrate with other open source system management tools.

For general computing customers who operate non-HPC clustering infrastructures, IBM Systems Director and its family of products are IBM's strategic cross-platform system management solution.

**IBM BladeCenter PS701 and PS702 Express System**

• Form factor: The PS701 is a single-wide blade server and the PS702 is a double-wide blade server for BladeCenter S, BladeCenter H, or BladeCenter HT Chassis.
• Processor cores: The PS701 contains one 8-core 64-bit 3.0 GHz POWER7 processor and the PS702 contains two 8-core 64-bit 3.0 GHz POWER7 processors. Processors are not features. Processors contain AltiVec SIMD and Hardware Decimal Floating-Point acceleration.
• Level 2 (L2) cache: 256 KB per processor core.
• Level 3 (L3) cache: 4 MB per processor core.
• Memory (standard and maximum) Base offering: 16 GB (2 x 8 GB feature 8208 or 1 x 16 GB feature 8209) on the PS701 and 32 GB (4 x 8 GB feature 8208 or 2 x 16 GB feature 8209) on the PS702; up to 128 GB maximum per PS701 in 16 DIMM slots and up to 256 GB maximum per PS702 blade in 32 DIMM slots. ECC and Chipkill™ DDR3 SDRAM memory running at 1066 MHz (4 GB DIMMs) or 800 MHz (8 GB DIMMs).
• Internal drive storage maximums (optional)
  – PS701: One 300 or 600 GB 2.5-inch Serial Attached SCSI (SAS) 10,000 RPM non-hot-swappable disk drive.
  – PS702: Two 300 or 600 GB 2.5-inch SAS 10,000 RPM non-hot-swappable disk drives. Integrated RAID-0 or RAID-1 standard on blade server with support for disk mirroring.
• Networking: Integrated Virtual Ethernet adapter (IVE) Dual Gigabit and support for optional dual gigabit Ethernet daughter card.
• I/O upgrade: PS701 has one PCI-e CIOv expansion card slot and one PCI-e CFFh expansion card slot. The PS702 has two PCI-e CIOv expansion card slots and two PCI-e CFFh expansion card slots.
• Optional connectivity: 1 and 10 Gbps Ethernet, 4 and 8 Gbps Fibre Channel.
• PowerVM Express Edition: Supports up to three partitions per system that share processors and I/O.
• PowerVM Enterprise Edition: All the features of PowerVM Standard Edition plus Live Partition Mobility and Active Memory™ Sharing.
• Systems management: Integrated systems management processor, IBM Systems Director Active Energy Manager™, light path diagnostics, Predictive
• RAS features
  – IBM Chipkill ECC and cache Processor Instruction Retry
  – Service processor with fault monitoring
  – Hot-swappable disk bays (in BladeCenter S Chassis)
  – Hot-plug power supplies and cooling fans (on chassis)
  – Dynamic processor deallocation
  – Dynamic deallocation of logical partitions and PCI bus slots
  – Extended error handling on PCI-e slots
  – Redundant power supplies and cooling fans (on chassis)
• Operating environments:
  – AIX 5.3 with the 5300-12 Technology Level, or later
  – AIX V6.1 with the 6100-05 Technology Level, or later
  – IBM i 6.1 with i 6.1.1 machine code, or later
  – IBM i 7.1, or later
  – Novell SUSE Linux Enterprise Server 10 Service Pack 3 for POWER, with current maintenance updates available from Novell to enable all planned functionality.
  – Red Hat Enterprise Linux 5.5, for POWER, or later

  **Note:** Users should also update their systems with the latest Linux for Power service and productivity tools from IBM's Web site

  **Note:** For detailed installation instructions and I/O support information for IBM i, refer to the "Read Me First" and "Supported Environments" at
  http://www.ibm.com/systems/power/hardware/blades/ibmi.html

• High availability
  – IBM PowerHA™ SystemMirror for i

**Capacity Backup (CBU) support for IBM i on BladeCenter PS701 and PS702**

The CBU designation can help meet your requirements for a second system to use for backup, high availability, and disaster recovery. It enables you to temporarily transfer IBM i processor entitlements and IBM i user entitlements purchased for a primary machine to a secondary CBU system. Temporarily transferring these resources, instead of purchasing them for a secondary system, may result in significant savings.

The CBU specify feature 4898 for the BladeCenter PS701/PS702 (8406-71Y) is available as part of a new blade purchase. This CBU feature cannot be added to an existing blade server.

Certain system prerequisites must be met and system registration and approval is required before the CBU specify feature can be applied on a new server.

Standard IBM i terms and conditions do not allow either IBM i processor entitlements or IBM i user entitlements to be transferred permanently or temporarily. These entitlements remain with the machine they were ordered for. When you register the association between a primary and on-order CBU system, you must agree to certain terms and conditions regarding the temporary transfer. After a CBU system designation is approved and the system is installed, you can temporarily move your optional IBM i processor entitlement and user entitlements from the primary system to the CBU system for any purpose, provided the corresponding primary system processors are not being used concurrently for
Production purposes. The CBU system can therefore better support failover and role swapping for a full range of test, disaster recovery, and high availability scenarios.

Temporary entitlement transfer means that the entitlement is a property transferred from the primary system to the CBU system and may remain in use on the CBU as long as the registered primary and CBU systems are in deployment for the high availability or disaster recovery operation.

</tbody>
</table>

These systems have IBM i software licenses with an IBM i P05 or P10 processor group. The primary machine must be in the same enterprise and country as the CBU system.

Before you can temporarily transfer IBM i processor entitlements from the registered primary system, you must have more than one IBM i processor entitlement on the primary machine and at least one IBM i processor entitlement on the CBU server. You can then transfer any IBM i processor entitlements above the minimum one, assuming the total IBM i workload on the primary system does not require the IBM i entitlement that you want to transfer during the time of the transfer. During this temporary transfer, the CBU system's internal records of its total number of IBM i processor entitlements are not updated, and you may see IBM i license noncompliance warning messages from the CBU system. These warning messages in this situation do not mean you are not in compliance.

The PS701 and PS702 high availability options include PowerHA SystemMirror for i with Geographic Mirroring, iCluster®, and iClusterSMB. You may also use Metro Mirror or Global Mirror replication solutions provided by the storage subsystem as well as other third-party software replication packages.

Before you can temporarily transfer IBM i user entitlements, you must have more than 10 IBM i user entitlements on the PS701 or PS702 primary server and at least 10 IBM i user entitlements on the CBU server. You can then transfer any IBM i user entitlements above the minimum 10, assuming the total IBM i users on the primary system do not require the IBM i user entitlement you want to transfer during the time of the transfer.

For example, if you have a PS701 as your primary system with two IBM i processor entitlements (one above the minimum) and 50 IBM i user entitlements (40 above the minimum), you can temporarily transfer up to one IBM i processor entitlement and up to 40 user entitlements. During this temporary transfer, the CBU system's internal records of its total number of IBM i processor and user entitlements is not updated, and you may see IBM i license noncompliance warning messages from the CBU system.

If your primary or CBU machine is sold or discontinued from use, any temporary entitlement transfers must be returned to the machine on which they were originally acquired. For CBU registration and further details, visit

http://www.ibm.com/systems/power/hardware/cbu

N_Port ID Virtualization - NPIV: NPIV provides direct access to Fiber Channel adapters from multiple client partitions, simplifying the management of Fibre Channel SAN environments. NPIV support is included with PowerVM Express, Standard, and Enterprise Edition and supports AIX V5.3, AIX V6.1, IBM i 6.1.1, IBM i 7.1 hosted by VIOS 2.1.3.0, and SUSE Linux Enterprise Server 10 partitions on PS
POWER blades with an 8 Gb Fibre Channel Host Bus Adapter (HBA). Supported 8 Gb Fibre Channel HBAs are feature numbers 8240, 8242, and 8271.

The following levels of AIX and VIOS are required for NPIV on blades:

- AIX V5.3 with the 5300-12 Technology Level, or later
- AIX V5.3 with the 6100-05 Technology Level, or later
- VIOS 2.1.3.0, or later

See table for interoperability.

Support for BladeCenter PS701 and PS702 Express blades:

IBM i 6.1.1 and IBM i 7.1 support the scalable BladeCenter PS701 and PS702 blades. For IBM i, the BladeCenter PS701 and PS702 blades are supported in the BladeCenter S and BladeCenter H Chassis. These blades also support AIX and Linux operating systems.

IBM i uses the PowerVM VIOS partition for access to BladeCenter resources and storage devices. The VIOS partition owns adapters on the blade and virtualizes the resources to the IBM i partition.

IBM i supports the following I/O adapters and storage options on the BladeCenter PS701 and PS702:

- QLogic 8 Gb Fibre Channel Expansion Card (CIOv) for IBM BladeCenter (#8242)
- Emulex 8 Gb Fibre Channel Expansion Card (CIOv) for IBM BladeCenter (#8240)
- QLogic 4 Gb Fibre Channel Expansion Card (CIOv) for IBM BladeCenter (#8241)
- 3 Gb SAS Passthrough Expansion Card (CIOv) for IBM BladeCenter (#8246)
- QLogic Ethernet and 4 Gb Fibre Channel Expansion Card (CFFh) (#8252)
- QLogic 8 Gb Fibre Channel Expansion Card (CFFh) (#8271)
- QLogic 2-port 10 Gb Converged Network Adapter (CFFh) (#8275)
- IBM 300 GB SAS 10K SFF HDD (#8274)
- IBM 600 GB SAS 10K SFF HDD (#8276)

For use with IBM i, the blade can be deployed with one VIOS partition and one IBM i partition, with one VIOS partition and multiple IBM i partitions, or with one VIOS partition and a combination of IBM i, AIX, and Linux partitions. Integrated Virtualization Manager (IVM), a function of VIOS, is used to set up and manage the partitions.

IBM i 6.1 (5761-SS1) and IBM i 7.1 (5770-SS1) include per processor and per user entitlements for blade servers. When you select IBM i on a BladeCenter PS701 and PS702 blade, you must purchase at least one processor entitlement and at least 10 user entitlements. You may purchase additional IBM i processor entitlements up to a maximum of eight on the PS701 and up to 16 on the PS702 blade. Additional
IBM i user entitlements can also be purchased in blocks of 10 users. You may also purchase unlimited user, external user, and unlimited collaboration user options.

Support for virtual tape:

IBM i partitions on BladeCenter JS12, JS22, JS23, JS43, PS701, and PS702 blades support virtual tape, which simplifies backup and restore processing. IBM i can use native save/restore commands and BRMS to directly back up to a PowerVM VIOS attached LTO-4 tape drive, saving hardware costs and management time. This virtual tape support provides an effective backup solution for BladeCenter S configurations. It can also be used with BladeCenter H implementations. The virtual tape function supports the IBM Systems Storage SAS LTO-4 drive, specifically, the TS2240.

Tape backup with IBM i 6.1.1, or later, or IBM i 7.1, or later, partitions on BladeCenter JS12, JS22, JS23, JS43, PS701, and PS702 blades may also be done using N_Port ID Virtualization (NPIV) with Fiber Channel attached tape libraries. NPIV support is available for the following tape libraries: 3584 (TS3500), 3573 (TS3100 and TS3200), 3576 (TS3310), and 3577 (TS3400). NPIV is provided via 8 Gb Fibre Channel Adapters:

- QLogic 8 Gb Fibre Channel Expansion Card (CFFh) (#8271)
- QLogic 8 Gb Fibre Channel Expansion Card (CIOv) for IBM BladeCenter (#8242)
- Emulex 8 Gb Fibre Channel Expansion Card (CIOv) for IBM BladeCenter (#8240)

Support for BladeCenter S SAS RAID Controller Module:

The BladeCenter S SAS RAID Controller Module is supported with POWER7 processor-based blades in addition to x86 processor-based blades with the BladeCenter S Chassis. This controller module provides additional protection options for BladeCenter S storage, providing:

- Support for RAID 0, 1, 10, and 5
- Support for two disk storage modules with up to 12 SAS drives
- Support for an external SAS tape drive
- Support for 3 Gb SAS Passthrough Expansion Card (CIOv) for IBM BladeCenter (#8246) for PS701 and PS702 blades
- 1 GB of battery-backed write cache between the two modules

Two SAS RAID Controller Modules are required with the BladeCenter S. For environments with high performance demands, separate RAID sets are recommended for each IBM i partition and for x86 blades. The controller is supported with BladeCenter JS12, JS22, JS23, JS43, PS701, and PS702 blades running AIX, Linux, and VIOS partitions, including a VIOS partition that virtualizes I/O resources for IBM i 6.1 partitions.

Accessibility by people with disabilities

A U.S. Section 508 Voluntary Product Accessibility Template (VPAT) containing details on accessibility compliance can be requested at

Statement of general direction

In addition to supporting SLES 10 SP3, Novell plans to support the IBM BladeCenter PS700, PS701, and PS702 with an upcoming SLES 11 service pack, targeted for availability during second quarter 2010. For additional questions on the availability of this release, contact Novell.

In addition to supporting RHEL 5, with update 5.5, Red Hat plans to support POWER7 in Red Hat’s upcoming version, Red Hat Enterprise Linux 6, with the
Power 750, 755, 770, and 780 models and the IBM BladeCenter PS700, PS701, and PS702. For additional questions or to be part of the Red Hat Enterprise Linux 6 beta program, contact Red Hat.

IBM plans to enable support for Active Memory Expansion capability on POWER7 based blade servers with the IBM AIX operating system.

All statements regarding IBM's future direction and intent are subject to change or withdrawal without notice, and represent goals and objectives only. Any reliance on these Statements of Direction is at the relying party's sole risk and will not create liability or obligation for IBM.

The information on the new product is intended to outline our general product direction and it should not be relied on in making a purchasing decision. The information on the new product is for informational purposes only and may not be incorporated into any contract. The information on the new product is not a commitment, promise, or legal obligation to deliver any material, code, or functionality. The development, release, and timing of any features or functionality described for our products remains at our sole discretion.

### Product number

The following are newly announced features on the specific models of the IBM Power Systems™ 8406 machine type:

Feature conversions

The existing components being replaced during a model or feature conversion become the property of IBM and must be returned.

Feature conversions are always implemented on a "quantity of one for quantity of one" basis. Multiple existing features may not be converted to a single new feature. Single existing features may not be converted to multiple new features.

The following conversions are available to customers:

Publications

No publications are shipped with the announced product.

The IBM Systems Information Center provides you with a single information center where you can access product documentation for IBM systems hardware, operating systems, and server software. Through a consistent framework, you can efficiently find information and personalize your access. The IBM Systems Information Center is at

IBM Publications Center Portal

http://www.ibm.com/shop/publications/order

The Publications Center is a worldwide central repository for IBM product publications and marketing material with a catalog of 70,000 items. Extensive search facilities are provided, as well as payment options via credit card. A large number of publications are available online in various file formats, which can currently be downloaded free of charge.

Services

Global Technology Services

IBM services include business consulting, outsourcing, hosting services, applications, and other technology management.
These services help you learn about, plan, install, manage, or optimize your IT infrastructure to be an On Demand Business. They can help you integrate your high-speed networks, storage systems, application servers, wireless protocols, and an array of platforms, middleware, and communications software for IBM and many non-IBM offerings. IBM is your one-stop shop for IT support needs.

For details on available services, contact your IBM representative or visit

http://www.ibm.com/services/

For details on available IBM Business Continuity and Recovery Services, contact your IBM representative or visit

Technical information

Specified operating environment

Physical specifications

- **PS701**
  - Height: 9.65 in (245 mm)
  - Width: 1.14 in (29 mm)
  - Depth: 17.55 in (445 mm)
  - Weight: 9.6 lb (4.35 kg)
- **PS702**
  - Height: 9.65 in (245 mm)
  - Width: 2.32 in (59 mm)
  - Depth: 17.55 in (445 mm)
  - Weight: 19.2 lb (8.7 kg)
- **BladeCenter H Chassis**
  - Height: 15.75 in (400 mm)
  - Width: 17.5 in (444 mm)
  - Depth: 28.0 in (711 mm)
  - Weight: 350 lb (159 kg)
- **BladeCenter S Chassis**
  - Height: 12.0 in (306 mm)
  - Width: 17.5 in (444 mm)
  - Depth: 28.3 in (733 mm)
  - Weight: 240 lb (108.9 kg)

To assure installability and serviceability in non-IBM industry-standard racks, review the installation planning information for any product-specific installation requirements.

Operating environment

- Temperature:
  - 10° to 35° C (50° to 95° F) at 0 to 914 m (0 to 3,000 ft)
- 10° to 32° C (50° to 90° F) at 914 to 2,133 m (3,000 to 7,000 ft)
- Relative humidity: 8% to 80%
- Maximum altitude: 2,133 m (7,000 ft)
- Power consumption (at +12 V supplied by BladeCenter chassis): 350 watts maximum

**Note:** The maximum measured value is the worst case power consumption expected from a fully populated server under an intensive workload. The maximum measured value also accounts for component tolerance and non-ideal operating conditions. Power consumption and heat load vary greatly by server configuration and utilization. The IBM Systems Energy Estimator should be used to obtain a heat output estimate based on a specific configuration

http://www-912.ibm.com/see/EnergyEstimator

**EMC conformance**
- U.S.: FCC - Verified to comply with Part 15 of the FCC Rules Class A
- Canada: ICES-004, issue 3 Class A
- EMEA: EN55022: 2006 Class A
- Australia and New Zealand: CISPR 22, Class A

**Safety certifications**
- U.S.: (UL Mark) UL 60950-1 1st Edition
- CAN: (cUL Mark) CAN/CSA22.2 No.60950-1 1st Edition
- Europe: (CE Mark) EN60950-1, 1st Edition
- CB: IEC60950-1, 1st Edition
- Russia: (GOST Mark) IEC60950-1

The Serial over LAN (SOL) function routes the console data stream over the standard dual 1 Gb Ethernet ports to the chassis AMM.

**Minimum system configuration**

Each 8406-71Y configuration must contain a minimum of:

- 16 GB (PS701) or 32 GB (PS702) of memory:
  - 2 x 8 GB (2 x 4 GB DIMMs) DDR3 1066 MHz (#8208) or 1 x 16 GB (2 x 8 GB DIMMs) DDR3 800 MHz (#8209) for the PS701
  - 4 x 8 GB (2 x 4 GB DIMMs) DDR3 1066 MHz (#8208) or 2 x 16 GB (2 x 8 GB DIMMs) DDR3 800 MHz (#8209) for the PS702
- Eight or 16 Processor Entitlements (one of these):
  - 8 x #8411, or 4 x #8411 and 4 x #8412 for the PS701
  - 16 x #8411, or 8 x #8411 and 8 x #8412 with #8358 for the PS702
**Note:** Feature 8412 is part of Express Product Offerings.

- 1-Wide Add-on SMP Chassis (#8358) required for PS702

**Notes:** PowerVM Express Edition (8 or 16 x #5225) will be included in the base configuration. Either PowerVM Standard Edition (8 or 16 x #5227) or PowerVM Enterprise Edition (8 or 16 x #5228) may be substituted for PowerVM Express Edition. PowerVM is not required and may be removed from the order. If the IBM i operating system is installed on the PS701/PS702, a PowerVM edition is required.

**Note:**

- A minimum of one copy of the IBM BladeCenter PS701/PS702 Service/Warranty CDs (Multi-language) (#8912) and one copy of the PS701/PS702 Installation and User’s Guide (#8900-8911, 8913-8914) is required at each customer installation.

**Express Product Offerings**

If you order a PS701 or PS702 server Express Product Offering, as defined here, you may qualify for a processor entitlement at no additional charge. A minimum of 32 GB of memory and one SAS 10 K SFF disk drive on the PS701 and a minimum of 64 GB of memory and one SAS 10 K SFF disk drive on the PS702 is required to determine if you are entitled to a processor entitlement at no additional charge.

You can make changes to the standard features as needed and still qualify for processor entitlements at no additional charge. However, selection of total memory smaller than the totals defined as the minimums disqualifies the order as an Express Product Offering.

**BladeCenter PS701**

- Minimum 32 GB memory -- one of these:
  - Four - 8 GB (2 x 4 GB DIMMs) DDR3 1066 MHz (#8208)
  - Two - 16 GB (2 x 8 GB DIMMs) DDR3 800 MHz (#8209)

  **Note:** Additional memory DIMMs of any size may be added.

- One of these:
  - One - 300 GB SAS 10K SFF HDD (#8274)
  - One - 600 GB SAS 10K SFF HDD (#8276)
- Four - Processor Entitlements (#8411).
- Four - Zero-priced Processor Entitlements (#8412); receive four processor entitlements (#8412) at no additional charge. Eight cores are entitled.

**BladeCenter PS702**

- 1-Wide Add-on SMP Chassis (#8358).
- Minimum 64 GB memory -- one of these:
  - Eight - 8 GB (2 x 4 GB DIMMs) DDR3 1066 MHz (#8208)
  - Four - 16 GB (2 x 8 GB DIMMs) DDR3 800 MHz (#8209)

  **Note:** Additional memory DIMMs of any size may be added.

- One of these:
  - One - 300 GB SAS 10K SFF HDD (#8274)
  - One - 600 GB SAS 10K SFF HDD (#8276)
- Eight - Processor Entitlements (#8411).
• Eight - Zero-priced Processor Entitlements (#8412); receive eight processor entitlements (#8412) at no additional charge. Sixteen cores are entitled.

**Note:** A minimum of one copy of the IBM BladeCenter PS701/PS702 Service/Warranty CDs (Multi-language) (#8912) and one copy of the PS701/PS702 Installation and User's Guide (#8900-8911, 8913-8914) is required at each customer installation.

**Optional and additional features**

• Up to 128 GB of system memory on the PS701; up to 256 GB of system memory on the PS702
  - The PS701 system board contains 16 RDIMM memory connections, and the PS702 system board contains an additional 16 RDIMM memory connections.
  - Memory DIMMs must be installed in matched pairs (same size and speed) with a minimum of 16 GB and maximum of 128 GB on the PS701 and a minimum of 32 GB and a maximum of 256 GB on the PS702.
  - Memory sizes can be mixed.
  - PS701/PS702 supports Memory Scrubbing, ECC, and Chipkill.
  - The 8 GB (2 x 4 GB DIMMS) memory feature operates at 1066 MHz while the 16 GB (2 x 8 GB DIMMs) memory feature operates at 800 MHz.

• Storage devices
  - The PS701/PS702 does not support removable media within the blade.
  - PS701 has one location for installation of a 2.5-inch SAS SFF HDD.
  - PS702 has two locations for installation of one or two 2.5-inch SAS SFF HDDs.
  - Drives may be selected in any combination. However, if RAID 1 is to be implemented, the drives must be of the same size.

**Expansion cards**

The PS701 has one PCI-e CIOv expansion card slot and one PCI-e CFFh expansion card slot. The PS702 has two PCI-e CIOv expansion card slots and two PCI-e CFFh expansion card slots.

CFFh expansion cards include:

• QLogic Ethernet and 4 GB Fibre Channel Expansion Card (CFFh) (#8252)
  - Note: Not supported in the BladeCenter S Chassis (7779-BCS)
• 4x DDR Expansion Card (CFFh) for IBM BladeCenter (#8258)
• QLogic Ethernet and 8 Gb Fibre Channel Expansion Card (CFFh) (#8271)
• QLogic 2-port 10 Gb Converged Network Adapter (CFFh) (#8275)

CIOv expansion cards include:

• Emulex 8 Gb Fibre Channel Expansion Card (CIOv) (#8240).
• QLogic 4 Gb Fibre Channel Expansion Card (CIOv) for IBM BladeCenter (#8241).
• QLogic 8 Gb Fibre Channel Expansion Card (CIOv) (#8242).
• 3 Gb SAS Passthrough Expansion Card (CIOv) for IBM BladeCenter (#8246).

**Note:** IBM i does not support Fibre Channel adapter feature numbers 8252, 8240, 8241, and 8242 when used in the BladeCenter S Chassis.

**Software requirements**

The PS701 and PS702 servers support the IBM AIX, Linux, and IBM i operating systems, providing the flexibility of using applications written for any one of the three. IBM has qualified two popular Linux distributions for use with the PS701 and PS702 servers:
• Red Hat Enterprise Linux for POWER
• Novell SUSE Linux Enterprise Server for POWER

One or more of the following operating systems is required for an operational PS701/PS702:

If installing the AIX operating system (one of these):
• AIX V5.3 with the 5300-12 Technology Level, or later
• AIX V6.1 with the 6100-05 Technology Level, or later

If installing the IBM i operating system:
• IBM i 6.1 with i 6.1.1 machine code, or later
• IBM i 7.1, or later

**Note:** VIOS is required with the IBM i operating system.

If installing VIOS:
• VIOS 2.1.3.0, or later

If installing the Linux operating system (one of these):
• SUSE Linux Enterprise Server 10 Service Pack 3 for POWER, or later, with current maintenance updates available from Novell to enable all planned functionality
• Red Hat Enterprise Linux 5.5 for POWER, or later

Users should also update their systems with the latest Linux for Power service and productivity tools available at

**Note:** For systems ordered with the Linux operating system, IBM ships the most current versions available from the distributor. If your hardware requires a different version of a Linux OS than that shipped by IBM, you must obtain it via download from the Linux distributor's Web site. Information concerning access to a distributor's Web site is located on the product registration card delivered to you as part of your Linux OS order.

Processor is the unit of measure by which this program is licensed. A processor (commonly called a processor core or CPU) is a functional unit within a computing device that interprets and executes instructions. A processor consists of at least an instruction control unit and one or more arithmetic or logic unit. With multi-core technology, each core is considered a processor. For programs eligible for sub-capacity licensing, a Proof of Entitlement (PoE) must be acquired for all activated processors available for use in each partition (utilizing eligible partitioning technologies) where the program runs. A Proof of Entitlement (PoE) must be acquired for all activated processor cores available for use on the server.

Disclaimer: Some information in this announcement addresses anticipated future capabilities and may be subject to change.

**Planning information**

**Cable orders**
No cables are required.

**Security, auditability, and control**

Security and auditability features include:
• A power-on password function provides control of who has access to the data and server setup program on the server.
• A selectable boot sequence can be used to prevent unauthorized installation of software or removal of data from the diskette drive.

Limitations:

The BladeCenter and PS701 and PS702 blade have no security-intrusion detection.

The customer is responsible for evaluation, selection, and implementation of security features, administrative procedures, and appropriate controls in application systems and communications facilities.

Global Technology Services

Contact your IBM representative for the list of selected services available in your country, either as standard or customized offerings, for the efficient installation, implementation, or integration of this product.

IBM Electronic Services

IBM has transformed its delivery of hardware and software support services to help you achieve higher system availability. Electronic Services is a Web-enabled solution that offers an exclusive, no-additional-charge enhancement to the service and support available for IBM servers. These services are designed to provide the opportunity for greater system availability with faster problem resolution and preemptive monitoring. Electronic Services comprises two separate, but complementary, elements: Electronic Services news page and Electronic Services Agent.

The Electronic Services news page is a single Internet entry point that replaces the multiple entry points traditionally used to access IBM Internet services and support. The news page enables you to gain easier access to IBM resources for assistance in resolving technical problems.

The Electronic Service Agent™ is no-additional-charge software that resides on your server. It monitors events and transmits system inventory information to IBM on a periodic, client-defined timetable. The Electronic Service Agent automatically reports hardware problems to IBM. Early knowledge about potential problems enables IBM to deliver proactive service that may result in higher system availability and performance. In addition, information collected through the Service Agent is made available to IBM service support representatives when they help answer your questions or diagnose problems. Installation and use of IBM Electronic Service Agent for problem reporting enables IBM to provide better support and service for your IBM server.

Terms and conditions

Volume orders: Contact your IBM representative.

Warranty period

Three years

Warranty service

If required, IBM provides repair or exchange service depending on the types of limited warranty service specified for the machine. An IBM technician will attempt to
resolve your problem over the telephone, or electronically via an IBM Web site. You must follow the problem determination and resolution procedures that IBM specifies. Scheduling of service will depend upon the time of your call and is subject to parts availability. If applicable to your product, parts considered Customer Replaceable Units (CRUs) will be provided as part of the machine's standard limited warranty service.

Service levels are response time objectives and are not guaranteed. The specified level of limited warranty service may not be available in all worldwide locations. Additional charges may apply outside IBM’s normal service area. Contact your local IBM representative or your reseller for country- and location-specific information.

This product is covered by the following types of service: Customer Replaceable Unit Service and On-site for other selected parts.

Customer Replaceable Unit Service: IBM provides replacement CRUs to you for you to install. CRU information and replacement instructions are shipped with your machine and are available from IBM upon your request. CRUs are designated as being either a Tier 1 or a Tier 2 CRU.

Tier 1 CRU: Installation of Tier 1 CRUs is your responsibility. If IBM installs a Tier 1 CRU at your request, you will be charged for the installation. For machines with on-site same-day response service, IBM will replace a Tier 1 CRU at your request, at no additional charge.

Tier 2 CRU: You may install a Tier 2 CRU yourself or request IBM to install it, at no additional charge.

Based upon availability, CRUs will be shipped for next-business-day delivery. IBM specifies, in the materials shipped with a replacement CRU, whether a defective CRU must be returned to IBM. When return is required, 1) return instructions and a container are shipped with the replacement CRU and 2) you may be charged for the replacement CRU if IBM does not receive the defective CRU within 15 days of your receipt of the replacement.

The following parts have been designated as Tier 1 CRU parts:

- Hard disk drive
- Daughter cards
- Battery
- Bezel
- Memory DIMMs
- Top cover

On-site Service: IBM will repair the failing machine at your location and verify its operation. You must provide a suitable working area to allow disassembly and reassembly of the IBM machine. The area must be clean, well lit, and suitable for the purpose.

- IBM onsite Repair Limited, 9 hours per day, Monday through Friday, excluding public or national holidays, next-business-day response, Latest Call Registration 15:00.

Non-IBM part support

**Limited warranty service:** IBM is now shipping machines with selected non-IBM parts that contain an IBM field replaceable unit (FRU) part number label. These parts are to be serviced during the IBM machine limited warranty period. IBM is covering the service on these selected non-IBM parts as an accommodation to their customers, and normal limited warranty service procedures for the IBM machine apply.

**Limited warranty service upgrades:** During the limited warranty period, limited warranty service upgrades provide an enhanced level of On-site Service for an
additional charge. A limited warranty service upgrade must be purchased during the limited warranty period and is for a fixed term (duration). It is not refundable or transferable and may not be prorated. If required, IBM will provide the limited warranty service upgrade enhanced level of On-site Service acquired by the customer. Service levels are response time objectives and are not guaranteed.

IBM will attempt to resolve your problem over the telephone or electronically by access to an IBM Web site. You must follow the problem determination and resolution procedures that IBM specifies. Scheduling of service will depend upon the time of your call and is subject to parts availability.

On-site Service: IBM will repair the failing machine at your location and verify its operation. You must provide a suitable working area to allow disassembly and reassembly of the IBM machine. The area must be clean, well-lit, and suitable for the purpose. The following service selections are available as limited warranty upgrades for your machine.

• IBM On-site Repair, Same Business Day Onsite Response Time, Latest Call Registration 12:00, 9 hours per day, Monday through Friday, excluding public or national holidays
• IBM On-site Repair, Same Business Day 6 hours average Onsite Response Time, 24 hours per day, Monday through Sunday, 365 days a year

Customer Replaceable Units (CRUs) may be provided as part of the machine’s standard limited warranty CRU Service except that you may install a CRU yourself or request IBM installation, at no additional charge, under one of the On-site Service levels specified above. For additional information on the CRU Service, see limited warranty information.

Maintenance services

If required, IBM provides repair or exchange service depending on the types of maintenance service specified for the machine. IBM will attempt to resolve your problem over the telephone or electronically, via an IBM Web site. You must follow the problem determination and resolution procedures that IBM specifies. Scheduling of service will depend upon the time of your call and is subject to parts availability. Service levels are response-time objectives and are not guaranteed.

CRU Service

If your problem can be resolved with a CRU (for example, memory or hard disk drive), IBM will ship the CRU to you for you to install. CRU information and replacement instructions are shipped with your machine and are available from IBM at any time on your request.

IBM specifies in the materials shipped with a replacement CRU whether a defective CRU must be returned to IBM. When return is required, return instructions and a container are shipped with the replacement CRU, and you may be charged for the replacement CRU if IBM does not receive the defective CRU within 15 days of your receipt of the replacement.

On-site Service

IBM will repair the failing machine at your location and verify its operation. You must provide a suitable working area to allow disassembly and reassembly of the IBM machine. The area must be clean, well-lit, and suitable for the purpose.

• IBM On-site Repair Limited, Next Business Day Onsite Response Time, Latest Call Registration 15:00, 9 hours per day, Monday through Friday, excluding public or national holidays.
• IBM Onsite Repair, Next Business Day Onsite Response Time, 9 hours per day, Latest Call Registration 15:00, Monday through Friday, excluding public or national holidays.
• IBM On-site Repair, Same Business Day Onsite Response Time, Latest Call Registration 12:00, 9 hours per day, Monday through Friday, excluding public or national holidays.
• IBM On-site Repair, Same Business Day 6 hours average Onsite Response Time, 24 hours per day, Monday through Sunday, 365 days a year.

Maintenance service (ICA)

Maintenance services are available for ICA legacy contracts.

Alternative service (limited warranty service upgrades)

During the limited warranty period, a limited warranty service upgrade provides an enhanced level of On-site Service for an additional charge. A limited warranty service upgrade must be purchased during the limited warranty period and is for a fixed term (duration). It is not refundable or transferable and may not be prorated. If required, IBM will provide the limited warranty service upgrade enhanced level of On-site Service acquired by the customer. Service levels are response-time objectives and are not guaranteed.

IBM will attempt to resolve your problem over the telephone or electronically by access to an IBM Web site. You must follow the problem determination and resolution procedures that IBM specifies. Scheduling of service will depend upon the time of your call and is subject to parts availability.

A CRU will be provided as part of the machine's standard limited warranty CRU Service except that you may install a Tier 1 CRU yourself or request IBM to install it, at no additional charge, under the type of limited warranty service specified below, On-site Service.

IBM will repair the failing machine at your location and verify its operation. You must provide a suitable working area to allow disassembly and reassembly of the IBM machine. The area must be clean, well-lit, and suitable for the purpose.

See the Prices section for specific offerings.

Maintenance service

If required, IBM provides repair or exchange service depending on the type of maintenance service specified below for the machine. IBM will attempt to resolve your problem over the telephone or electronically by access to an IBM Web site. You must follow the problem determination and resolution procedures that IBM specifies. Scheduling of service will depend upon the time of your call and is subject to parts availability. Service levels are response-time objectives and are not guaranteed.

Customer Replaceable Unit (CRU) Service

If your problem can be resolved with a CRU (for example, memory or hard disk drive). IBM will ship the CRU to you for you to install. CRU information and replacement instructions are shipped with your machine and are available from IBM upon your request.

Based upon availability, CRUs will be shipped for next-business-day delivery. IBM specifies, in the materials shipped with a replacement CRU, whether a defective CRU must be returned to IBM. When return is required, 1) return instructions and a container are shipped with the replacement CRU and 2) you may be charged for the replacement CRU if IBM does not receive the defective CRU within 15 days of your receipt of the replacement.

See the Prices section for specific offerings.
Non-IBM parts support

Limited warranty service

IBM is now shipping machines with selected non-IBM parts that contain an IBM field replaceable unit (FRU) part number label. These parts are to be serviced during the IBM machine limited warranty period. IBM is covering the service on these selected non-IBM parts as an accommodation to their customers, and normal limited warranty service procedures for the IBM machine apply.

International Warranty Service

International Warranty Service (IWS) is available in selected countries or regions.

The warranty service type and the service level provided in the servicing country may be different from that provided in the country in which the machine was purchased.

Under IWS, warranty service will be provided with the prevailing warranty service type and service level available for the IWS-eligible machine type in the servicing country and the warranty period observed will be that of the country in which the machine was purchased. To determine the eligibility of your machine and to view a list of countries where service is available, visit

For more information on IWS, refer to Services Announcement ZS01-0168, dated September 25, 2001.

Limited warranty service upgrades and maintenance services

Under certain conditions, IBM Integrated Technology Services repairs selected non-IBM parts at no additional charge for machines that are covered under limited warranty service upgrades or maintenance services.

IBM Service provides hardware problem determination on non-IBM parts (for example, adapter cards, PCMCIA cards, disk drives, or memory) installed within IBM machines covered under limited warranty service upgrades or maintenance services and provides the labor to replace the failing parts at no additional charge.

If IBM has a Technical Service Agreement with the manufacturer of the failing part, or if the failing part is an accommodations part (a part with an IBM FRU label), IBM may also source and replace the failing part at no additional charge. For all other non-IBM parts, customers are responsible for sourcing the parts. Installation labor is provided at no additional charge, if the machine is covered under a limited warranty service upgrade or a maintenance service.

Warranty service upgrades

Usage plan machine

No

IBM hourly service rate classification

Two

When a type of service involves the exchange of a machine part, the replacement may not be new, but will be in good working order.

Field-installable features

Yes
Model conversions
No

Machine installation
Customer setup. Customers are responsible for installation according to the instructions IBM provides with the machine.

Graduated program license charges apply
Yes
The applicable processor tier is small.

Licensed machine code
IBM Machine Code is licensed for use by a customer on the IBM machine for which it was provided by IBM under the terms and conditions of the IBM License Agreement for Machine Code, to enable the machine to function in accordance with its specifications, and only for the capacity authorized by IBM and acquired by the customer. You can obtain the agreement by contacting your IBM representative or visiting

Machine using LMC Type Model 8406-71Y

IBM may release changes to the Machine Code. IBM plans to make the Machine Code changes available for download from the IBM technical support Web site

If the machine does not function as warranted and your problem can be resolved through your application of downloadable Machine Code, you are responsible for downloading and installing these designated Machine Code changes as IBM specifies. If you would prefer, you may request IBM to install downloadable Machine Code changes; however, you may be charged for that service.

IBM Global Financing
IBM Global Financing offers competitive financing to credit-qualified customers to assist them in acquiring IT solutions. Offerings include financing for IT acquisition, including hardware, software, and services, from both IBM and other manufacturers or vendors. Offerings (for all customer segments: small, medium, and large enterprise), rates, terms, and availability can vary by country. Contact your local IBM Global Financing organization or visit

http://www.ibm.com/financing
IBM Global Financing offerings are provided through IBM Credit LLC in the United States, and other IBM subsidiaries and divisions worldwide to qualified commercial and government customers. Rates are based on a customer's credit rating, financing terms, offering type, equipment type, and options, and may vary by country. Other restrictions may apply. Rates and offerings are subject to change, extension, or withdrawal without notice.

Financing solutions from IBM Global Financing can help you stretch your budget and affordably acquire the new product. But beyond the initial acquisition, our end-to-end approach to IT management can also help keep your technologies current, reduce costs, minimize risk, and preserve your ability to make flexible equipment decisions throughout the entire technology life cycle.
