Overview

Four new feed handlers are added to the WebSphere® Front Office portfolio. These feed handlers can help address customer requirements for high-throughput, low-latency connectivity to major North American and European exchange feeds. Each of these feed handlers is designed to deliver the high performance and quality of service associated with the WebSphere Front Office platform. WebSphere Front Office for Financial Markets offers a robust market data platform that can provide ultra-low-latency connectivity to exchanges and electronic markets.

The following new feed handlers for WebSphere Front Office for Financial Markets are now available:

- WebSphere Front Office Feed Handler for Eurex EBS Level 2
- WebSphere Front Office Feed Handler for LSE Level 1
- WebSphere Front Office Exchange Feed Handler for NASDAQ OMX Europe Trade Feed
- WebSphere Front Office Order Book Feed Handler for NYSE OpenBook Ultra

Planned availability date

March 31, 2009 (electronic software delivery)

Availability of programs with encryption algorithm in France is subject to French government approval.

Cryptography in this product is limited to password encryption, authentication or digital signature.

Charge metrics definitions

per Feed

The term "Feed" refers to a stream of machine-readable information that is supplied to the program by an external entity. A Feed may include a redundant stream of incoming machine-readable information. A "Feed Handler" is a program component that handles a particular Feed. In determining the number of PoEs required for Feeds Handlers, if:

- A particular Feed is bidirectional between an external entity and the program, then a single Feed Handler PoE is required.
- A particular Feed is fed as separate streams of machine-readable information, then a separate Feed Handler PoE for each stream is required.
