IBM Lotus Notes and Domino 6.5 family of products, including IBM Lotus Enterprise Integrator for Domino, maximizes collaboration while lowering cost

Overview
With Release 6.5 of the IBM Lotus Notes® and Domino™ family of products, including IBM Lotus Enterprise Integrator™ for Domino (LEI), Lotus® continues to deliver proven world-class messaging and collaboration, within a rich workplace experience. Lotus Notes and Domino 6.5 bring together all elements necessary to maximize collaboration and human interaction. This helps reduce total cost of ownership, while delivering best-of-breed reliability, productivity, reusability, flexibility, and market-leading security.

Key prerequisites
Refer to the Hardware requirements and Software requirements sections.

Planned availability dates
- September 30, 2003: Electronic software delivery
- November 7, 2003: Media and documentation

At a glance
Helping companies maintain a competitive advantage, this latest release:

- Gives users a single access point to their most valuable messaging, collaborative, and personal information management (PIM) through the new Lotus Workplace for Notes® Welcome Page
- Integrates Lotus Instant Messaging functionality to provide presence awareness and enable users to initiate chats with colleagues — without launching a separate application
- Maximizes responsiveness through a follow-up function and visual indicators to show users when they’ve forwarded or replied to e-mail messages
- Helps reduce total cost of ownership through minimal training requirements, end-user productivity enhancements, and built-in management function
- Expands platform support by adding Linux support
- Advances server management and system administration, helping reduce total cost of ownership
- Enhances application development support with Lotus Domino Toolkit for WebSphere® Studio

For ordering, contact:
Your IBM representative, an IBM Business Partner, or the Americas Call Centers at 800-IBM-CALL
Reference: YE001

This announcement is provided for your information only. For additional information, contact your IBM representative, call 800-IBM-4YOU, or visit the IBM home page at: http://www.ibm.com.
The IBM Lotus Notes and Domino 6.5 family of products focuses on the theme of maximizing collaboration and user productivity while lowering total cost of ownership. As they have since their inception, Lotus Notes and Domino continue to offer high performance with reliability, reusability, security, and flexibility, for companies of all sizes and across all industries. With each release update, Lotus continues to meet your needs to help you maintain a competitive advantage.

**IBM Lotus Notes 6.5: Reducing TCO with enhanced user productivity**

- **Lotus Instant Messaging integration** — Instant messaging functionality has been incorporated into Notes 6.5, providing presence awareness and the ability for users to open a chat session with other Lotus Instant Messaging (Sametime®) users without separately launching the Lotus Instant Messaging application. Users can increase productivity through the ability to instantly collaborate with colleagues, while remaining within the context of a specific task.

- **Lotus Workplace for Notes** — New in Notes 6.5, the Welcome page can be presented as a Workplace — offering streamlined access to all of your business-critical information sources. Workplace for Notes offers a single point of integration for the tools users work with, the tasks users work on, as well as the people users collaborate with. End users benefit from an innovative collaborative workspace, which provides quick and easy access to multiple information sources.

- **Follow-up flags** — Users can mark entries in their mail with a follow-up flag. The follow-up flag allows users to indicate to themselves that there is further action to be taken, helping to maximize responsiveness to incoming requests.

- **Replied to and/or forwarded indicators** — This provides a way for users to easily determine whether they have responded to or forwarded a particular e-mail. Icon indicators are provided at the view level, and an iconic indicator in the note header of an e-mail shows that a reply or forward has already occurred. This helps users to maximize responsiveness to e-mail and to more efficiently manage the information and tasks in their inbox.

- **Block sender mail rule** — This allows users to add a specified sender to a block sender list so that future messages from that address are blocked from displaying in the inbox view. Future mail from this sender will be automatically moved to the Junk Mail view. Users can potentially benefit from less junk mail in their inbox, helping them to more quickly navigate to the important messages.

- **QuickRules** — The ability to create QuickRules is now provided on the Tools drop down menu. This allows users to quickly and easily create a rule, based on a specific e-mail, that can help them manage the flow of information in their inbox. A dialogue box will prompt users for the type of rule they would like to create (delete, change priority, move to a folder). Users can maximize their productivity by freeing up time to focus on more important tasks.

- **Unread e-mail view** — Users can now easily toggle on/off between showing only unread mail in the inbox view, with a single click on the action bar. This can help users to better focus on the mail they have yet to act upon.

- **Drag and drop e-mail to Calendar or To Do bookmark to create a copy-into effect** — Users now can drag an e-mail from a mail view to the Calendar or To Do bookmark and create a new calendar entry or to do — helping to save time by accelerating the process of creating a new calendar entry or to do. The calendar entry or to do is automatically populated with the relevant information from the e-mail and the user can also add other details as required for the entry.

- **Print e-mails without distribution list** — Users can specify their preference whether or not to include the “to:” and “cc:” field contents when printing a memo or a calendar entry, helping to save space on printed materials when there is a lengthy distribution list.

- **Set Notes as default e-mail client** — Users can now set Lotus Notes as their default mail client. When they click a “mailto:” link on a Web page, a new message window will automatically open in Notes, allowing users to start working faster.

- **Export views to Comma Separated Views (CSV)** — Users can now easily export data from a view in Notes to a spreadsheet, helping to increase productivity and offering flexibility in how users choose to present information. Users can have Users can have Lotus Notes view data in CSV format, resulting in documents from the Notes view appearing as individual records in the CSV file.

**IBM Lotus Domino Web Access 6.5: Advanced functionality and enhanced user interface**

- **Lotus Instant Messaging integration** — Instant messaging functionality has been incorporated into Domino Web Access. Users benefit from presence awareness and the ability to open a chat session with other Lotus Instant Messaging (Sametime) users without separately launching the Lotus Instant Messaging application. The result is increased productivity as users can instantly collaborate with colleagues while remaining within the context of a specific task.

- **Follow-up flags** — Users can mark entries in their mail with a follow-up flag. The follow-up flag allows users to indicate to themselves that there is further action to be taken, helping to maximize responsiveness to incoming requests.

- **Linux client support delivered via Mozilla browser** — Domino Web Access 6.5 extends messaging and collaboration to Linux clients with support for the Mozilla browser, making it the first-ever fully supported client-to-server collaboration solution for Linux. Domino Web Access is now an ideal solution to realize the potential cost savings of deploying Linux at both the server and the client ends. Because it is a browser-based messaging solution, Domino Web Access can be deployed with little or no client-side deployment cost — a huge potential savings for any organization looking to extend messaging and collaboration to additional users.

- **Block sender mail rule** — This allows Domino Web Access users to add a specified sender to a block sender list so that future messages from that address are blocked from displaying in the inbox view. Future mail from this sender will be automatically moved to the Junk Mail view. Users can potentially benefit from less junk mail in their inbox, helping them to quickly navigate to the important messages.

- **Copy into** — Domino Web Access users now have the ability to copy the body of a received message into a new to do item or calendar entry with a single click,
sav ing time and allowing users to more efficiently manage daily tasks.

- **Send-and-file** — Similar to the Notes client functionality, the Domino Web Access user can now “send and file” new messages in a single step. Clicking the “send and file” button sends the document and files it in a folder all in one step, saving time and helping users efficiently manage their inbox and folders.

- **Print multiple documents from the view** — Domino Web Access users now have the ability to select and print multiple documents in a view. Users are presented with three options to help them easily print in their preferred format.

- **Multiple time zone support** — Domino Web Access now provides support for multiple time zones in calendar entries and in the calendar view, allowing users to easily understand calendar commitments across time zones.

- **To-do enhancements** — Users have the ability to create to-do items that can be assigned to another individual or group.

- **Send, sign, and verify encrypted mail messages** — Domino Web Access builds upon its state-of-the-art, security-rich features with the addition of new delivery options for sending secure mail. Users can now send encrypted and signed messages as well as verify digital signatures — using the same security delivered in Notes. Users can benefit from these additional security features directly from the Domino Web Access user interface.

- **Archive locally with off-line support** — In Domino Web Access 6.5, Win32 users have the ability to create and store an archive locally, extending off-line support so users can maximize productivity while off-line. Users can easily access their local or server-based archive from a link in the Domino Web Access user interface.

- **Webmail redirect** — Domino Web Access Webmail redirect allows users to access their mail file without needing to know the name of their mail server. The Webmail redirect is a database that resides on the server and processes URLs. Using Domino authentication methods, Domino Web Access will redirect a user’s browser to their mail file based on their user name and password. Users can easily access their local or server-based archive from a link in the Domino Web Access user interface.

- **Ability to easily customize the design template** — Domino Web Access 6.5 provides the mechanism for customers to easily modify or customize design templates to better fit their business needs. Domino developers can customize the design of select forms of the iNotes™ template using Lotus Domino Designer®. Modifications can include: adding action buttons to views or dialog boxes, providing additional choices for the Welcome Page, and replacing the Domino Web Access logo with a corporate logo.

- **Server-side caching of generated and compressed content** — Domino Web Access now caches certain static data, such as forms, so the mail client only needs to bring down the data once — instead of requesting the data from the server each time — resulting in improved scalability and performance.

- **Gzip compression** — Gzip compression of Domino Web Access content is done to reduce network bandwidth consumption and improve client performance on slow networks (modems). This can help improve client-side performance, especially in regions where bandwidth is at a premium.

**IBM Lotus Domino 6.5: Lower your total cost of ownership and make your users more productive, with secure collaboration for your employees, customers, suppliers, and partners**

**What is new in IBM Lotus Domino 6.5**

- **New platform support**: Linux on zSeries® (Linux for S/390) and Microsoft® Windows™ 2003 Server.

- **Database unread marks can now replicate between databases on clustered servers or on all servers where the database resides.**

- **You can rename a resource by changing its name, its site, and, if the resource is of type “Other,” its category.**

- **New administration enhancements:**
  - A unified interface for Fault Recovery and Cleanup Scripts. Now administrators can enable or disable NSD to collect diagnostic data, enable or disable server restarts, and specify clean-up scripts, all from within the Domino Server document.
  - Semaphore management now adds timestamps in SEMDEBUG.TXT, to better correlate the timeouts to what is occurring in the server log.
  - Improved serviceability to enable more rapid diagnosing and resolving of customer issues:
    - The Automatic Diagnostic Collection (ADC) tool collects diagnostic data after server and client crashes and sends the collected data to a mail-in database when the server or client restarts. You can then use the collected data to determine the cause of the crash.
    - Memcheck is now enhanced by locking memory pools when executed, so there are no extraneous errors reported when it does its memory validation.
    - Storing 10 last (number controlled by notes.ini) versions of server documents in XML format, in the IBM_TECHNICAL_SUPPORT directory, so that admins can track changes.

- **Domino for z/OS® customers can now exploit hardware cryptography for SSL, leading to lower CPU utilization.**

- **Domino Statistics and Monitoring now includes platform statistics for Domino on Linux.**

- **Server.Load now includes workloads for Domino Web Access, IMAP, and R6Mail.**

- **Single sign-on (SSO) enhancements:**
  - The Domino 6.5 Web Server caches Internet password changes for SSO users.
  - In addition to the SSO fixed expiration timeout, you can configure an SSO idle timeout to prompt users again to enter their password.

**Lotus Domino Designer 6.5: Rapidly create multiplatform applications to automate business processes and increase workflow efficiency**

- **Adding instant messaging to an application** — You can integrate online awareness in forms or views with the flip of a switch — no programming is required. You can enable a Names field so that the field displays the online status of Lotus Instant Messaging users listed in the field. A Notes user viewing the document can
Click the name of an active user and initiate a chat. You can also enable a column in a view so that the names of Lotus Instant Messaging users listed in the column display their online status and are available to the user for chats.

- **Export views to an ASCII file with comma separated values (CSV)** — The CSV format is an ASCII text file with one record per line whose fields are separated by commas.

- **New Java™/CORBA classes** — All the new classes introduced in Domino 6 are now available in Java with Domino 6.5. You can easily and securely connect to computing systems, lower computing costs, and speed software development with Java technology. Some of the new classes are DXLExporter, DXLImporter, RichTextNavigator, RichTextSection, RichTextTable, and more.

- **Lotus Domino Toolkit for WebSphere Studio 1.1** — We have exposed more Lotus Domino custom JavaServer Pages (JSP) tags. You can develop JSP using WebSphere Studio more quickly with the help of the Lotus Domino Toolkit for WebSphere Studio. You simply drag and drop Domino forms, views, and agents onto a JSP you created in WebSphere Studio. These JSPs can then be integrated into portlets hosted on WebSphere Portal.

- **Updated open database connectivity (ODBC) drivers** — The Lotus Connector for ODBC is available with the following drivers:
  - DataDirect Release 4.2 SP3 Lotus-branded driver for native Lotus Connector for ODBC
  - DataDirect 4.2 Sybase Wire Protocol
  - DataDirect 4.2 Oracle Wire Protocol

- **Lotus Domino Toolkit for WebSphere Studio 1.1** — We have exposed more Lotus Domino custom JavaServer Pages (JSP) tags. You can develop JSP using WebSphere Studio more quickly with the help of the Lotus Domino Toolkit for WebSphere Studio. You simply drag and drop Domino forms, views, and agents onto a JSP you created in WebSphere Studio. These JSPs can then be integrated into portlets hosted on WebSphere Portal.

- **Support for installation to multiple Domino partitions** — Using Domino server partitioning, you can run multiple instances of the Domino server on a single computer. By doing so, you reduce hardware expenses and minimize the number of computers to administer because, instead of purchasing multiple small computers to run Domino servers that might not take advantage of the resources available to them, you can purchase a single, more powerful computer and run multiple instances of the Domino server on that single machine. Now you can install LEI 6.5 into multiple Domino partitions.

- **Performance improvements for virtual document activities** — Improved the performance of virtual document activities. Faster view refresh and faster document display.

- **Read access control for connection and activity documents** — Increased security by adding read access control for connection and activity documents. Only users specified will have access to these connection and activity documents.

- **Enhanced reporting includes dependent activities** — Activity logs now will contain more information about dependent activities.

- **Expanded connectivity options for IBM Lotus Domino** — Connect to Oracle, Informix™, SQL Server, and Sybase with enhanced connectivity options.

- **Lotus Connectors enhanced to use DataDirect ODBC drivers** — These new drivers add support for XML and MySQL. These new drivers from DataDirect use wire protocols to access the external data source. This means there is no requirement for client code to be installed that accesses the external data source. The ODBC driver includes the necessary code to access the external data source.

- **Support for Linux Red Hat 7.2 and Solaris 9 operating systems** — New support has been added for the Linux Red Hat 7.2 operating system. In addition to the Solaris 8 operating system, support has been added for the Solaris 9 operating system.

---

**IBM Lotus Notes and Domino 6.5 offerings currently available**

**IBM Lotus Domino Messaging Server:** IBM Lotus Domino Messaging Server for access to the messaging and calendaring functions of IBM Lotus Domino only. This server includes the partitioning feature, which allows customers to have multiple instances of Domino Servers on the same machine. This server requires that each user accessing the server have a Client Access License (CAL). This offering replaces the Domino Mail server.

**IBM Lotus Domino Enterprise Server:** IBM Lotus Domino Enterprise Server for access to the full collaborative functions of IBM Lotus Domino in addition to the messaging and calendaring features above. In addition to the partitioning functionality, the Enterprise server also includes clustering. Clustering allows Domino data to be replicated in real time across a cluster of servers. This allows customers to balance the loads on their servers, and provides automatic failover when a server is unavailable. This server requires that each user accessing the server have a CAL. This offering incorporates and replaces the current Domino Applications and Domino Advanced Enterprise server offerings.

**IBM Lotus Domino Utility Server:** IBM Lotus Domino Utility Server for access to Domino-based applications where individual mail is not required. The Domino Utility Server allows a customer to provide access to applications, without the requirement of purchasing or tracking individual CALs.

**IBM Lotus Domino Collaboration Express:** The IBM Lotus Domino Collaboration Express offering is powered by the Domino Enterprise Server, and allows customers to use both the messaging and collaborative capabilities of Domino. Customers can choose to access Domino via Lotus Notes, or Lotus Domino Web Access (iNotes Web Access) clients for both e-mail and collaborative applications. IBM Lotus Domino Collaboration Express offers high scalability, powerful performance, advanced management and administration tools, and increased flexibility to keep you at a competitive advantage. IBM Lotus Domino Collaboration Express helps to lower total cost of ownership while providing increased user productivity, superior messaging and collaboration, and rock solid security.

**IBM Lotus Domino Utility Server Express:** The IBM Lotus Domino Utility Server Express offering is powered by the Domino Enterprise Server, and provides unlimited access to collaborative applications, but does not allow the use of individual mail files. Customers can choose to access their Domino applications through a Web browser, or via a separately purchased Lotus Notes client.
Domino Utility Server Express makes applications available to internal or external users. Access is allowed for individually authenticated as well as anonymous users.

Lotus IBM Domino Utility Server Express entitles customers to take full advantage of Domino’s advanced clustering and partitioning features. This all adds up to create the perfect choice for a company looking to fully deploy a custom Domino application either created in house, purchased from a third-party vendor, or created by one of IBM’s thousands of expert Business Partners. Domino applications not only help reduce a company’s total cost of ownership, but also can dramatically improve a company’s core business applications, leading to increased revenue.

Statement of direction

For the last 20 years, Lotus software from IBM has been at the forefront of the computing revolution. In many ways, it has helped shape the world we all work in today. Going forward, Lotus software will continue to deliver one of the most comprehensive portfolios of messaging and collaboration solutions available, designed to help maximize collaboration and human productivity. Lotus solutions offer high performance, secure access, and robust tools that help all user communities to manage their messaging and collaboration needs, regardless of company size and industry focus.

All statements regarding IBM’s plans, directions, and intent are subject to change or withdrawal without notice.

Trademarks

IBM Global Services, IT Education Services, provides education to support many IBM offerings. Descriptions of courses for IT professionals and managers are on the IBM Learning Services Web site:

Refer to the IBM Learning Services Web site for information on course locations and availability dates.

Call IBM IT Education Services at 800-IBM-TEACH (426-8322) for catalogs, schedules, and enrollments.

Offering information

Product information is available through the Offering Information Web site at:

http://www.ibm.com/common/ssi

and through the Passport Advantage® Web site at:

http://www.ibm.com/software/passportadvantage

Publications

No publications are shipped with these products.

The IBM Publications Center:

http://www.ibm.com/shop/publications/order

The Publications Center is a worldwide central repository for IBM product publications and marketing material with a catalog of 70,000 items. Extensive search facilities are provided. Payment options for orders are via credit card or customer number. A large number of publications are available online in various file formats, and they can all be downloaded free of charge.

The IBM Publications Notification System:

http://service5.boulder.ibm.com/pnsrege.nsf/messages/welcome

The Publications Notification System (PNS) enables subscribers to set up profiles of interest by order number or product number. PNS subscribers automatically receive notifications by e-mail of all new publications defined in their profiles. These may then be ordered or downloaded via the Publications Center.

Hardware requirements: For the most up-to-date information, refer to each product’s Release Notes.

IBM Lotus Notes® 6.5

- **Memory**
  - Windows™ 95 (Second Edition installer minimum) and Windows 98: 64 MB RAM required; 128 MB or more recommended
  - Windows NT™, V4.0 (Intel™ Pentium™ only) with Service Pack 6a: 64 MB
  - Macintosh OS X (10.1 and 10.2): 128 MB RAM required; 256 MB or more recommended

- **Disk space**
  - Windows: 275 MB disk space
  - Macintosh OS X (10.1 and 10.2): 250 MB disk space

IBM Lotus® Domino™ 6.5

- **For Microsoft™ Windows 2000**
  - Minimum of 128 MB RAM (192 MB or more recommended)
  - 1 GB hard disk space (1.5 GB recommended)

- **For Microsoft Windows NT, V4.0 (using an Intel processor)**
  - Minimum of 128 MB RAM (192 MB or more recommended)
  - 1 GB hard disk space (1.5 GB recommended)

- **For Sun Solaris, V2.8 (SPARC)**
  - Minimum of 192 MB RAM (256 MB or more recommended)
  - 1 GB hard disk space (1.5 GB recommended)

- **For IBM OS/400®, V5.1, or later**
  - Minimum of 288 MB RAM (512 MB or more recommended)
  - 1 GB hard disk space (1.5 GB recommended)

- **For IBM z/OS®, V1.2, or later**
  - 1 GB or more recommended for both memory and hard disk space
• For IBM AIX®, V4.3.3x and V5.1
  - Minimum of 192 MB RAM (256 MB or more recommended)
  - 1 GB hard disk space (1.5 GB recommended)
• For SUSE LINUX Enterprise Server, V8.0 (using an Intel processor)
  - Minimum of 128 MB RAM (192 MB or more recommended)
  - 1 GB hard disk space (1.5 GB recommended)
• For Red Hat Advanced Server, V2.1 (using uniprocessors only)
  - Minimum of 128 MB RAM (192 MB or more recommended)
  - 1 GB hard disk space (1.5 GB recommended)

**IBM Lotus Domino Web Access (formerly iNotes™ Web Access)**

• **Memory**
  - 256 MB, or higher
  - For the OS/400 operating system: 288 MB minimum (512 MB recommended)
• **Disk space**
  - 1 GB or higher (1.5 GB recommended)
  - For Windows 2000 and OS/400 operating systems: Minimum 1 GB available disk space (2 GB recommended)

**IBM Lotus Domino Designer® 6.5**

• For Microsoft Windows 98
  - Minimum of 64 MB RAM (128 MB recommended)
• For Microsoft Windows NT
  - Minimum of 64 MB RAM (128 MB recommended)
• For Microsoft Windows 2000 and Windows XP
  - Minimum of 128 MB RAM (256 MB recommended)

**IBM Lotus Enterprise Integrator™ 6.5**

• For Microsoft Windows 2000 and Windows NT
  - 40 MB available disk space
• For Solaris and AIX
  - 80 MB available disk space

**Software requirements:** For the most up-to-date information, refer to each product’s Release Notes.

**IBM Lotus Domino 6.5**

New in Domino 6.5: Linux on zSeries® and Windows 2003 Server

- IBM AIX: 5.1, 5.2
- IBM z/OS: V1.2
- IBM OS/400: V5.1, V5.2
- Linux: Red Hat AS 2.1 (uniprocessor only), United Linux Powered by United Linux 1.0 SP2 for Linux on Intel and for Linux on S/390
- Sun: Solaris 8, Solaris 9

**IBM Lotus Notes 6.5**

- Macintosh: OS X (10.1 and 10.2)

**IBM Lotus Domino Web Access (formerly iNotes Web Access)**

• **Server**
  - IBM AIX: 5.1, 5.2
  - IBM z/OS: V1.2
  - IBM OS/400: V5.1, V5.2
  - Linux: Red Hat AS 2.1 (uniprocessor only), United Linux Powered by United Linux 1.0 SP2 for Linux on Intel and for Linux on S/390
  - Sun: Solaris 8, Solaris 9

• **Client**
  - Linux: Red Hat 7.2, Red Hat 8.0, SuSE 8.0 (United Linux 1.0)
  - Additional requirement: Adobe Acrobat Reader 4.0 (to view and print PDFs generated by the Calendar print preview feature)

• **Browsers**
  - Microsoft Internet Explorer 5.5
  - Microsoft Internet Explorer 6.0
  - Mozilla 1.3.1

**IBM Lotus Domino Designer 6.0**

**IBM Lotus Enterprise Integrator 6.5**

- Microsoft: Windows NT 4.0 with SP 6a, Windows 2000, Windows 2003
- IBM AIX: 4.3.3, 5.1, 5.2
- IBM OS/400: V5.1, V5.2
- Linux: Red Hat 7.2, United Linux Powered by United Linux 1.0 SP2
- Sun: Solaris 8, Solaris 9

**Planning information**

**Installability:** Software Maintenance, previously referred to as Subscription and Technical Support, is now included in the Passport Advantage Agreement. Installation and technical support for the products announced in this letter is provided by the Software Maintenance offering of the IBM International Passport Advantage Agreement. This fee service enhances customer productivity by providing voice and/or electronic access into the IBM support organizations.
For additional information, refer to the IBM software support Web site at:

http://www.ibm.com/software/support/

or contact your IBM representative or IBM Business Partner.

Packaging: IBM Lotus Notes/Domino and Lotus Enterprise Integrator 6.5 will be distributed via a media package and electronic software distribution (ESD).

IBM Lotus Notes/Domino media package is distributed in one package with the following:

- Lotus Notes/Domino product CDs.
- Softcopy product documentation including read-me files is included on the product CDs.
  - The LI form number for Lotus Domino is L-GHUS-5DXLBG.
  - The LI form number for Lotus Notes is L-GHUS-5DXLAS.

IBM Lotus Enterprise Integrator 6.5 media package is distributed in one package with the following:

- Lotus Enterprise Integrator product CD.
- Softcopy product documentation including read-me files is included on the product CD.
  - The LI form number for Lotus Enterprise Integrator is L-JMEE-5LEHN9.

These programs, when downloaded from a Web site, contain the applicable IBM license agreement and License Information (LI), if appropriate, which will be presented for acceptance at the time of installation of the program. The license and LI will be stored in a directory such as LICENSE.TXT for future reference.

Security, auditability, and control

The customer is responsible for evaluation, selection, and implementation of security features, administrative procedures, and appropriate controls in application systems and communication facilities.

IBM Lotus Notes/Domino 6.5 is a product which has nine chargeable components available as either a per processor or per user: Domino Messaging Server, Notes with Messaging, Domino Web Access Messaging, Domino Enterprise Server, Notes for Collaboration, Domino Web Access Collaboration, Domino Designer, Domino Utility Server, and Lotus Domino Webmail for Messaging. These are available in single fixed order quantities. Lotus Notes/Domino 6.5 is available at an upgrade price for those customers currently licensed for the following qualifying programs:

Qualifying program | Program upgrade
--------------------|------------------
Competitive E-mail User, IBM iNotes Collaboration User
Lotus Domino Webmail User,
iNotes Messaging User

Upgrades may be acquired up to the current level of use authorized for the qualifying programs.

IBM Lotus Enterprise Integrator 6.5 is a product which has one chargeable component available as a per processor: Lotus Enterprise Integrator. This product is available in a single fixed order quantity.

IBM Electronic Services

IBM Global Services has transformed its delivery of hardware and software support services to put you on the road to higher systems availability. IBM Electronic Services is a Web-enabled solution that provides you with an exclusive, no-additional-charge enhancement to the service and support on the IBM @server. You should benefit from greater system availability due to faster problem resolution and pre-emptive monitoring. IBM Electronic Services is comprised of two separate but complementary elements: IBM Electronic Services news page and IBM Electronic Service Agent™.

IBM Electronic Services news page provides you with a single Internet entry point that replaces the multiple entry points traditionally used by customers to access IBM Internet services and support. The news page enables you to gain easier access to IBM resources for assistance in resolving technical problems.

The IBM Electronic Service Agent is no-additional-charge software that resides on your IBM @server system. It is designed to proactively monitor events and transmit system inventory information to IBM on a periodic, customer-defined timetable. The IBM Electronic Service Agent tracks system inventory, hardware error logs, and performance information. If the server is under a current IBM maintenance service agreement or within the IBM warranty period, the Service Agent automatically reports hardware problems to IBM. Early knowledge about potential problems enables IBM to provide proactive service that maintains higher system availability and performance. In addition, information collected through the Service Agent will be made available to IBM service support representatives when they are helping answer your questions or diagnosing problems.

Limited warranty applies: Yes

Warranty: This program has warranty for a minimum of one year from acquisition from IBM or authorized Business Partner. The warranty provided to the customer, for at least one year from acquisition, is access to databases (read Web sites) for program information and FAQs, including any known fixes to defects, which customers can download or obtain otherwise and install at their leisure.

Program Technical Support: Technical Support of a program product will be available for a minimum of three years from the general availability date, as long as your Software Maintenance is in effect. This Technical Support allows you to obtain assistance (via telephone or electronic means) from IBM for product-specific, task-oriented questions regarding the installation and operation of the program product. Software Maintenance also provides you with access to updates, releases, and versions of the program. Customers will be notified, via announcement letter, of discontinuance of support with 12 months’ notice. If you require additional technical support from IBM, including an extension of support beyond the discontinuance date, contact your IBM representative or Business Partner. This extension may be available for a fee.

Money-back guarantee: If for any reason you are dissatisfied with the program, return it within 30 days from the invoice date to the party (either IBM or its reseller) from whom you acquired it for a refund. This applies only to your first acquisition of the program.

Volume orders (IVO): No

Passport Advantage applies: Yes and through the Passport Advantage Web site at:

http://www.ibm.com/software/passportadvantage

Software Maintenance applies: Yes

Software Maintenance, previously referred to as Subscription and Technical Support, is now included in the Passport Advantage Agreement. Installation and technical support for the products announced in this letter is provided by the Software Maintenance offering of the IBM International Passport Advantage Agreement. This fee service enhances customer productivity by providing voice and/or electronic access into the IBM support organizations.

IBM includes one year of Software Maintenance with the initial license acquisition of each program acquired. The initial period of Software Maintenance can be extended by the purchase of a renewal option that is available.

While your Software Maintenance is in effect, IBM provides you assistance for your (1) routine, short duration installation and usage (how-to) questions; and (2) code-related questions. IBM provides assistance via telephone and, if available, electronic access, only to your information systems (IS) technical support personnel during the normal business hours (published prime shift hours) of your IBM support center. (This assistance is not available to your end users.) IBM provides Severity 1 assistance 24 hours a day, every day of the year. For additional details, consult your IBM Software Support Guide at:

http://techsupport.services.ibm.com/guides/handbook.html

Software Maintenance does not include assistance for (1) the design and development of applications, (2) your use of programs in other than their specified operating environment, or (3) failures caused by products for which IBM is not responsible under this agreement.

For more information about the Passport Advantage Agreement, refer to the IBM International Passport Advantage Agreement Software Announcement 201-202, dated July 10, 2001, or visit the Passport Advantage Web site at:

http://www.ibm.com/software/passportadvantage

Passport Advantage

For Passport Advantage information and charges, contact your IBM representative or authorized IBM Business Partner. For additional information about the Passport Advantage offering, visit the following Web site:

http://www.ibm.com/software/passportadvantage

To order, contact the Americas Call Centers, your local IBM representative, or your IBM Business Partner.

To identify your local IBM Business Partner or IBM representative, call 800-IBM-4YOU (426-4968).

Global Financing

IBM Global Financing offers competitive financing to credit-qualified customers to assist them in acquiring IT solutions. Our offerings include financing for IT acquisition, including hardware, software, and services, from both IBM and other manufacturers or vendors. Offerings (for all customer segments: small, medium, and large enterprise), rates, terms, and availability can vary by country. Contact your local IBM Global Financing organization or visit the Web at:

http://www.ibm.com/financing

Use the “Select a Country” Menu to find a contact in your location (or country).

Order now

To order, contact the Americas Call Centers, your local IBM representative, or your IBM Business Partner.

To identify your local IBM representative or IBM Business Partner, call 800-IBM-4YOU (426-4968).

Phone: 800-IBM-CALL (426-2255)
Fax: 800-2IBM-FAX (242-6329)
Internet: ibm—direct@vnet.ibm.com
Mail: The Americas Call Centers
Dept. YE001
P.O. Box 2690
Atlanta, GA 30301-2690

Reference: YE001

The Americas Call Centers, our national direct marketing organization, can add your name to the mailing list for catalogs of IBM products.

Note: Shipments will begin after the planned availability date.
