At a glance

Enterprises today are consuming a growing variety of IT services from multiple service providers. To provide a consistent experience for users, they require a service ecosystem based on common integration standards.

IBM® Service Integration and Management (SIAM) offers a standard way to design, build, and run such a service ecosystem. It uses IBM's deep-rooted service delivery capabilities and its global processes to set clear standards for collaboration and information exchange. Ecosystem partners can adhere to these standards directly or interface to them. By providing a standard framework, IBM SIAM offers users a seamless experience.

Overview

IBM's modular and easy-to-integrate SIAM improves operational efficiency and service quality, providing a stable operating environment. This in turn helps organizations to reduce complexities of a multisourced environment, thereby exercising better control over their business. In addition, it helps:

- Build a transparent operating environment with predictable outcomes
- Establish an integrated supplier ecosystem for effective and intelligent service delivery
- Strengthen operational stability, aligning the supplier ecosystem to a multivendor governance framework

Planned availability date

November 13, 2018
