Overview

IBM® Content Collector Discovery Analytics V2.1.0 brings the innovative and full-featured capabilities of IBM Content Collector and IBM InfoSphere eDiscovery products into one product offering. It only gets better. This offering is available in a starter pack edition designed to help organizations affordably purchase a comprehensive solution for their small to medium projects of between 250 and 1,400 users.

Legal discovery, compliance regulations, risk management, and storage optimization are driving factors why companies mandate the archiving of business-critical information. With the volumes of electronically stored information (ESI) of all sorts growing exponentially, companies need to move beyond simple point solutions focused on single content type archival and implement solutions that expand to multiple content types and bridge siloed information systems. Add to that the mandates of the Federal Rules of Civil Procedure (FRCP), global economic uncertainty, and increased scrutiny of regulatory compliance efforts, organizations feel the pressure to quickly adapt and respond to legal proceedings, investigations for early case assessment, or corporate audits and inquiries. Despite these growing market needs, most vendors can only provide either point archiving solutions or disjointed eDiscovery solutions that do not address the escalating volumes and types of information that drive ballooning eDiscovery costs.

IBM Content Collector Discovery Analytics provides organizations with comprehensive advanced collection, archiving, eDiscovery, and analytics capabilities for staggering volumes of ESI.

With the latest advancements in its eDiscovery capabilities, IBM Content Collector Discovery Analytics V2.1 gives you the tools to search, cull, hold, and export case-relevant content -- all through an easy-to-use, feature rich, Web-based user interface. IBM Content Collector Discovery Analytics supports organizations’ efforts to gain early insight into a case, identify key concepts, locate critical pieces of evidence, understand important facts, and form early case strategies while preserving chain of custody to help improve security, auditability, and defensibility.

Planned availability dates

August 21, 2009: Electronic software delivery - English only
August 28, 2009: Electronic software delivery - National language
September 22, 2009: Media and documentation
Refer to the complete announcement for globalization details.
