Lotus Domino Family for IBM AS/400

Overview

Combine the strengths of AS/400® and Lotus® Domino™ to position your organization for the twenty-first century.

- Empowers you with industry-leading mail, calendaring, and collaboration applications
- Enhance existing business applications
- Reach new levels of collaboration and coordination in your organization
- Create, deploy, and manage e-business solutions on a server known for:
  - Reliability
  - Scalability
  - Integrated security

A Lotus Domino solution is now easier than ever to order and own. Lotus Domino servers and clients are being made available as part of an AS/400 Licensed Program and therefore may be purchased as part of a complete AS/400 hardware and software solution. Also available is Domino Designer with its powerful application development tools and Lotus Enterprise Integrator for integrated access to enterprise DB2® data.

Planned Availability Date

August 20, 1999

At a Glance

- Order Lotus Domino with your AS/400
- Order optional Quarterly Maintenance Releases (QMRs)
- Purchase complete solution including server and client software
- Lotus Domino Enterprise Server for AS/400 is included under Software Subscription

For ordering, contact:
Your IBM representative, an IBM Business Partner, or IBM Americas Call Centers at 800-IBM-CALL Reference: YE010

Domino Server Family

The Domino Server Family is an integrated messaging and Web application software platform for growing companies that need to improve customer responsiveness and streamline business processes. You can rely on the top-rated, global service and support of:

- Lotus
- IBM
- A worldwide network of Business Partners

Each marketing channel can help you maximize the return on your Domino infrastructure investment. Lotus Domino Enterprise Server for AS/400 Release 4.6 and Release 5 are available along with Lotus Enterprise Integrator. Lotus Domino includes the server and client code packaged as one product.

AS/400 releases supported are V4R2, V4R3, and V4R4.

Based on a single and consistent architecture, the Domino Server Family modular server platform delivers:

- Rich messaging
- Powerful Web application function
- Industry-leading:
  - Scalability
  - Availability
  - Reliability

Domino affords even the largest and most demanding enterprise customers the flexibility to start simple and grow fast.

Domino Enterprise Server R4.6

For your mission-critical business activities, you demand uninterrupted access and maximum performance under all conditions. The Enterprise Server R4.6 builds on the unmatched functionality of Domino Mail and Domino Application Servers with high-availability services.

Lotus Domino R5 Enterprise Server

Power to Connect People — Easily, Securely, Reliably —
The Lotus Domino Enterprise Server provides value-added clustering services. No single server can match the R5 for scalability and fault tolerance. Workloads are dynamically balanced across the cluster for optimal service even during peak usage.

Maximum Up-time for Applications — The Domino Enterprise Server delivers the industry’s highest level of availability for applications. Within a Domino cluster, replicas of applications, including Web applications, remain continuously synchronized on a per-transaction basis. If a clustered server goes down, users can transfer to another, fully-updated instance of the application.

Server Consolidation Choices — You can configure Domino clusters independent of the hardware platform, operating system, or location of individual servers. You can partition individual systems to support many Domino Servers. You benefit from lower cost of ownership and maximum utilization of resources across any size deployment.

Domino Enterprise Server Benefits

- **Highest availability for applications** — If a server or application goes down, users are immediately redirected to another server in the cluster. Domino replication synchronizes application replicas up to the last transaction performed. Events are cached for later delivery to unavailable servers.

- **Most efficient use of server resources** — Within a cluster, dynamic load balancing guarantees optimal resource usage—and optimal response times—under all load conditions.

- **Maximum scalability** — To increase capacity, simply add servers to the cluster as workload increases. Use partitioning to deliver hosting capabilities by running an unlimited number of Domino servers on a single system.

- **Disaster recovery** — Keep an emergency backup server up-to-date with your production mail and application environment. You can even cluster Domino Enterprise Servers across multiple locations over a WAN.

- **Support for consolidation and upgrading** — Cluster new Domino Enterprise Servers in parallel with systems to be replaced, then “failover” to the new servers with no disruption of service. Cluster Domino R4.6 and R5 servers together to maximize reliability during your upgrade.

Domino Enterprise Server Flexibility

- Cluster multiple servers—even mix Domino platforms

- Cluster any combination of Domino R5 and Domino R4.6 servers

- Deploy multiple clusters in a Domino domain

- Include partitioned servers within clusters

- Span multiple LAN segments to create campus-wide clusters

Unequaled Availability

- **Web clustering** — The new Internet Cluster Manager extends failover and load balancing capabilities to Web browsers, offering enhanced reliability for Web applications.

- **Multiple partitions per server** — Use partitions to easily manage large groups of users or to isolate types of work. Domino partitions are each associated with their own subsystem to allow managing of your AS/400 resources.

- **Transactional logging for Domino databases** — The industry standard for reliable data storage. Ensures complete data integrity for updates and facilitates incremental database backup and fast restart after system failures.

- **Enhanced backup support** — APIs allow tight integration with third-party backup tools on all Domino platforms.

Enterprise-Scale Manageability

- **Simple, flexible administration** — Intuitive, task-oriented support for remote server administration, cross-domain administration, security management, and much more.
• Centralized control of Notes™ Desktops — Organizations that use the Lotus Notes® client can centrally configure desktop settings like home server and user interface preferences.

• Support for multinational deployments — Native SMTP routing supports all major languages, simplifying the configuration of multilingual mail routing environments. The Domino Directory implements LDAP V3, which supports a multilingual directory implementation.

• Comprehensive functionality and services — The Domino Enterprise Server delivers all the unmatched Internet messaging functionality and robust applications services found in the Domino Mail and Domino Application Servers.

**Notes R5 — The Easiest Internet Client**

With Notes R5, the collaborative power of the Notes client has met the browser’s ease of use.

**Headlines** — A new Headlines page lets you select the information you want to see first, and how you want to see it. You can choose to see important e-mail messages, tasks, meetings, and key Web sites, even updates from intranet applications, all from the Headlines page. If you received an urgent e-mail message, the full document is just a mouse click away. IT organizations can customize Headlines to feed corporate intranet information right onto the user’s desktop or put a company logo in the page.

**Bookmarks** — You can easily create links to Web pages, intranet applications, documents, views, and forms for click access.

**Window Tabs** — Keep track of multiple open pages and quickly navigate among them. You can simply drag and drop a Window tab to the Bookmarks Bar to create a new bookmark.

**Search** — Notes R5 offers easy-to-use, advanced search capabilities. You can search for information across your entire network, even when you’re not sure what the actual phrase should be — making it even easier to find what you need, wherever it may be.

**e-mail** — Notes R5 enhances support for signature files, point-and-click rules creation for robust in-box management, optional automatic spell checking, and a fully HTML-compliant editor. Notes is secure and reliable — important factors in choosing your application for Internet mail.

**Calendaring** — Group calendar views let you create ad-hoc views of multiple colleagues’ calendars at once to get the real picture on everyone’s free and busy time. Bookmark group calendars for instant access to a snapshot of your team’s availability. Take it with you and print your calendar with one-, seven-, fourteen-, or thirty-one-day views. Synchronize your calendar with popular hand-held devices such as the 3Com PalmPilot or IBM WorkPad®.

**Lightweight Directory Catalog** — Notes offers power for the occasionally-connected user, with the lightweight directory catalog. Store your company’s entire directory in a lightweight and responsive local directory for easy addressing while disconnected. Supports LDAP lookups for quick searches.

**A Powerful Tool for Any Infrastructure** — Current Notes users can upgrade quickly and easily. Even users who have non-Domino, standards-based mail servers or use ISP-hosted mail can benefit from the power of Notes R5. Notes R5 offers full standards support for:

• Internet mail, including POP3, IMAP4, and LDAP v3

• Native content types, including MIME, S/MIME, HTML, NNTP, Java™, JavaScript and X.509 certificates

• Supported Platforms
  - Windows™ 95
  - Windows 98
  - Windows NT® 4.0 Workstation
  - Mac PowerPC 7.6, 8.1

**Lotus Domino Designer**

Lotus Domino Designer is an optionally-ordered feature with Lotus Domino Enterprise Server for AS/400. Lotus Domino Designer R5 is an open, integrated Web application development environment, with everything you need to rapidly build and deploy secure e-business applications that connect enterprise data with strategic processes.

**Leverage Current Skills** — Domino Designer includes all the visual tools you’d expect in a world-class Web development environment, like WYSIWYG HTML authoring, site/page design, frameset design, and application preview. You can create or modify Domino applications using your choice of programming and scripting languages, including Java, JavaScript, and LotusScript® — all in one environment. You can develop Domino Web applications in your favorite Java Integrated Development Environment (IDE), embed Java applets and servlets, and create Java server agents.

Rapid Development Support Domino Designer delivers breakthrough innovations for rapid development. Support for Domino Enterprise Connection Services (DECS) means you can connect to enterprise data without programming. Domino Objects provide direct access to the rich services of the Lotus Domino Application Server, from messaging to security to workflow, via your choice of programming languages.

Domino Designer offers an unprecedented set of capabilities no other Web development environment can match. It’s the fastest, most cost-effective way to create secure, high-value business solutions.

**Domino Per-Server Client Access License**

The Domino Per-Server Client Access License (CAL) is an optionally-ordered feature of the Lotus Domino Enterprise Server for AS/400. A Domino Per-Server CAL gives you the right to allow authenticated access to one or more Domino applications on a specific Domino server by individuals who are not employees or independent contractors of your enterprise.

With Domino Release 4.6, Lotus significantly opened up the Domino server to access from non-Notes Mail® clients and browsers, then added further enhancements in Release 5, and will continue to enhance the server functionalities with future releases. It is now possible for users of IMAP and POP3 mail clients to use Domino as their mail server, and for browser users to participate in a full range of secure Domino groupware (workflow, discussions) applications.
Industry Definitions — The Gartner Group defines CALs as “the right for a client process to access the services of a specific server independent of the client.” Both Microsoft and Netscape have adopted this model. There are three basic CAL models in the industry today:

- **Per-User Access Fee**: Best for situations when users can be easily counted, where price varies based on value of server services, and each user is uniquely identified.
- **Server-Based Access Fee**: Best for situations where it is difficult to count users (for example, anonymous users) and to understand usage patterns.
- **Concurrent Usage**: Best for situations when there are many “occasional” users; primarily offered by database vendors. Pricing tends to vary by customer.

How CAL Works — The Domino CAL is required for all authenticated usage on Domino servers. Authentication is:

1. Secure validation of a user’s unique identity
2. From/to Domino or other source
3. Before participating in an application hosted on Domino

With our revised CAL model, Lotus offers both a Per-User Access Fee for employees and a Per-Server Access Fee as an option for non-employees. Lotus is revising the Domino CAL model based on feedback from customers and partners in order to simplify and make it easier for customers to understand the licensing requirements related to deploying Domino applications across all segments of users.

Domino Per-User CAL is required for all authenticated users who are employees of the company.

Lotus Enterprise Integrator (formerly NotesPump)

The Lotus Enterprise Integrator (LEI) is a server-based product providing data movement between DB2 Universal Data Base (UDB) for AS/400 and Domino with no programming required. Domino forms-bases interfaces are used to map fields in Domino databases to columns in a DB2 table. LEI takes care of the movement and conversion of data between the data sources.

The AS/400 implementation adds unique capabilities to LEI. AS/400 access rights are mapped to Domino access rights for an unprecedented security implementation. An exclusive of the AS/400 implementation of LEI is the propagation of deleted records so that any operations (update, insert, or delete) can be synchronized between your Domino databases and DB2 UDB for AS/400 tables.

LEI also allows exchange of data with the integrated file system of the AS/400 system and ERP applications.

Year 2000

These products are Year 2000 ready. When used in accordance with their associated documentation, they are capable of correctly processing, providing, and/or receiving date data within and between the twentieth and twenty-first centuries, provided that all products (hardware, software, and firmware) used with the products properly exchange accurate date data with them.
Lotus Support

Lotus® Support is provided in various means. It is recommended that the Internet be used first. Visit the following Web sites:

http://support.lotus.com

“Search Lotus Knowledge Base” should be used to determine if your problem has already been reported. It also contains information on the solutions to problems.

http://notes.net

Go to the “Iris Cafe” for technical discussions on the Notes™ and Domino™ products. Here you can browse through technical discussions and submit technical questions.

In order to report a defect, you must first have a Lotus support contract. You must have purchased an incident pack (and still have unused incidents) or purchase an individual incident. If what you are reporting really is a new defect, then you will not be charged an incident for the call. If it is not a defect or it is a defect that is already documented on the Lotus support Web site, then you will be charged an incident for the call. Check the support Web site before calling support about a potential defect.

An incident is defined as one or more questions asked by a single caller to Lotus Support, relating to a single customer issue. Any question which is determined by Lotus to be a defect in Lotus Software or has not been addressed in materials made available to the customer will not be counted as an incident. Materials made available to the customer include printed or online literature or resolved in subsequent product releases, it will not count against your incident limit.

You have a 12-month period during which to use your support incidents. If you use them sooner than that, simply purchase another incident pack to extend your support coverage another 12 months and continue to have access to Lotus Customer Support resources.

Incident-based support allows multiple callers to access Lotus Support analysts. Rather than having support coverage limited to a single designated caller, you can share support coverage among several system administrators or help desk staff.

• Incident packs are available for all product categories, including Lotus Notes®, Domino and Developer Tools.

• Lotus Customer Support operates within normal business hours. However, a separate five incident contract is available for round the clock support (24 hours per day, seven days per week) for key products. Normal business hours are defined as the local support center’s prime time, depending on location and time zone. Monday through Friday, excluding country, location, and subject to country working regulations and office times.

Note: 24x7 support is not available for Developer Tools.

• If you purchase any of these support options, you receive one free annual CD-ROM subscription to Lotus Knowledge Base, the same technical database used by Lotus support analysts. Lotus Knowledge Base covers all products and contains everything from technical notes and specification sheets to frequently-asked questions, product updates, and troubleshooting scripts. You also have access to Lotus Knowledge Base via the Lotus Customer Support Web site:

http://www.support.lotus.com

Lotus Support Resources on the Web: With Passport Advantage Support contracts, you also have access to Lotus eSupport services. The Lotus Interactive Web Support service at http://www.support.lotus.com provides Web-based customers with a wealth of electronic customer support services.

• Search Lotus’ Knowledge Base to find the answers to your questions. This covers all products and contains everything from technical notes and specification sheets to frequently-asked questions, product updates, and troubleshooting scripts. You also have access to Lotus Knowledge Base via the Lotus Customer Support Web site:

http://www.support.lotus.com

This announcement is provided for your information only. For additional information, contact your IBM representative, call 800-IBM-4YOU, or visit the IBM home page at: http://www.ibm.com.
• Access the Lotus File Transfer Protocol (FTP) server at:
  ftp://ftp.support.lotus.com/pub
• Browse through Lotus’ product libraries for complimentary technical information.
• Reach TIPS and troubleshooting documents to help diagnose and solve your own problems.
• Keep up-to-date on product updates and new releases.
• Download demonstration programs, application templates, printer drivers, software updates, sample Notes applications, and command files.

For more information, contact one of the Lotus Professional Services Support Centers.

---

**Publications**

The following hardcopy publications are shipped with these programs:

<table>
<thead>
<tr>
<th>Title</th>
<th>Order Number</th>
</tr>
</thead>
<tbody>
<tr>
<td>5769-LNT Release 4.6 Installing and Managing Domino for AS/400®</td>
<td>SK3T-4003</td>
</tr>
<tr>
<td>Lotus Notes Designer for Domino 4.6 Application Developer’s Guide Release 4.6 Client Pubs Kit</td>
<td>SK3T-4004</td>
</tr>
<tr>
<td>Lotus Notes Release 4.6 Step by Step Lotus Notes 4.6 Install Guide</td>
<td>SK3T-4008</td>
</tr>
</tbody>
</table>

**Displayable Softcopy Publications:** Lotus Domino products are offered in displayable softcopy form. All unlicensed manuals are included. The displayable manuals are part of the basic machine-readable material, a no-charge feature. The files are shipped on the same media type as the basic machine-readable material: CD-ROM.

These displayable manuals may be accessed via Lotus Notes in any of the supported environments. Displayable manuals are also available on the Internet in Lotus Notes format and some are available in PDF format. The URL address is:

http://www.lotus.com/home.nsf/welcome/store

---

**Technical Information**

**Specified Operating Environment**

**Hardware Requirements**

• AS/400-based on PowerPC RISC technology
• 16 MB base memory

• 0.5 MB to 1 MB memory for each active mail user
• 490 MB disk space for Domino executables and data (such as data directories and help files)
• 50 MB disk space for each registered and active mail user (varies, depending on how much information each user stores)

**Note:** The memory and disk space requirements are based on results from a test environment. Use these values as general guidelines for minimum memory and disk space requirements. The requirements for your environment may be different. For more information about sizing an AS/400 for Domino, refer to the following Web site:

http://www.as400.ibm.com/notes

**Software Requirements**

• OS/400® Version 4 Release 2 (5769-SS1), or later

The Lotus release specifiers (Release 4.6 and Release 5.0) are not the same as the version and release designators AS/400 (V4R2, V4R3, and V4R4) uses and should not be confused with the AS/400 versions and releases. The AS/400 will use the Lotus release specifiers in the same manner as the AS/400 versions and releases to designate the VRM of the product (V4R6Mx and V5R0Mx). The M (modification) level defines the QMR level.

---

**Planning Information**

**Direct Customer Support:** Installation and technical support is available through Lotus Passport Advantage Incident Support. Installation services are available through IBM Global Services.

**Security, Auditability, and Control**

Security and auditability features of the Lotus Domino Enterprise Server for AS/400 include support of SSLv3 and X.509v3 certificates, secure Internet mail (S/MIME), and VeriSign Global Server IDs that negotiate a 128-bit cipher when communicating with international browsers and servers over HTTP, NNTP, LDAP, IMAP, and POP3.

The security functions of Lotus Domino Enterprise Server for AS/400 interface with the security functions of OS/400. The Domino databases, which are files in the AS/400 integrated file system, are by default excluded from public access when Domino creates them.

The customer is responsible for evaluation, selection, and implementation of security features, administrative procedures, and appropriate controls in application systems and communication facilities.

---

**Ordering Information**

Lotus Domino Enterprise Server for AS/400 (5769-LNT) ordering options:

• Product release needs to be specified, either Domino Enterprise Server Release 4.6 or Release 5.0
• Domino Enterprise Server for AS/400 and first Notes client language defaults based on the AS/400 language feature
• Number of Notes clients needed
• Number of Domino Designer clients (optional feature)
• Encryption level
• Quarterly Maintenance Release (QMR) order and encryption level (software subscription is required)
• Upgrade from Domino Enterprise Server Release 4.6 to Release 5.0 (software subscription required)

Primary and secondary language concept does not apply to Lotus Domino Enterprise Server for AS/400. Multiple client languages can be ordered on one server.

**Initial Order**

**Lotus Domino Enterprise Server for AS/400:** To order Lotus Domino Enterprise Server for AS/400, specify 5769-LNT and feature for asset registration and one of the following features to specify which release and encryption level you need. These features ship the server and client code:

<table>
<thead>
<tr>
<th>Release Level</th>
<th>Feature Number</th>
</tr>
</thead>
<tbody>
<tr>
<td>4.6</td>
<td>5829</td>
</tr>
<tr>
<td>5.0</td>
<td>5859</td>
</tr>
</tbody>
</table>

Lotus Domino Enterprise Server for AS/400 also requires the processor group for the server be specified:

<table>
<thead>
<tr>
<th>Processor Group</th>
<th>Feature Number</th>
</tr>
</thead>
<tbody>
<tr>
<td>P05</td>
<td>1881</td>
</tr>
<tr>
<td>P10</td>
<td>1882</td>
</tr>
<tr>
<td>P20</td>
<td>1883</td>
</tr>
<tr>
<td>P30</td>
<td>1884</td>
</tr>
<tr>
<td>P40</td>
<td>1885</td>
</tr>
<tr>
<td>P50</td>
<td>1886</td>
</tr>
</tbody>
</table>

2 One-time charge

**National Languages Supported:** The following table lists the NLVs available and their feature numbers. Specify the appropriate NLV feature desired for the Lotus Domino Enterprise Server for AS/400.

<table>
<thead>
<tr>
<th>Language</th>
<th>Feature Number</th>
</tr>
</thead>
<tbody>
<tr>
<td>English</td>
<td>2924</td>
</tr>
</tbody>
</table>

**Preload Domino Enterprise Server (5769-LNT) Software**

<table>
<thead>
<tr>
<th>Description</th>
<th>Feature Number</th>
</tr>
</thead>
<tbody>
<tr>
<td>Load software on hardware before shipping</td>
<td>5000</td>
</tr>
<tr>
<td>Boulder Media / Pubs shipment</td>
<td>3506</td>
</tr>
<tr>
<td>Load software on hardware before shipping</td>
<td>3455</td>
</tr>
</tbody>
</table>

**Lotus Notes for Collaboration:** Specify the number of clients needed. A minimum of one must be ordered for an initial license order.

<table>
<thead>
<tr>
<th>Number of Clients</th>
<th>Feature Number</th>
</tr>
</thead>
<tbody>
<tr>
<td>Per client</td>
<td>1903</td>
</tr>
<tr>
<td>Per 250 clients</td>
<td>1904</td>
</tr>
</tbody>
</table>

**Designer Feature of Domino for AS/400 (Optional):** Order the Domino Designer feature of Lotus Domino Enterprise Server for AS/400. Specify the number of clients needed.

<table>
<thead>
<tr>
<th>Number of Clients</th>
<th>Feature Number</th>
</tr>
</thead>
<tbody>
<tr>
<td>Per client</td>
<td>1906</td>
</tr>
<tr>
<td>Per 250 clients</td>
<td>1907</td>
</tr>
</tbody>
</table>

**Domino Per-Server Client Access License (CAL) (Optional):** Domino Per-Server CAL (formerly known as Extranet license) is ordered by specifying a feature along with the number of servers to be licensed.

<table>
<thead>
<tr>
<th>Number of Servers</th>
<th>Feature Number</th>
</tr>
</thead>
<tbody>
<tr>
<td>Per server</td>
<td>1905</td>
</tr>
</tbody>
</table>

**Ordering QMRs (Quarterly Maintenance Releases)**

QMRs are offered by Lotus as a complete refresh of the product on a quarterly basis. These releases incorporate all the fixes accumulated in that quarter into this release. The IBM program libraries will update their code with the latest QMR and ship that level in all initial orders. Any additional updates you need will require you to place an order for the latest QMR. Specify the following features:

- Language you need
- Suppress shipping publications
- Release of the product and the encryption level you need

The availability of QMUs and QMRs are contained in the Web site:

http://www.as400.ibm.com/Lotus_Notes/QMULIST.HTM

**Processor Upgrades**

If the processor group level of your system increases, you will need to order a new level for your Lotus Domino Enterprise Server for AS/400. Specify the feature number that corresponds to the level increase from the table below:

<table>
<thead>
<tr>
<th>From 5769-LNT</th>
<th>P05</th>
<th>P10</th>
<th>P20</th>
<th>P30</th>
<th>P40</th>
<th>P50</th>
</tr>
</thead>
<tbody>
<tr>
<td>P05</td>
<td>1887</td>
<td>1898</td>
<td>1899</td>
<td>1900</td>
<td>1901</td>
<td></td>
</tr>
<tr>
<td>P10</td>
<td></td>
<td>1892</td>
<td>1893</td>
<td>1894</td>
<td>1895</td>
<td></td>
</tr>
<tr>
<td>P20</td>
<td></td>
<td></td>
<td>1896</td>
<td>1897</td>
<td>1898</td>
<td></td>
</tr>
<tr>
<td>P30</td>
<td></td>
<td></td>
<td></td>
<td>1899</td>
<td>1901</td>
<td></td>
</tr>
<tr>
<td>P40</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>1902</td>
<td></td>
</tr>
</tbody>
</table>

**Lotus Enterprise Integrator (LEI) Ordering**

To order LEI, specify 5769-LNP. The LEI (5769-LNP) is only available in English. To order specify the feature numbers below:
<table>
<thead>
<tr>
<th>Description</th>
<th>Feature Number</th>
</tr>
</thead>
<tbody>
<tr>
<td>Lotus Enterprise Integrator (5769-LNP) OTC</td>
<td>1908</td>
</tr>
<tr>
<td>Additional Licenses without media, OTC</td>
<td>1910</td>
</tr>
<tr>
<td>Language (English)</td>
<td>2924</td>
</tr>
<tr>
<td>Asset Registration</td>
<td>9001</td>
</tr>
<tr>
<td>Media</td>
<td>5809</td>
</tr>
</tbody>
</table>

**Additional Ordering Information**

The following features number apply to both the Lotus Domino Enterprise Server for AS/400 (5769-LNT) and Lotus Enterprise Integrator (5769-LNP).

**Customization Options:** Select the appropriate feature numbers to customize your order with delivery options desired. These features can be specified on the initial or MES orders.

**Example:** If publications are not desired for the initial order, specify 3470 to ship media only.

<table>
<thead>
<tr>
<th>Description</th>
<th>Feature Number</th>
</tr>
</thead>
<tbody>
<tr>
<td>Initial Shipments</td>
<td></td>
</tr>
<tr>
<td>Serial Number Only (suppresses shipment of media and documentation)</td>
<td>3444</td>
</tr>
<tr>
<td>Ship Media Only (suppresses initial shipment of documentation)</td>
<td>3470</td>
</tr>
<tr>
<td>Ship Documentation Only (suppresses initial shipment of media)</td>
<td>3471</td>
</tr>
</tbody>
</table>

**Expedite Shipments**

<table>
<thead>
<tr>
<th>Description</th>
<th>Feature Number</th>
</tr>
</thead>
<tbody>
<tr>
<td>Local IBM Office Expedite (for IBM use only)</td>
<td>3445</td>
</tr>
<tr>
<td>Customer Expedite Process Charge ($30 charge for each product)</td>
<td>3446</td>
</tr>
</tbody>
</table>

Expedite shipments will be processed to receive 72-hour delivery from the time IBM Software Delivery and Fulfillment (SDF) receives the order. SDF will then ship the order via overnight air transportation.

**Terms and Conditions**

**Licensing:** IBM International Program License Agreement. Proofs of Entitlement (PoE) are required for all authorized use.

**Limited Warranty Applies:** Yes

**Program Services:** Defect Support Available Until:

<table>
<thead>
<tr>
<th>OS/400 Release</th>
<th>Service Expiration Date</th>
</tr>
</thead>
<tbody>
<tr>
<td>Lotus Domino Release 4.6 (5769-LNT)</td>
<td></td>
</tr>
<tr>
<td>V4R2</td>
<td>May 31, 2000</td>
</tr>
<tr>
<td>V4R3</td>
<td>January 31, 2001</td>
</tr>
<tr>
<td>V4R4</td>
<td>May 31, 2001</td>
</tr>
</tbody>
</table>

**Lotus Domino Release 5.0 (5769-LNT)**

<table>
<thead>
<tr>
<th>Feature</th>
<th>Date</th>
</tr>
</thead>
<tbody>
<tr>
<td>V4R2</td>
<td>May 31, 2000</td>

</tbody>
</table>

**Money-Back Guarantee:** Two-month, money-back guarantee

**Copy and Use on Home/Portable Computer:** No

**Support Line:** No

**Volume Orders:** Yes, contact your IBM representative.

**Passport Advantage Applies:** No

**Passport Advantage Subscription Applies:** No

**Upgrades:** Customers can acquire upgrades up to the currently authorized level of use of the qualifying programs.

**AIX®/UNIX® Upgrade Protection Applies:** No

**Entitled Upgrade for Current AIX/UNIX Upgrade Protection Licensees:** No

**AS/400 Software Subscription Applies:** Yes, for the server only; this does not include the client features.

**Variable Charges Apply:** Yes

**Educational Allowance Available:** Yes, to qualified educational institution customers.

**Charges**

Contact your IBM representative for charges information for this announcement.

**Call Now to Order**

Contact the IBM Americas Call Centers (to help IBM serve you, use the Reference Code):

- **Phone:** 800-IBM-CALL
- **Fax:** 800-2IBM-FAX
- **Internet:** ibm_direct@vnet.ibm.com
- **Mail:** IBM Americas Call Centers
  Dept. YE010
  P.O. Box 2690
  Atlanta, GA 30301-2690
  Reference Code: YE010

You can also contact your local IBM Business Partner or IBM representative. To identify them, call 800-IBM-4YOU.

**Note:** Shipments will begin after the planned availability date.

IBM Americas Call Centers, our national direct marketing organization, can add your name to the mailing list for catalogs of IBM products.
