IBM Lotus Connections 3.0 provides social software for building professional networks and customer communities

At a glance

IBM® Lotus® Connections 3.0 is designed to help you:

- Exchange ideas with, and benefit from, the expertise of other people using the new Forums application
- Expand your professional network through social analytics based recommendations for people to connect with, and communities to join
- Build vibrant communities that encourage participation with sub-communities focused on key topics of interest to the members
- Access profile information, search for expertise, and view status more quickly with an enhanced page navigation
- Stay informed of the latest updates from across your social network with new notification capabilities
- Access your social data while on the go using an expanded choice of mobile device support

For ordering, contact your IBM representative, an IBM Business Partner, or IBM Americas Call Centers at 800-IBM-CALL.

Reference: YE001

Overview

IBM Lotus Connections 3.0 is social software designed to meet the needs of business. It empowers business professionals to be more innovative and productive by helping them build networks of subject matter experts to call upon. It facilitates the creation of vibrant communities of employees, partners, and customers where creative ideas can be exchanged that can help foster increased business growth. It also provides companies with the tools needed to help teams accomplish their business objectives whether they are located locally or distributed geographically.

New capabilities

Expanding your professional network of colleagues

Social analytics based widgets provide recommendations for people with whom you might wish to connect. The widgets also display what you have in common with an individual (for example, community membership) and the social path that links you to a person.

Providing increased flexibility with a stand-alone Forums application

Forums can now be used as a stand-alone application. This provides added flexibility in opening discussions with an entire organization on topics that are not associated with a community. Forums continue to have the ability to integrate within a community.

Growing vibrant communities

Community owners can invite individuals to join a community. Members of public communities can invite people to join the community. Community owners can create sub-communities focused on topics that are of special interest to subsets of a community. Communities can be organized to collaborate on projects by adding a subset of community members to an activity.

Locating the expertise you need

Accessing profile information is designed to be faster with an updated page navigation approach. Searching your company's directory and accessing your network contacts has been streamlined.

Staying informed whether in the office or on the go

The list of supported mobile devices is expanded, and the number of Lotus Connections applications that can be accessed from a mobile browser is expanded.

Key prerequisites

Refer to the Hardware requirements and Software requirements sections for details.

Planned availability date

November 24, 2010: Electronic availability

December 3, 2010: Media availability

Description

IBM Lotus Connections 3.0 adds new capabilities across all of its existing applications, new social analytics capabilities, and a new Forums application for holding discussions.

Forums: The new Forums application provides increased flexibility by allowing discussion forums to take place outside of Communities. The Forums application provides a convenient way to create an online discussion board where people can ask questions, share their experiences, and discuss topics of common interest. Participating in a forum allows you to benefit from the expertise of other people through the exchange of ideas with your teammates and others who share your interest in a topic.

Social analytics widgets

New social analytics widgets are available in the Home Page, Communities, and Profiles applications and are designed to help you to:

- Expand your professional network
- Find content and communities that might interest you

A new Recommendations widget appears in the Home Page and Communities applications.

- Recommendations: In the Home Page application, this widget recommends content that you might find interesting based on your existing community membership, network connections, tags, and so forth. In the Communities application, the Recommendations widget suggests communities that you might want to join.

The following three new widgets appear in the Profiles application:

- Do You Know: This widget recommends people for you to add to your network based on your existing connections, tags, organizational relationships, and actions that you have taken in the different applications.
- Things in Common: This widget helps you identify what you have in common with a person. For example, the widget might display a list of the communities that you and the profile owner both belong to, or a list of the tags that you have both used.
- Who Connects Us: This widget allows you to view the social path that links you to a person when you are viewing that person's profile. The social path displays as a list of people who link you and the profile owner.

Home Page: The Home Page application helps provide individuals with a consolidated view of their social data from across all of the Lotus Connections applications.

The following Home Page features are new or updated:

Discovering relevant content

- A new Recommendations widget suggests content from the different applications that might interest you.
- You can use the recommendations to help you to expand your network and find content that is relevant to you.

Staying informed of updates

- The user experience is enhanced with the addition of new filtering options that make it easier for you to keep up with the latest updates.
- The My To-Do List widget has been changed from a calendar format to a list format, making it easier to quickly scan your to-do items and prioritize them as needed.

Communities: The Communities application helps individuals with a common interest, responsibility, or area of expertise to connect with each other, share information, exchange ideas, and collaborate on projects.

The following Communities features are new or updated:

Discovering, following, and contributing to communities

- A recommendations widget suggests communities for you to join based on your existing community membership, network connections, and tags.
- You can now follow communities that interest you to get the latest updates from those communities in the Home Page news feed.
- New filtering options are available on the My Communities page, which allow you to display communities that you own, are a member of, or are following.
- The new Files widget allows you to share files from the Files application with your communities, as well as upload them from your local computer.

Customizing a community

- Communities can now have sub-communities allowing members to bring added attention to selected topics.
- When creating an activity for a community, you can add a subset of members to the activity and choose the role that those members will have. This can help to focus your efforts on projects.

- When you apply a theme to a community, the theme is now also applied to the community blog, wiki, and forums, providing visual consistency when you are working with communities and community content.
- Community owners can add multiple forums to a community. Community members can also perform additional tasks, such as marking forum topics as questions.

Growing a community

- Community owners can invite people to join their community.
- Members of public communities can send invitations to people who they think might be interested in becoming community members.

Profiles: The Profiles application helps you locate the people you need by searching across your organization using keywords that help identify expertise, current projects, and responsibilities.

The following Profiles features are new or updated:

Expanding and connecting with your professional network

- The Do You Know, Things In Common, and Who Connects Us widgets help you discover what links you to other people in your organization.
- The new Directory page simplifies searching your company's directory to find the people and expertise that you need.
- A new My Network page makes your network contacts just a click away.

Navigating to the profile information you need

- Updates to the navigation in Lotus Connections allow you to navigate directly to any page in Profiles by clicking Profiles in the product navigation bar and selecting the page that you want to go to.
- The My Profile page user experience has been enhanced making it easier and faster for you to navigate between the different areas of your profile.

Keeping profile status current

- When individuals leave an organization, the administrator can set their status to inactive. When you view the profile of an inactive user, the profile owner is flagged as an inactive user and their profile photo is no longer available.

Wikis: The wikis application provides a convenient online method for teams to author content collaboratively, edit it, and then publish it. This is designed to help businesses to create content faster, and also improve its quality by utilizing input from a variety of experts.

The following wikis features are new or updated:

Customizing a wiki

- Moving pages has been made easier with a new Move Page dialog design.
- You can reorder pages by dragging and dropping them in the navigation tree.
- You can paste in content from other sources more easily with the improvements in the rich text editor.

Locating the wiki you need

- You can find a wiki by selecting Go to wiki in the search menu and typing the title.
- You can search for all public wikis and wikis you are a member of by selecting All Wikis in the search menu.
- In My wikis, a new navigation box provides a simple way to see different views of wikis. For example, you can click I'm an Owner to see wikis to which you have owner access.

- The My wikis view now has a tag cloud.

Tracking changes

- You can find pages edited by a person by opening the Index of a wiki, expanding the Pages section, and clicking Edited by.

Managing wiki membership

- A new membership view allows you to more easily control membership and access. The view has a new layout displaying role information and role filters.

Files: The Files application helps provide a fast and easy way to share files with individuals and groups. The model is simple. You upload a file of any type and add readers and editors to it.

The following Files features are new or updated:

Navigating to and following files

- Open a file or folder and click Follow to receive notification when the file or folder is updated.
- Click the thumbtack icon next to your favorite files and folders to add them to the Pinned Files or Pinned Folders views.

Contributing, organizing, and managing files

- Files can be gathered together into folders to match your projects or areas of interest.
- Files can be easily added to folders by dragging and dropping them onto a folder.
- Files can be moved to a trash view where they are not visible to others. They are not permanently deleted until you choose to empty the trash view.
- Personal files can be easily shared with a community.

Blogs: The Blogs application helps you to present your ideas, get feedback from others, and learn from the expertise and experience of others who blog.

The following Blogs features are new or updated:

Editing a blog

- A new editor makes it easier to author blog entries and enhance them with pictures and videos.
- Auto-save saves your in-progress work and reminds you when you have unsaved work so you can resume editing.

Moderating a blog

- Moderation has been significantly improved to give more control to the administrator to moderate information or to delegate the work.
- You can now assign reviewers to a moderation role so they can review flagged content.
- New configuration options allow you to assign reviewers for each category of flagged content.

Activities: The Activities application helps individuals to create online work areas where they and their teammates can gather together the emails, IM chats, documents, messages, and other information that they need to accomplish a business objective.

The following Activities features are new or updated:

Creating activities for use by a community

- You can add a community to an activity either while creating the activity or afterward.
- You can restrict access for a community activity to a subset of community members.

Locating an activity

- You can now search the tag cloud for a specific tag and multiple tags.

Bookmarks: The Bookmarks social bookmarking application helps you to save, organize, and share bookmarks as well as discover bookmarks that have been qualified by others.

The following Bookmarks features are new or updated:

- The enhanced bookmark form makes it easier to tag a bookmark and add it to another application.
- Updated notification gives you more options for notifying other users about a broken link.

Expanded support for mobile usage

Lotus Connections 3.0 expands the number of its applications that are accessible from a mobile browser. Support for mobile browser access has been added to the Lotus Connections Home Page, Bookmarks, Forums, Communities, Files, and Wikis applications.

Examples of the capabilities provided include:

- Update your status
- Add new people to your network
- Share a file
- Log into a community to post information
- Add a bookmark

The list of supported mobile devices is expanded to include the Apple iPad and devices running the Android 2.x operating system.

The Profiles, Activities, and Blog applications also continue to be supported for mobile browser access.

New API added to track data changes

A new API enables the tracking of all data changes across the Lotus Connections applications. This API can be used by software developers and application providers to provide a variety of solutions that integrate with Lotus Connections.

New API added for moderation

Lotus Connections 2.5 introduced the concept of moderation for end-user generated content in blogs. With Connections 3.0, a new API has been added to enhance existing capabilities for blogs as well as extend the moderation capabilities to community Files and Forums. This API can be used by developers and application providers to provide moderation solutions including pre-moderation (inappropriate language filter) and post-moderation (content flagging by users) among other capabilities.

Publications

No publications are shipped with this product.

The IBM Publications Center

The Publications Center is a worldwide central repository for IBM product publications and marketing material with a catalog of 70,000 items. Extensive search facilities are provided. Payment options for orders are via credit card (in the U.S.) or customer number for 20 countries. A large number of publications are available online in various file formats, and they can all be downloaded by all countries.

Technical information

Specified operating environment

Hardware requirements

The following hardware is required for the systems that host IBM Lotus Connections features.

Memory requirement for x86-32/64 and POWER® Intel® (x86-32 or x86-64 compatible server systems) and POWER systems per Lotus Connections node:

Application Node

- Two processor cores per server, 2.0 GHz CPU speed, or higher
- Minimum 4 GB of memory for IBM Connections Server
  - For enterprise-scale deployments, at least 16 GB of memory is recommended.

Database server

- Two processor cores per server, 2.0 GHz CPU speed, or higher
- Minimum 4 GB of memory
  - For enterprise-scale deployment, at least 16 GB of memory is recommended.
- 50 GB of available disk space after installation and configuration of the base operating system

Memory requirement for System z®

Application Node

- At least two System z9® processors with Integrated Facility for Linux® (IFL)
- Minimum 4 GB of memory for IBM Lotus Connection Server
  - For enterprise-scale deployments, at least 16 GB of memory is recommended.

Database server

- Two System z9 processors with IFL
- Minimum 6 GB of memory
  - For enterprise-scale deployment, at least 16 GB of memory is recommended.
- 50 GB of available disk space after installation and configuration of the base operating system

The program's specifications and specified operating environment information may be found in documentation accompanying the program, if available, such as a README file, or other information published by IBM, such as an announcement letter. Documentation and other program content may be supplied only in the English language.

Planning information

Software Subscription and Support (also referred to as Software Maintenance) is included with licenses purchased through Passport Advantage and Passport Advantage Express®. Product upgrades and technical support are provided by the Software Subscription and Support (also referred to as Software Maintenance) offering as described in the Agreements. Product upgrades provide the latest

versions and releases to entitled software, and technical support provides voice and electronic access to IBM support organizations, worldwide.

IBM includes one year of Software Subscription and Support (also referred to as Software Maintenance) with each program license acquired. The initial period of Software Subscription and Support (also referred to as Software Maintenance) can be extended by the purchase of a renewal option, if available.

Packaging

This product is available through IBM Passport Advantage in a Passport Advantage media pack or via electronic download. Publications are not shipped with the product.

The License Information form number for IBM Lotus Connections is L-JYUN-854Q65.

Security, auditability, and control

The customer is responsible for evaluation, selection, and implementation of security features, administrative procedures, and appropriate controls in application systems and communication facilities.

Ordering information

This product is only available via Passport Advantage. It is not available as shrinkwrap.

Charge metrics definitions

Authorized User

Authorized User is the unit of measure by which this program is licensed. An Authorized User is an individual (named or unnamed) within or outside of your enterprise. The program may be installed on one or more computers or servers and accessed by the number of users authorized by the Proof of Entitlement (PoE). You must have an entitlement for each Authorized User accessing the program or any program component in any manner directly or indirectly (for example, via a multiplexing program, device, or application server) through any means.

Processor Value Unit (PVU)

PVU is a unit of measure by which the program can be licensed. The number of PVU entitlements required is based on the processor technology (defined within the PVU Table by processor value, brand, type, and model number at

http://www.ibm.com/software/lotus/passportadvantage/ pvu_licensing_for_customers.html

and the number of processors made available to the program. IBM continues to define a processor, for the purpose of PVU-based licensing, to be each processor core on a chip. A dual-core processor chip, for example, has two processor cores.

Licensee can deploy the program using either full capacity licensing or virtualization capacity (sub-capacity) licensing according to the Passport Advantage Sub-Capacity Licensing Terms (refer to the webpage below). If using full capacity licensing, licensee must obtain PVU entitlements sufficient to cover all activated processor cores* in the physical hardware environment made available to or managed by the program, except for those servers from which the program has been permanently removed. If using virtualization capacity licensing, licensee must obtain entitlements sufficient to cover all activated processor cores made available to or managed by the program, as defined according to the Virtualization Capacity License Counting Rules at

http://www.ibm.com/software/lotus/passportadvantage/ Counting_Software_licenses_using_specific_virtualization_technologies.html

* An activated processor core is a processor core that is available for use in a physical or virtual server, regardless of whether the capacity of the processor core can be or is limited through virtualization technologies, operating system commands, BIOS settings, or similar restrictions.

Notes:

- Some programs may require licenses for the program **and** what is being managed. In that case, the following applies. In addition to the entitlements required for the program directly, licensee must obtain PVU entitlements for this program sufficient to cover the processor cores managed by the program.
- Some programs may be licensed on a managed basis **only**. In that case, the following applies: Instead of the entitlements required for the program directly, Licensee must obtain PVU entitlements for this program sufficient to cover the processor cores managed by the program.
- A few programs on an exception basis may be licensed on a referenced basis. In that case, the following applies. Rather than obtaining entitlements for the activated processor cores available to the program, licensee must obtain PVU entitlements for this program sufficient to cover the environment made available to the referenced program as if the program itself were executing everywhere the referenced program was executing, independent of the basis on which the referenced program is licensed.
- Express and workgroup programs may be licensed with maximum use terms. In that case, the following applies. The maximum authorized use terms and conditions for PVU licensed IBM express and middleware programs can be found in the IBM Express and Middleware Licensing Guide.

Cross-platform product for use on System z

Order the part numbers that follow when the product is used for either the development of code that will be deployed on System z servers or when the product will be communicating or transferring data between a distributed server and a System z server. Otherwise, order from the other set of part numbers in this announcement. This set of part numbers provides the identical supply and authorization as the other set in this announcement.

Cross-platform product for use on System z IFL engines

Order the part numbers that follow when the product is intended to run on the Linux operating system on System z IFL engines. If the product is not intended to run on the Linux operating system on System z IFL engines, order from the other set of part numbers in this announcement. This set of part numbers provides the identical supply and authorization as the other set in this announcement.

Terms and conditions

The information provided in this announcement letter is for reference and convenience purposes only. The terms and conditions that govern any transaction with IBM are contained in the applicable contract documents such as the IBM International Program License Agreement, IBM International Passport Advantage Agreement, and the IBM Agreement for Acquisition of Software Maintenance.

Licensing

IBM International Program License Agreement including the License Information document and PoE govern your use of the program. PoEs are required for all authorized use.

Part number products only, offered outside of Passport Advantage, where applicable, are license only and do not include Software Maintenance.

This software license includes Software Subscription and Support (also referred to as Software Maintenance).

License Information form number

Program name	Program number	Form number
IBM Lotus Connections	5724-S68	L-JYUN-854Q65

The program's License Information will be available for review on the IBM Software License Agreement website

   http://www.ibm.com/software/sla/sladb.nsf

Limited warranty applies

Yes

Limited warranty

IBM warrants that when the program is used in the specified operating environment, it will conform to its specifications. The warranty applies only to the unmodified portion of the program. IBM does not warrant uninterrupted or error-free operation of the program or that IBM will correct all program defects. You are responsible for the results obtained from the use of the program.

IBM provides you with access to IBM databases containing information on known program defects, defect corrections, restrictions, and bypasses at no additional charge. For further information, consult the IBM Software Support Handbook found at

   http://www.ibm.com/support/handbook

IBM will maintain this information for at least one year after the original licensee acquires the program (warranty period).

Program technical support

Technical support of a program product version or release will be available for a minimum of five years from the general availability date, as long as your Software Maintenance is in effect. This technical support allows you to obtain assistance (via telephone or electronic means) from IBM for product-specific, task-oriented questions regarding the installation and operation of the program product. Software Maintenance also provides you with access to updates (modifications or fixes), releases, and versions of the program. You will be notified, via announcement letter, of discontinuance of support with 12 months' notice. If you require additional technical support from IBM, including an extension of support beyond the discontinuance date, contact your IBM representative or IBM Business Partner. This extension may be available for a fee.

Money-back guarantee

For clarification, note that if for any reason you are dissatisfied with the program and you are the original licensee, you may obtain a refund of the amount you paid for it, if within 30 days of your invoice date you return the program and its PoE to the party from whom you obtained it. If you downloaded the program, you may contact the party from whom you acquired it for instructions on how to obtain the refund.

For clarification, note that for programs acquired under the IBM International Passport Advantage Agreement, this term applies only to your first acquisition of the program.

International Passport Agreement

Volume orders (IVO)

No

Passport Advantage applies

Yes, and through the Passport Advantage website at

   http://www.ibm.com/software/passportadvantage

This product is only available via Passport Advantage. It is not available as shrinkwrap.

Software Subscription and Support (Software Maintenance)

Yes. Software Subscription and Support (also referred to as Software Maintenance) is included with licenses purchased through Passport Advantage and Passport Advantage Express. Product upgrades and technical support are provided by the Software Subscription and Support (also referred to as Software Maintenance) offering as described in the Agreements. Product upgrades provide the latest versions and releases to entitled software and Technical Support provides voice and electronic access to IBM support organizations, worldwide.

IBM includes one year of Software Subscription and Support (also referred to as Software Maintenance) with each program license acquired. The initial period of Software Subscription and Support (also referred to as Software Maintenance) can be extended by the purchase of a renewal option, if available.

While your Software Subscription and Support (also referred to as Software Maintenance) is in effect, IBM provides you assistance for your routine, short duration installation and usage (how-to) questions, and code-related questions. IBM provides assistance via telephone and, if available, electronic access, to your information systems (IS) technical support personnel during the normal business hours (published prime shift hours) of your IBM support center. (This assistance is not available to your end users.) IBM provides Severity 1 assistance 24 hours a day, 7 days a week. For additional details, consult your IBM Software Support Handbook at

   http://www.ibm.com/support/handbook

Software Subscription and Support (also referred to as Software Maintenance) does not include assistance for the design and development of applications, your use of programs in other than their specified operating environment, or failures caused by products for which IBM is not responsible under the applicable agreements.

For additional information about the International Passport Advantage Agreement and the IBM International Passport Advantage Express Agreement, visit the Passport Advantage website at

   http://www.ibm.com/software/passportadvantage

Other terms

System i Software Maintenance applies

No

Educational allowance available

Not applicable.

IBM Electronic Services

IBM has transformed its delivery of hardware and software support services to help you achieve higher system availability. Electronic Services is a web-enabled solution that offers an exclusive, no-additional-charge enhancement to the service and support available for IBM servers. These services are designed to provide the opportunity for greater system availability with faster problem resolution and preemptive monitoring. Electronic Services comprises two separate, but complementary, elements: Electronic Services news page and Electronic Services Agent.

The Electronic Services news page is a single Internet entry point that replaces the multiple entry points traditionally used to access IBM Internet services and support. The news page enables you to gain easier access to IBM resources for assistance in resolving technical problems.

The Electronic Service Agent™ is no-additional-charge software that resides on your server. It monitors events and transmits system inventory information to IBM on a periodic, client-defined timetable. The Electronic Service Agent automatically reports hardware problems to IBM. Early knowledge about potential problems enables IBM to deliver proactive service that may result in higher system availability and performance. In addition, information collected through the Service Agent is made available to IBM service support representatives when they help answer your questions or diagnose problems. Installation and use of IBM Electronic Service Agent for problem reporting enables IBM to provide better support and service for your IBM server.

Prices

Passport Advantage

For Passport Advantage information and charges, contact your IBM representative or authorized IBM Business Partner, or authorized IBM Business Partner for Software ValueNet®, if applicable. Additional information is also available at

IBM Global Financing

IBM Global Financing offers competitive financing to credit-qualified customers to assist them in acquiring IT solutions. Offerings include financing for IT acquisition, including hardware, software, and services, both from IBM and other manufacturers or vendors. Offerings (for all customer segments: small, medium, and large enterprise), rates, terms, and availability can vary by country. Contact your local IBM Global Financing organization or visit

http://www.ibm.com/financing

IBM Global Financing offerings are provided through IBM Credit LLC in the United States, and other IBM subsidiaries and divisions worldwide to qualified commercial and government customers. Rates are based on a customer's credit rating, financing terms, offering type, equipment type, and options, and may vary by country. Other

restrictions may apply. Rates and offerings are subject to change, extension, or withdrawal without notice.
