At a glance

The zEnterprise® System 2819 machine type is available for administrative purposes only.

- Machine type 2819 is a fulfillment mechanism for site preparation and installation support materials on zEnterprise Systems.
- The model HEC provides site preparation and installation support materials and is configured and shipped automatically when an order is placed for an IBM zEnterprise EC12 server for a location requiring them.

Overview

In July 2010, IBM® System z® implemented a machine type, model, and feature structure for the delivery of site preparation and installation support materials on IBM zEnterprise Systems. An additional model is now added to this structure.

This machine type, its models, and its feature numbers are for administrative purposes only. These are not separate products. Through this ordering vehicle, IBM will deliver certain required materials for zEnterprise Systems including the new IBM zEnterprise EC12

Key prerequisites

None

Planned availability date

September 19, 2012

Description

The site preparation and installation support required materials are automatically configured and shipped, separately under the machine type 2819, when an order is placed for an zEnterprise System to satisfy local environmental requirements.

The site preparation and installation support required materials for the new model HEC are not separate IBM products -- this model enables a separate ordering vehicle for these site preparation and installation support required materials, to be used
only in conjunction with an order for an associated IBM zEnterprise EC12 (zEC12™), and for installation in the zEC12 server.

Reference information

For additional information about IBM zEnterprise EC12™, refer to Hardware Announcement ZG12-0262, dated August 28, 2012.
