Overview

IBM^(R) Db2 is the database of choice for enterprise-wide solutions because it offers extreme performance, flexibility, scalability, and reliability for any size organization. IBM is organizing around the Db2 brand and, as a result, there will be name changes to all of the Db2 offerings. The dashDBTM family will now be renamed to Db2 and DB2^(R) will now be referred to as Db2.

The program numbers, part numbers, terms and conditions, and pricing will remain the same. The program names, service descriptions, and license information documents are updated to reflect the new names. The part number descriptions are updated to reflect the changes to the program names embedded in the descriptions.

You do not need to make any changes to your systems and our offerings will contain the same technology with new names.

The following table maps the program numbers from their prior names to their new names:
