At a glance

IBM® Datacap Taskmaster Capture V8.0.1 delivers:

- New preconfigured medical claims capture application that provides capture, image enhancement, recognition, verification, and export for CMS 1500 medical claim forms and UB-04 Institutional claim forms
- New IBM Datacap Rulerunner Enterprise option that provides scalability and increased performance with support for multiprocessor systems and high-speed fingerprint matching
- Support for creating document batches from email and fax servers
- Additional connectors enable exporting images and index data to document repositories from IBM Content Manager, EMC Corporation, Microsoft®, and Open Text Corporation

For ordering, contact your IBM representative, an IBM Business Partner, or IBM Americas Call Centers at 800-IBM-CALL.

Reference: YE001

Overview

Enhancements in IBM Datacap Taskmaster Capture V8.0.1 provide a preconfigured capture application for medical claims processing, capture input from fax and email, conversion of electronic documents into TIFF files for capture processing, additional export connectors including to IBM Content Manager, and Microsoft SharePoint and Rulerunner Enterprise for enhanced performance and processing throughput.

Enhancements

- Optional IBM Datacap Taskmaster Medical Claims Capture Application provides a preconfigured medical claims processing application for professional (CMS 1500) and institutional (UB04) claim forms.
- Optional Datacap Rulerunner Enterprise provides scalability with support for execution of capture tasks on multiprocessors and server-based document identification (Fingerprint processing).
- Includes a connector for IBM Content Manager uploads images and associated index data to IBM Content Manager V8.
- Includes a connector for IBM FileNet® Capture that enables IBM Datacap Taskmaster to add automation and thin client distributed capture to existing IBM FileNet Capture installations.

- Optional connector for EMC Documentum
- Optional connector for OpenText LiveLink
- Optional connector for Microsoft SharePoint
- Optional capture input of email from email servers via Internet Message Access Protocol (IMAP) and Exchange Web Services (EWS).
- Optional electronic document conversion for Microsoft Word, Excel, Outlook, and PDF and multipage TIFF (image) format files to single page TIFF for processing by Taskmaster.
- Optional capture input of fax from OpenText RightFax servers.

IBM Datacap Taskmaster Capture is designed to enable users to automate the full range of document capture processing using a rule-based architecture in distributed and centralized implementations.

Key advantages

- Supports medical claims capture
- Provides enterprise scalability
- Automates capture from email and fax servers
- Supports more customer content management systems

Key prerequisites

- Installs and runs on either a single Microsoft Windows-based machine or multiple machines in a client/server environment
- Requires Microsoft Access, SQL Server, or an Oracle database for use by Taskmaster
- Requires scanner support of either TWAIN or ISIS drivers or access to previously scanned images

Planned availability date

March 11, 2011: Electronic availability

April 15, 2011: Media availability

Description

IBM Datacap Taskmaster Capture V8.0.1 provides a preconfigured capture application for medical claims processing, expanding the number of applicable industries. Additional enhancements increase the document capture, conversion, scalability, and export capabilities, making this release of IBM Datacap Taskmaster suitable for a broad range of capture solutions and use across the enterprise.

Datacap Taskmaster Capture is designed to help significantly reduce labor and paper costs, and deliver meaningful information for better and faster decisions, driven by these key value benefits:

- Full Time Employee (FTE) or equivalent reduction or repurposing
- Data entry error reduction
- Elimination of document transportation costs
- Accelerated document processing

Enhancements

IBM Datacap Taskmaster Capture V8.0.1 contains a new preconfigured capture application, enhanced input functionality, enhanced document conversion

capabilities, enhanced scalability, new connectors to IBM Content Manager, FileNet Capture, and other back-end systems.

IBM Datacap Taskmaster Medical Claims Capture Application provides a preconfigured medical claims processing application for professional (CMS 1500) and institutional (UB04) claim forms. Thick and thin web clients are supported for scanning of claims, verification and application administration, and reporting. The thick client verifies screen displays professional claim service lines, one at a time, for easier verification. Enhanced OCR includes National Provider Identifier (NPI) and information fields on service lines.

IBM Datacap Rulerunner Enterprise

This option of IBM Datacap Taskmaster provides scalability with two performance enhancing capabilities:

1. Support for virtualization inside of Datacap Taskmaster through utilization of the multiple processors available on many computers. With IBM Datacap Rulerunner Enterprise, Datacap Taskmaster executes Datacap Rulerunner processing on each CPU in a computer as if it were a standalone copy of Rulerunner on its own computer. Rules may perform recognition, image preprocessing, validation, and export. IBM Datacap Rulerunner Enterprise supports computers with multiple single processors and computers with multicore CPUs.
2. Support for server-based fingerprint processing. Fingerprints are an advanced technique of image analysis and comparison proprietary to IBM. They provide a highly accurate and quick method of page identification and document classification. Datacap Rulerunner Enterprise centralizes fingerprint processing on a server to gain significant performance when accessing hundreds or thousands of fingerprints.

Support for IBM Content Manager

IBM Datacap Taskmaster Capture Connector for Content Manager uploads images and associated index data to Content Manager V8 (CM8). This connector uses IBM Content Manager V8 Client for Windows® OLE Application Programming Interface (API) to import documents and data into the repository. Use of the connector requires a valid Content Manager User ID. The Content Manager Administrator must create the appropriate document classes (equivalent to document types in Datacap Taskmaster) and attributes (equivalent to document indexes in Datacap Taskmaster) for each type of document to be stored in Content Manager. When a document has multiple pages, the connector uploads the index data once for all image pages, enabling users to increase performance and throughput.

IBM Datacap Taskmaster Connector for IBM FileNet Capture

Integration with IBM FileNet Capture Professional allows IBM Datacap Taskmaster to add automation and thin client distributed capture to existing IBM FileNet Capture installations. This integration is included in base IBM Datacap Taskmaster Capture package.

Datacap Taskmaster Connector for email and electronic documents (eDocument conversion)

Datacap Taskmaster email actions provide the ability to create Taskmaster document batches from documents received as email attachments, and send email notification messages when a particular event occurs. The actions enable control over the type of attachments to include in the batch, for example, only TIFF images or only PDF files, helping eliminate input of improper files. The batch is created when a time out is reached or the requested number of documents has been received from the email servers. You can access the mail server via Internet Message Access Protocol (IMAP), which is supported by Microsoft Exchange Server, IBM Lotus® Domino®, Novell GroupWise, and other mail servers.

The connector also includes eDocument conversion, which provides the ability to convert Microsoft Word, Excel, Outlook, PDF, and multipage TIFF files to single page TIFF files for processing by IBM Datacap Taskmaster. These actions also support

extraction of documents from ZIP archives and the extraction of attachments from Microsoft Outlook files.

IBM Datacap Taskmaster Capture Connector for fax

The connector for fax supports capture of faxes from OpenText RightFax servers. IBM Datacap Taskmaster Capture batches are created when a time out is reached or the requested number of documents has been received from the fax server. Datacap Taskmaster for fax input also supports polling (checking for input) of multiple fax mailboxes and capture of metadata from fax header information to reduce manual input.

IBM Datacap Taskmaster Capture Connector for EMC Documentum

The connector to EMC Documentum uploads the images of specific pages within a Taskmaster application to an EMC Documentum AX application. The AX actions also set the index values that are to be exported to the AX application. This is a file-based upload.

IBM Datacap Taskmaster Capture Connector for Microsoft SharePoint

The connector to Microsoft SharePoint uploads documents with associated index values (columns) to Microsoft SharePoint. This is an API-based upload using Microsoft Office SharePoint Services (MOSS).

IBM Datacap Taskmaster Capture Connector for OpenText LiveLink

The connector to OpenText Content Server, a component of the Open Text ECM Suite (formerly known as Livelink ECM), exports documents with associated index values to this document management server. This is a file-based upload.

IBM Datacap Taskmaster Capture features

- Optional vertical applications for accounts payable invoice processing and medical claims capture of professional and institutional claim forms
- A rules-based architecture for control over the entire capture process, without complex programming
 - Rules are extensible and easy to create in .NET, VB Script, and so
- Multiprocessor support with Datacap Rulerunner Enterprise
- Datacap Taskmaster Fingerprinting for fast, accurate document identification without setting up templates
- Server-based fingerprint processing with Datacap Rulerunner Enterprise
- Scalable architecture by adding additional servers and clients that can support capture processing of several hundred thousand document pages per day
- Built-in integration with IBM FileNet P8, IBM Content Manager, IBM FileNet Image Services, IBM FileNet Capture Professional, and easy integration with other Enterprise Content Management (ECM) and Enterprise Resources Planning systems
- Choice of best-of-breed recognition engines to best fit specific needs
- Full range of document identification:
 - Manual by operator
 - Bar code on document
 - Separator sheets (with or without bar code)
 - Pattern recognition on document (logos, images, text)
 - Keywords on document
 - Fingerprinting
- Rules configurable validations including database lookups, interfield calculations, and math checks
- Browser-based remote scanning, verification, and administration

- True three-tier client/server architecture with thick and thin client architectures seamlessly integrated
- Leverages existing standards including COM, sockets, ODBC, OLE DB, HTTP, .NET, and service-oriented architecture (SOA)

IBM Datacap Taskmaster Capture offers several comprehensive packages to address your capture requirements. The base capture package provides the client, server, and image processing and recognition software necessary for automatic capture of hand print and bar code data from almost any document type with delivery to IBM repositories. Other packages provide preconfigured support for capture of accounts payable invoices and medical claims. Streamlining capture for these applications can help you achieve significant cost savings, reduced errors, and faster processing.

Rules-based architecture

IBM Datacap Taskmaster Capture's unique rules-driven architecture provides control over the entire capture process from scanning and image processing, to validations and formatting for export. Other capture products only provide rules for validations. With IBM Datacap Taskmaster Capture, every capture processing step may be customized to meet business requirements. And with deployment across centralized thick clients and remote thin clients, you are provided implementation flexibility that helps increase efficiency, speed input, and reduce the costs of shipping.

Scalable to support high document volumes

IBM Datacap Taskmaster provides a true client/server architecture that is extremely scalable. Features such as automatic document identification and automatic indexing support high volume scanning, quickly delivering information to imaging and content management systems. Datacap Rulerunner Service provides core capture capabilities decoupled from the Datacap Taskmaster capture platform. As volumes increase, you can scale by adding additional Datacap Rulerunner services to handle increased workloads. When CPU processing becomes a bottleneck, Datacap Rulerunner Enterprise is available to take advantage of multiprocessor systems, accelerating capture processing. And when there are a large volume of documents types, Datacap Rulerunner Enterprise provides centralized fingerprint processing to gain significant performance when accessing hundreds or thousands of fingerprints. Distributed capture further enables scaling by adding remote capture locations.

For information about IBM Datacap Taskmaster Capture V8.0, refer to Software Announcement [210-412](#), dated December 07, 2010.

Accessibility by people with disabilities

A US Section 508 Voluntary Product Accessibility Template (VPAT) can be requested via the IBM website

http://www.ibm.com/able/product_accessibility/index.html

Product positioning

A complete end-to-end capture solution

IBM Datacap Taskmaster Capture V8 is designed to help you reduce labor and paper costs while increasing data accuracy and accelerating document processing by automating the capture of documents from scanners, MFP devices, email and fax servers, as well as previously scanned images in local or network folders. And automatic conversion of Microsoft Word, Excel, and PDF documents supports your rapid adoption of electronic documents, which are often received by email. Direct integration with FileNet and CM8 ECM repositories, along with Microsoft SharePoint, and OpenText LiveLink, EMC Documentum, and Hyland OnBase, provides a complete platform for departmental and enterprise document image capture for all content management systems.

Offering Information

Product information is available via the Offering Information website

<http://www.ibm.com/common/ssi>

Also, visit the Passport Advantage® website

<http://www.ibm.com/software/passportadvantage>

Publications

No publications are shipped with this product.

The IBM Publications Center

<http://www.ibm.com/e-business/linkweb/publications/servlet/pti.wss>

You can download the PDF publication and find associated content for IBM Datacap Taskmaster Capture from the V8.0 library page

<http://www.ibm.com/support/docview.wss?uid=swg27020296>

The Publications Center is a worldwide central repository for IBM product publications and marketing material with a catalog of 70,000 items. Extensive search facilities are provided. Payment options for orders are via credit card (in the U.S.) or customer number for 20 countries. A large number of publications are available online in various file formats, and they can all be downloaded by all countries.

Technical information

Specified operating environment

Hardware requirements

Below are guidelines for the minimum hardware recommended to operate Datacap Taskmaster. Configurations that exceed these recommendations should result in better performance.

Station type	CPU/equivalent	RAM (GB)	Available disk (GB)	Network (MBS)
Taskmaster Server/File Server	Intel® Core 2 Duo T7500 (2.20 GHz) AMD Opteron, Athlon or Sempron	3	100 (fast)	100
Taskmaster Web Server	Intel Core2 Duo E6850 (3.0 GHz) AMD Athlon	4	80	100

Rulerunner Service	or Sempron Intel Core2 Duo E6850 (3.0 GHz)	2	80	100
Scan Station	AMD Athlon or Sempron Pentium® Dual Core E2160 (1.80 GHz) AMD Athlon or Sempron	1	10	100
Verification Station	Pentium Dual Core E2160 (1.80 GHz) AMD Opteron, Athlon or Sempron	1	10	100

Notes

1. A file server is required to store the images and intermediate processing files. The Datacap Taskmaster server can be the same computer as the file server. The storage space needed on the file server is dependent upon image size and volume.
2. The Datacap Taskmaster Web server components can run on the same computer as Datacap Taskmaster server components in a secure configuration (intranet, VPN, and so on).
3. Datacap Rulerunner stations provide all unattended processing, including document identification, recognition, image processing, validations, and export of data.
4. Datacap Taskmaster Web stations should run Microsoft Internet Explorer 6.0, or later. (Firefox is supported with limitations.)
5. Network is assumed to be Ethernet with TCP/IP running Microsoft file servers.

Software requirements

IBM Datacap Taskmaster Capture V8 requires either a single Windows-based machine or multiple machines in a client/server environment. Datacap Taskmaster supports Windows: XP SP3 (32 bit), Windows 2003 SP1 (32 bit), Windows Server 2008 (32 bit and 64 bit), and Windows 7 (32 bit and 64 bit). Servers need to run Windows 2003 or Windows 2008 Server operating system.

Notes:

1. All computers running a Datacap Taskmaster application must use the same version of Datacap Taskmaster. Operating Datacap Taskmaster Client or Datacap Taskmaster Web with an incompatible version of Datacap Taskmaster Server, or allowing different versions to access one database, can result in loss of data.
2. Servers and workstations running Datacap software require Microsoft .NET Framework 2.0 and 3.5, and if not already installed, will be installed automatically during the Datacap software installation process.
3. Servers running Datacap Taskmaster Web components require Microsoft Internet Information Services (IIS).
4. Datacap Taskmaster Web running in 64-bit Windows requires a .NET application pool configured to permit 32-bit applications. Consult the Installation and Configuration Guide for details.
5. Datacap Taskmaster requires the Microsoft MSXML 6.0 Parser, and if it is not already installed, it will be installed automatically during the software installation process.
6. Datacap Taskmaster requires the Microsoft Windows Installer 3.1, and if it is not already installed, it will be installed automatically during the Datacap software installation process.
7. Datacap Taskmaster Web verification stations should run Microsoft Internet Explorer 6.0, or later.

Supported databases

Datacap Taskmaster applications are preconfigured to use Microsoft Access for the three primary databases which store administration, batch, and rules information. The use of Oracle and SQL Server is supported and strongly recommended for enterprise or mission-critical applications.

Supported scanners

ISIS drivers are supported with Datacap Taskmaster thick clients. TWAIN drivers are used for Datacap Taskmaster Web remote scan clients.

The program's specifications and specified operating environment information may be found in documentation accompanying the program, if available, such as a readme file, or other information published by IBM, such as an announcement letter. Documentation and other program content may be supplied only in the English language.

Planning information

Customer responsibilities

Software Subscription and Support (also referred to as Software Maintenance) is included with licenses purchased through Passport Advantage and Passport Advantage Express. Product upgrades and technical support are provided by the Software Subscription and Support (also referred to as Software Maintenance) offering as described in the Agreements. Product upgrades provide the latest versions and releases to entitled software, and technical support provides voice and electronic access to IBM support organizations, worldwide.

IBM includes one year of Software Subscription and Support (also referred to as Software Maintenance) with each program license acquired. The initial period of Software Subscription and Support (also referred to as Software Maintenance) can be extended by the purchase of a renewal option, if available.

Security, auditability, and control

Datacap Taskmaster Capture uses the security and auditability features of the host software.

The customer is responsible for evaluation, selection, and implementation of security features, administrative procedures, and appropriate controls in application systems and communication facilities.

Ordering information

This product is only available via Passport Advantage. It is not available as shrinkwrap.

These products may only be sold directly by IBM or by authorized IBM Business Partners for Software ValueNet®.

Charge metrics definitions

User Value Unit (UVU)

UVU is the metric by which this program is licensed. UVU entitlements are based on the number of users for the given program. A Proof of Entitlement (PoE) must

be obtained for the appropriate number of UVUs required for your environment as defined by the specific program terms. The UVU entitlements are specific to the program and may not be exchanged, interchanged, or aggregated with UVU entitlements of another software program. UVU licensing offers you price benefits for customers by enabling a lower cost of incremental growth of resources. To understand these benefits of UVU licensing, and to determine how many UVUs to obtain for the program, contact your IBM representative.

Connection

Connection is a unit of measure by which the program can be licensed. A Connection is a link or association of a database, application, server, or any other type of device to the program. Licensee must obtain entitlements for the total number of Connections which have been or are made to the program.

Install

Install is a unit of measure by which the program can be licensed. An install is an installed copy of the program on a physical or virtual disk made available to be executed on a computer. Licensee must obtain an entitlement for each install of the program.

Processor Value Unit (PVU)

PVU is a unit of measure by which the program can be licensed. The number of PVU entitlements required is based on the processor technology (defined within the PVU Table by processor value, brand, type, and model number at

http://www.ibm.com/software/lotus/passportadvantage/pvu_licensing_for_customers.html

and the number of processors made available to the program. IBM continues to define a processor, for the purpose of PVU-based licensing, to be each processor core on a chip. A dual-core processor chip, for example, has two processor cores.

Licensee can deploy the program using either full capacity licensing or virtualization capacity (sub-capacity) licensing according to the Passport Advantage Sub-Capacity Licensing Terms (refer to the webpage below). If using full capacity licensing, licensee must obtain PVU entitlements sufficient to cover all activated processor cores* in the physical hardware environment made available to or managed by the program, except for those servers from which the program has been permanently removed. If using virtualization capacity licensing, licensee must obtain entitlements sufficient to cover all activated processor cores made available to or managed by the program, as defined according to the Virtualization Capacity License Counting Rules at

http://www.ibm.com/software/lotus/passportadvantage/Counting_Software_licenses_using_specific_virtualization_technologies.html

* An activated processor core is a processor core that is available for use in a physical or virtual server, regardless of whether the capacity of the processor core can be or is limited through virtualization technologies, operating system commands, BIOS settings, or similar restrictions.

Notes:

- Some programs may require licenses for the program **and** what is being managed. In that case, the following applies. In addition to the entitlements required for the program directly, licensee must obtain PVU entitlements for this program sufficient to cover the processor cores managed by the program.
- Some programs may be licensed on a managed basis **only**. In that case, the following applies: Instead of the entitlements required for the program directly, Licensee must obtain PVU entitlements for this program sufficient to cover the processor cores managed by the program.
- A few programs on an exception basis may be licensed on a referenced basis. In that case, the following applies. Rather than obtaining entitlements for the

activated processor cores available to the program, licensee must obtain PVU entitlements for this program sufficient to cover the environment made available to the referenced program as if the program itself were executing everywhere the referenced program was executing, independent of the basis on which the referenced program is licensed.

- Express and workgroup programs may be licensed with maximum use terms. In that case, the following applies. The maximum authorized use terms and conditions for PVU licensed IBM express and middleware programs can be found in the IBM Express and Middleware Licensing Guide.

Terms and conditions

The information provided in this announcement letter is for reference and convenience purposes only. The terms and conditions that govern any transaction with IBM are contained in the applicable contract documents such as the IBM International Program License Agreement, IBM International Passport Advantage Agreement, and the IBM Agreement for Acquisition of Software Maintenance.

Licensing

IBM International Program License Agreement including the License Information document and Proof of Entitlement (PoE) govern your use of the program. PoEs are required for all authorized use.

Part number products only, offered outside of Passport Advantage, where applicable, are license only and do not include Software Maintenance.

This software license includes Software Subscription and Support (also referred to as Software Maintenance).

License Information form number

Program name	Program number	Form number
Datacap Taskmaster Capture	5725-C15	L-PLS-896TJU

The program's License Information will be available for review on the IBM Software License Agreement website

<http://www.ibm.com/software/sla/sladb.nsf>

Limited warranty applies

Yes

Limited warranty

IBM warrants that when the program is used in the specified operating environment, it will conform to its specifications. The warranty applies only to the unmodified portion of the program. IBM does not warrant uninterrupted or error-free operation of the program or that IBM will correct all program defects. You are responsible for the results obtained from the use of the program.

IBM provides you with access to IBM databases containing information on known program defects, defect corrections, restrictions, and bypasses at no additional

charge. For further information, consult the IBM Software Support Handbook found at

<http://www.ibm.com/support/handbook>

IBM will maintain this information for at least one year after the original licensee acquires the program (warranty period).

Program technical support

Technical support of a program product version or release will be available for a minimum of five years from the general availability date, as long as your Software Maintenance is in effect. This technical support allows you to obtain assistance (via telephone or electronic means) from IBM for product-specific, task-oriented questions regarding the installation and operation of the program product. Software Maintenance also provides you with access to updates (modifications or fixes), releases, and versions of the program. You will be notified, via announcement letter, of discontinuance of support with 12 months' notice. If you require additional technical support from IBM, including an extension of support beyond the discontinuance date, contact your IBM representative or IBM Business Partner. This extension may be available for a fee.

Money-back guarantee

For clarification, note that if for any reason you are dissatisfied with the program and you are the original licensee, you may obtain a refund of the amount you paid for it, if within 30 days of your invoice date you return the program and its PoE to the party from whom you obtained it. If you downloaded the program, you may contact the party from whom you acquired it for instructions on how to obtain the refund.

For clarification, note that for programs acquired under the IBM International Passport Advantage Agreement, this term applies only to your first acquisition of the program.

Volume orders (IVO)

No

Passport Advantage applies

Yes, and through the Passport Advantage website at

<http://www.ibm.com/software/passportadvantage>

This product is only available via Passport Advantage. It is not available as shrinkwrap.

Usage restriction

Yes

<http://www.ibm.com/software/sla/sladb.nsf>

International Passport Agreement

Software Subscription and Support (Software Maintenance)

Yes. Software Subscription and Support (also referred to as Software Maintenance) is included with licenses purchased through Passport Advantage and Passport Advantage Express. Product upgrades and technical support are provided by the Software Subscription and Support (also referred to as Software Maintenance) offering as described in the Agreements. Product upgrades provide the latest

versions and releases to entitled software and Technical Support provides voice and electronic access to IBM support organizations, worldwide.

IBM includes one year of Software Subscription and Support (also referred to as Software Maintenance) with each program license acquired. The initial period of Software Subscription and Support (also referred to as Software Maintenance) can be extended by the purchase of a renewal option, if available.

While your Software Subscription and Support (also referred to as Software Maintenance) is in effect, IBM provides you assistance for your routine, short duration installation and usage (how-to) questions, and code-related questions. IBM provides assistance via telephone and, if available, electronic access, to your information systems (IS) technical support personnel during the normal business hours (published prime shift hours) of your IBM support center. (This assistance is not available to your end users.) IBM provides Severity 1 assistance 24 hours a day, 7 days a week. For additional details, consult your IBM Software Support Handbook at

<http://www.ibm.com/support/handbook>

Software Subscription and Support (also referred to as Software Maintenance) does not include assistance for the design and development of applications, your use of programs in other than their specified operating environment, or failures caused by products for which IBM is not responsible under the applicable agreements.

For additional information about the International Passport Advantage Agreement and the IBM International Passport Advantage Express Agreement, visit the Passport Advantage website at
