Overview

zEnterprise® BladeCenter® Extension and Linux™ on System z® part numbers are now available for SmartCloud Application Performance Management V7.5.

Key prerequisites

For details, refer to Software Announcement ZP12-0184, dated May 29, 2012.

Planned availability date

August 21, 2012

Availability of programs with encryption algorithm in France is subject to French government approval.

Cryptography in this product is limited to password encryption, authentication or digital signature.

Technical information

Specified operating environment

Software requirements

SmartCloud Application Performance Management V7.5 runs on the following operating systems:

- IBM® AIX® V5.2
• AIX V5.3
• AIX V6.1
• AIX V7.1
• Red Hat Enterprise Linux 4.0 AS/ES x86-64
• Red Hat Enterprise Linux 4.0 AS/ES System i®, System p®
• Red Hat Enterprise Linux 5.0 Advanced Platform x86-64
• Red Hat Enterprise Linux 5.0 Advanced Platform x86-32
• Red Hat Enterprise Linux 5.0 Advanced Platform System p
• Red Hat Enterprise Linux 5.0 for System z
• Red Hat Enterprise Linux Server 6 System p
• Red Hat Enterprise Linux Server 6 x86-32
• Red Hat Enterprise Linux Server 6 x86-64
• SUSE Linux Enterprise Server 10.0 IA64
• SUSE Linux Enterprise Server 11.0 IA64
• SUSE Linux Enterprise Server 9.0/10.0 System i®, System p
• SUSE Linux Enterprise Server 11.0 System i®, System p
• SUSE Linux Enterprise Server 8.0 x86-32
• SUSE Linux Enterprise Server 9.0 x86-32
• SUSE Linux Enterprise Server 10.0 x86-64
• SUSE Linux Enterprise Server 10.0 for System z
• SUSE Linux Enterprise Server 11.0 for System z
• SUSE Linux Enterprise Server 11.0 x86-32
• SUSE Linux Enterprise Server 11.0 x86-64
• Microsoft® Windows® 2003 Server
• Windows 2003 Server R2
• Windows 2008 Server
• Windows 2008 Server R2
• HP-UX 11i V2
• HP-UX 11i V3
• Oracle Solaris 9
• Solaris 10

Detailed platform support for each agent can be found at:

http://publib.boulder.ibm.com/infocenter/prodguid/v1r0/clarity/index.html

The program's specifications and specified operating environment information
may be found in documentation accompanying the program, if available, such as
a README file, or other information published by IBM, such as an announcement
letter. Documentation and other program content may be supplied only in the
English language.

Security, auditability, and control

The customer is responsible for evaluation, selection, and implementation of security
features, administrative procedures, and appropriate controls in application systems
and communication facilities.

Global Technology Services

Contact your IBM representative for the list of selected services available in your
country, either as standard or customized offerings for the efficient installation,
implementation, or integration of this product.
Ordering information

Customized Offerings

Product deliverables are shipped only via CBPDO, ServerPac, SystemPac®.

CBPDO and ServerPac are offered for Internet delivery in countries where ShopzSeries product ordering is available. Internet delivery reduces software delivery time and allows you to install software without the need to handle tapes. For more details on Internet delivery, refer to the ShopzSeries help information at

http://www.software.ibm.com/ShopzSeries
You choose the delivery method when you order the software. IBM recommends Internet delivery. In addition to Internet and DVD, the supported tape delivery options for CBPDO, ServerPac, and SystemPac, include:

- 3590
- 3592

Most products can be ordered in ServerPac and SystemPac the month following their availability on CBPDO. z/OS® can be ordered via all three offerings at general availability. Production of software product orders will begin on the planned general availability date.

- CBPDO shipments will begin one week after general availability.
- ServerPac shipments will begin two weeks after general availability
- SystemPac shipments will begin four weeks after general availability due to additional customization, and data input verification.

The terms and conditions for IBM SmartCloud Application Performance Management V7.5, as previously announced in Software Announcement ZP12-0184, dated May 29, 2012, are unchanged.

**Statement of good security practices**

IT system security involves protecting systems and information through prevention, detection, and response to improper access from within and outside your enterprise. Improper access can result in information being altered, destroyed, or misappropriated or can result in misuse of your systems to attack others. Without a comprehensive approach to security, no IT system or product should be considered completely secure and no single product or security measure can be completely effective in preventing improper access. IBM systems and products are designed to be part of a comprehensive security approach, which will necessarily involve additional operational procedures, and may require other systems, products, or services to be most effective. IBM does not warrant that systems and products are immune from the malicious or illegal conduct of any party.

**IBM Electronic Services**

IBM has transformed its delivery of hardware and software support services to help you achieve higher system availability. Electronic Services is a web-enabled solution that offers an exclusive, no-additional-charge enhancement to the service and support available for IBM servers. These services are designed to provide the opportunity for greater system availability with faster problem resolution and preemptive monitoring. Electronic Services comprises two separate, but complementary, elements: Electronic Services news page and Electronic Services Agent.

The Electronic Services news page is a single Internet entry point that replaces the multiple entry points traditionally used to access IBM Internet services and support. The news page enables you to gain easier access to IBM resources for assistance in resolving technical problems.

The Electronic Service Agent™ is no-additional-charge software that resides on your server. It monitors events and transmits system inventory information to IBM on a periodic, client-defined timetable. The Electronic Service Agent automatically reports hardware problems to IBM. Early knowledge about potential problems enables IBM to deliver proactive service that may result in higher system availability and performance. In addition, information collected through the Service Agent is made available to IBM service support representatives when they help answer your questions or diagnose problems. Installation and use of IBM Electronic Service Agent
for problem reporting enables IBM to provide better support and service for your IBM server.
