Overview

IBM® ILOG® Supply Chain Applications, which are built on IBM ILOG Optimization, can help companies build smarter supply chains by addressing the common challenges associated with global supply chain design and sourcing strategies, transportation planning, and the optimal flow and placement of inventory to reduce costs, free up working capital, and improve service levels. The ILOG Supply Chain Applications are:

- **IBM ILOG LogicNet Plus® XE** for network design and production sourcing. It helps determine the optimal number, location, territories, and size of warehouses, plants, and lines. It also helps determine where products should be made and helps optimize the carbon footprint.

- **IBM ILOG Inventory and Product Flow Analyst** for inventory optimization and product flow optimization. It determines push/pull locations, buffer locations, and postponement and inventory policy analysis. In the retail industry, it helps determine the best flow in a supply chain network based on inventory and transportation requirements. It also helps maintain the correct inventory levels on an ongoing basis.

- **IBM ILOG Transportation Analyst** for transportation planning. It helps determine the optimal routing for fleet sizing, multi-stop routes, and deliveries and collections (backhauls).

These applications are now available with pricing based on the Authorized User charge metric. This metric is intended to simplify quotes and to help you maintain entitlement compliance over time.

Together with the new metric, new Fixed Term License part numbers are also available. Fixed Term Licenses enable you to acquire ILOG Supply Chain Applications entitlements for a specific period of time. This option can benefit consulting firms by allowing them to limit their use of the products to the duration of a specific project.

Licensees of the Authorized User and Fixed Term License part numbers with the Service and Support option will have access to the latest product updates as incorporated in fix packs. Currently available updates include fixes and related improvements to:

- **ILOG LogicNet Plus XE**
  - Multi-objective modeling and optimization
  - Tactical planning
  - Data integration
  - User roles and project-level data permission
  - Integration API
  - Mapping and visualization
- Rateware XL support
- ILOG Transportation Analyst
  - Java™ and .NET APIs
  - Rateware XL support

Fix packs are available from Fix Central at

http://www.ibm.com/support/fixcentral/

For additional details about the ILOG Supply Chain Applications, refer to the announcements in the Reference information section.

**Planned availability date**

October 8, 2013

Availability of programs with encryption algorithm in France is subject to French government approval.

**Reference information**

For details about IBM ILOG LogicNet Plus XE, refer to Software Announcement ZP11-0466, dated October 04, 2011.

For details about IBM ILOG Transportation Analyst, refer to Software Announcement ZP11-0233, dated May 31, 2011.

For details about IBM ILOG Inventory and Product Flow Analyst, refer to Software Announcement ZP12-0279, dated June 05, 2012.

**Technical information**

**Specified operating environment**

**Hardware requirements**

This information is unchanged. Refer to the announcements in the Reference information section.

**Software requirements**

This information is unchanged. Refer to the announcements in the Reference information section.

The program's specifications and specified operating environment information may be found in documentation accompanying the program, if available, such as a readme file, or other information published by IBM, such as an announcement letter. Documentation and other program content may be supplied only in the English language.
Planning information

Installability

Software Subscription and Support

Software Subscription and Support (also referred to as Software Maintenance) is included with licenses purchased through Passport Advantage® and Passport Advantage Express®. Product upgrades and technical support are provided by the Software Subscription and Support (Software Maintenance) offering as described in the Agreements. Product upgrades provide the latest versions and releases to entitled software, and technical support provides voice and electronic access to IBM support organizations, worldwide.

IBM includes one year of Software Subscription and Support (also referred to as Software Maintenance) with each program license acquired. The initial period of Software Subscription and Support (Software Maintenance) can be extended by the purchase of a renewal option, if available.

Packaging

The products detailed in this announcement will be available in both ESD and packaged formats. Physical media is delivered on CDs or DVDs as follows:

<table>
<thead>
<tr>
<th>Description</th>

Authorized User

Authorized User is a unit of measure by which the program can be licensed. An Authorized User is a unique person who is given access to the program. The program may be installed on any number of computers or servers and each Authorized User may have simultaneous access to any number of instances of the program at one time. Licensee must obtain separate, dedicated entitlements for each Authorized User given access to the program in any manner directly or indirectly (for example, via a multiplexing program, device, or application server) through any means. An entitlement for an Authorized User is unique to that Authorized User and may not be shared, nor may it be reassigned other than for the permanent transfer of the Authorized User entitlement to another person.

Note: Some programs may be licensed where devices are considered users. In that case, the following applies. Any computing device that requests the execution of or receives for execution a set of commands, procedures, or applications from the program or that is otherwise managed by the program is considered a separate User of the Program and requires an entitlement as if that device were a person.

Terms and conditions

The terms and conditions are unchanged. Refer to the announcements in the Reference information section.

Statement of good security practices

IT system security involves protecting systems and information through prevention, detection, and response to improper access from within and outside your enterprise. Improper access can result in information being altered destroyed or misappropriated or can result in misuse of your systems to attack others. Without a comprehensive approach to security, no IT system or product should be considered
completely secure and no single product or security measure can be completely
effective in preventing improper access. IBM systems and products are designed
to be part of a comprehensive security approach, which will necessarily involve
additional operational procedures, and may require other systems, products, or
services to be most effective. IBM does not warrant that systems and products are
immune from the malicious or illegal conduct of any party.
