At a glance

This announcement provides the granularity to selectively delete certain feature codes if they are not allowed to be imported.

Overview

For countries that do not allow the import of certain original equipment manufacturer (OEM) devices, this announcement allows those OEM devices to be de-selected and not shipped by IBM. This way, only feature codes that are allowed will be included in shipped machines; items (devices) which make up the de-selected features must be sourced locally by the client with compatible devices.

Key prerequisites

Refer to the "Hardware requirements" and "Software requirements" sections in the base announcement.
