At a glance

The TS3100 and TS3200 Tape Libraries combine IBM® tape and automation reliability at open system prices. Both libraries are designed to support entry-level unattended backup, open system attachment flexibility, and enhanced capacity and performance.

The TS3100 and TS3200 Tape Libraries include support for:

- New IBM LTO Ultrium 5 Half-High and Full-High 6-Gb SAS and 8-Gb Fibre Channel Drives (#8244, #8245, #8247, #8248)
- The TS3100 can accommodate up to two Ultrium Half-High Tape Drives or one Ultrium Full-High Tape Drive with 24 cartridge slots in two removable magazines, including a standard one-cartridge I/O station, a remote management unit, and barcode reader
- The TS3200 can accommodate up to four Ultrium Half-High Tape Drives or two Ultrium Full-High Tape Drives with 48 data cartridge slots in four removable magazines, including a standard three-cartridge I/O station and barcode reader
- An increased maximum data transfer rate of up to 140 MB/sec native for each Ultrium 5 drive as compared to LTO Ultrium 4
- Up to 1.5 TB native physical capacity per cartridge (3.0 TB with 2:1 compression) with Ultrium 5 1.5 TB media
- Encryption on LTO Ultrium 5 and 4 SAS Tape Drives
- Supports LTO Ultrium 5 media partitioning and self describing tape
- Adherence to LTO specifications

Overview

The IBM System Storage™ TS3100 Tape Library Express® Model L2U (machine type 3573) and the IBM System Storage TS3200 Tape Library
Express Model L4U (machine type 3573) are designed to offer high capacity, enhanced performance, and technology for the midrange open system environments in selected countries only. The products are included as part of the IBM System Storage tape library family of offerings.

The TS3100 and TS3200 now incorporate the new IBM Linear Tape-Open (LTO) Ultrium 5 Half-High and Full High 6-Gb SAS and 8-Gb Fibre Channel Drives, enhancing tape performance over the previous generation IBM LTO Ultrium 4 Tape Drives, with a native data transfer rate of up to 140 MB/sec. Mixed Ultrium generations and attachment Tape Drive types are supported where drive space is available. IBM new Ultrium 5 SAS and Fibre Channel tape drives are encryption capable. IBM Tivoli® Key Lifecycle Manager V1 (TKLM) is required for encryption key management with LTO Ultrium 5 drives. The TS3100 and TS3200 Tape Libraries incorporate IBM’s Multi-Path Architecture with logical libraries equal to the number of drives installed. Ultrium 5 Tape Drives for the TS3100 and TS3200 Tape Libraries are only available as feature code options in AAS.

By using the IBM LTO Ultrium 5 1.5 TB Data Cartridge, the Ultrium 5 Tape Drive has the capability of writing nearly twice as much data, up to 1.5 TB native physical capacity (3.0 TB with 2:1 compression), compared to the Ultrium 4 Tape Drive. IBM Ultrium 5 Tape Drives can read and write LTO Ultrium 4 Data Cartridges and can read Ultrium 3 Data Cartridges.

The TS3100 Tape Library can accommodate up to two LTO Ultrium Half-High Tape Drives or one LTO Ultrium Full-High Tape Drive and comes standard with two removable cartridge magazines, one on the left side (12 data cartridge slots) and one on the right (12 data cartridge slots). The left magazine includes a single cartridge I/O station designed to allow for continuous library operation while importing or exporting media. A remote management unit and a barcode reader are standard in the library, allowing the library to run in sequential or random access mode. Optional features available include a rack mount kit, additional attachment cables, transparent LTO encryption, path failover, additional drives, interposers, and power cords.

The TS3200 Tape Library can accommodate up to four LTO Ultrium Half-High Tape Drives or two LTO Ultrium Full-High Tape Drives and comes standard with four removable cartridge magazines, providing 48 data cartridge slots, including a three-slot I/O station. A remote management unit and a barcode reader are standard in the library, allowing the library to run in sequential or random access mode. Optional features available include a rack mount kit, an additional power supply, additional removable cartridge magazines, transparent LTO encryption, path failover, additional drives, attachment cables, interposers, and power cords.

**Key prerequisites**

Appropriate levels of host software are required to attach and support the TS3100 or TS3200 Tape Library with IBM LTO Ultrium 5 Tape Drives to selected IBM Power®, IBM System p®, IBM System i®, IBM System z®, IBM System x®, HP-UX, Sun, UNIX®, Linux®, and Windows® servers. Refer to the [Technical information](#) for details.

**Planned availability date**

May 21, 2010
The TS3100 and TS3200 Tape Libraries are external stand-alone or rack-mountable units that contain LTO Ultrium tape drives that are designed for the heavy demands of backup tape storage.

**TS3100 Tape Library**

The TS3100 capacity is 24 tape cartridges and support for:

- A single IBM LTO Ultrium 5 Full-High Tape Drive with SAS or Fibre Channel attachment and (up to two) IBM LTO Ultrium 5 Half-High Tape Drives with SAS or Fibre Channel attachment
- A single IBM LTO Ultrium 4 Full-High Tape Drive with SAS, SCSI, or Fibre Channel attachment and (up to two) IBM LTO Ultrium 4 Half-High Tape Drives with SAS attachment
- A single IBM LTO Ultrium 3 Full-High Tape Drive with SAS, SCSI, and Fibre Channel attachment and (up to two) IBM LTO Ultrium 3 Half-High Tape Drives with SAS or SCSI attachment
- Or combination of IBM LTO Ultrium Full-High Tape Drives up to a maximum of one or IBM LTO Ultrium Half-High Tape Drives up to a maximum of two

The TS3100 Tape Library offers the following significant improvements over existing 2U Tape Libraries:

- **Increased cartridge capacity:** The TS3100 is configured to hold two removable magazines, one on the left side (11 + 1 slots) and one on the right side (12 slots) for a total of 24 data cartridges.
- **Standard barcode reader:** With the addition of the standard bar code reader, you will be able to operate the TS3100 as a random access tape library with labeled media. Labeled Ultrium media can be ordered at the time of purchase via the 3589 LTO Ultrium media machine type. Refer to the Supplies section for additional information.
- **I/O station:** Standard on the TS3100 is a single-cartridge I/O station on the left cartridge magazine, which is designed to allow for continuous library operation during import or export of data cartridges.
- **Removable cartridge magazines:** The TS3100 has two removable magazines that house 24 data cartridges. This helps allow for quick population of the tape library, as well as ease of storage for media. You may order additional magazines as an option.
- **Customer replacement units (CRUs):** Drives, power supply, cartridge magazines are customer replacement parts.

**TS3200 Tape Library**

The TS3200 capacity is 48 tape data cartridges and support for:

- A single IBM LTO Ultrium 5 Full-High Tape Drive with SAS or Fibre Channel attachment and (up to two) IBM LTO Ultrium 5 Half-High Tape Drives with SAS or Fibre Channel attachment
- Up to two IBM LTO Ultrium 4 Full-High Tape Drives with SAS, SCSI, or Fibre Channel attachment and (up to four) IBM LTO Ultrium 4 Half-High Tape Drives with SAS attachment
- Up to two IBM LTO Ultrium 3 Full-High Tape Drives with SAS, SCSI, or Fibre Channel attachment and (up to four) IBM LTO Ultrium 3 Half-High Tape Drives with SAS and SCSI attachment
- Or combination of IBM LTO Ultrium Full-High Tape Drives up to a maximum of two or IBM LTO Ultrium Half-High Tape Drives up to a maximum of four

The TS3200 Tape Library offers the following significant improvements over existing 4U Tape Libraries:

- **Increased cartridge capacity** The TS3200 is configured to hold four removable magazines, providing 48 data cartridges, including a three-slot I/O station.
- **Standard barcode reader** With the addition of the standard bar code reader, you will be able to operate the TS3200 as a random access tape library with labeled media. Labeled Ultrium 4 media can be ordered at time of purchase via the 3589 LTO Ultrium media machine type. Refer to the Supplies section, for additional information.
- **I/O station** Standard on the TS3200, a three-slot I/O station on the lower-left cartridge magazine, which is designed to allow for continuous library operation during import or export of data cartridges.
- **Removable cartridge magazines** The TS3200 has four removable magazines which help allow for quick population of the tape library, as well as ease of storage for media. You may order additional magazines as an option.
- **CRUs** Drives, power supply, and cartridge magazines are customer replacement parts.

**TS3100 and TS3200 Tape Libraries**

The IBM LTO Ultrium 5 Tape Drive is the fifth-generation LTO Ultrium Tape Drive in the IBM LTO Ultrium family of products. The Ultrium 5 Tape Drive in the TS3100 and TS3200 offer the following significant improvements over the Ultrium 4 Tape Drive:

- **Increased performance** Maximum tape drive throughput native data rate performance is up to 140 MB/sec. Data tracks are written 16 at a time. IBM Ultrium 5 Tape Drives can read and write LTO Ultrium 4 Data Cartridges at Ultrium 4 capacities and rates, and read LTO Ultrium 3 Data Cartridges at Ultrium 3 capacities with improved rates.

  **Note:** Although the Ultrium 5 Tape Drive provides the capability for excellent tape performance, other components of the system may limit the actual performance achieved. Also, although the compression technology used in the tape drive can typically double the amount of data that can be stored on the media, the actual degree of compression achieved is highly sensitive to the characteristics of the data being compressed.

- **Increased tape cartridge capacity** The tape cartridge physical capacity is up to 1.5 TB native physical capacity (3.0 TB with 2:1 compression), with the use of the new IBM LTO Ultrium 5 1.5 TB Data Cartridge, nearly double that of the Ultrium 4 Data Cartridge. This is achieved by increasing the linear density and the media length. The tape itself is an advanced metal particle tape developed to help provide durability and capacity.

- **Ultrium 4 cartridge compatibility** The Ultrium 5 Tape Drive can read and write Ultrium 4 cartridges.

- **Encryption supported on Ultrium 5 and 4 Fibre Channel and SAS tape drives:** The IBM System Storage TS3100 and TS3200 Tape Libraries support data encryption on the base drive with Ultrium 5 and 4 media meeting LTO consortium specifications and Application Managed encryption. System Managed and Library Managed Encryption are supported with the Transparent LTO Encryption feature (Feature #5900). IBM Tivoli Key Lifecycle Manager v1 (TKLM) is required for encryption key management with LTO Ultrium 5 drives.

- **Attachment options** The TS3100 and TS3200 Tape Libraries come with 6 Gbps SAS or 8 Gbps Fibre Channel LTO5 tape drive attachment for connection to a wide spectrum of open system servers. They are supported on IBM POWER®, System
WORM media support: The IBM 3589 Ultrium 5 1.5 TB WORM Tape Cartridges are designed for archiving and data retention applications as well as those applications requiring an audit trail. These cartridges work with the IBM LTO Ultrium 5 Tape Drive to help prevent the alteration or deletion of user data. IBM Ultrium 5 1.5 TB WORM Tape Cartridges can be ordered as unique 3589 models with the following features:

- Pre-labeling, with the ability to specify a starting volume serial and color-coding
- Packaging in individual jewel cases or in bulk
- Cartridge memory, built into every cartridge, which helps to enhance functionality and media reliability by storing access history and media performance information for use by the tape drive every time the cartridge is accessed
- Half-inch particle tape with a 800 GB WORM native capacity in a single cartridge

Larger internal data buffer: There is a 512 MB internal data buffer in the Ultrium 5 Full-High Tape Drive or 256 MB internal data buffer in the Ultrium 5 Half-High Tape Drive.

Digital speed matching: The Ultrium 5 Tape Drive is designed to perform dynamic speed matching at one of 14 speeds to adjust the drive's native data rate as closely as possible to the net host data rate (after data compressibility has been factored out). This helps reduce the number of backhitch repositions and improve throughput performance. Speed matching on Ultrium 5 ranges from 40 to 140 MB/sec versus 30 to 120 MB/sec on Ultrium 4.

Giant Magneto Resistive (GMR) head design: LTO 5 introduces the Giant Magneto Resistive (GMR) head with beveled contouring for reducing stiction/friction, especially with smoother LTO5 media type. This head design is well proven in Enterprise Tape products and helps minimize contact, edge damage, debris accumulation, and wear on the tape as it moves over the read/write heads.

Dual-stage 16-channel head skew actuator: The actuator for the LTO 5 Full-High drive is designed to provide precision head alignment to help skew to enable the head to follow skew tape motion and improve linear actuation.

Power management: The Ultrium 5 Tape Drive power management function is designed to control the drive electronics to be either completely turned off or in a low-power mode when the circuit functions are not needed for drive operation. Improvements specifically in idle mode are improved over Ultrium 4.

Proven IBM LTO Ultrium features in the IBM LTO Ultrium 4 Tape Drive include:

- Servo and track layout technology: There are 1280 data tracks in Ultrium 5 versus 896 data tracks in Ultrium 4. The high-bandwidth servo system features a low-mass servo to help more effectively track servo bands and improve data throughput with damaged media in less-than-optimal shock and vibration environments.

- Surface Control Guiding Mechanism: IBM's patented Surface Control Guiding Mechanism is designed to guide the tape along the tape path in the Ultrium 5 and 4 Tape Drive. This method is designed to use the surface of the tape, rather than the edges, to control tape motion. This helps reduce tape damage (especially to the edges of the tape) and tape debris, which comes from the damaged edges and can accumulate in the head area.

- Robust drive components optimized for automation environments: Using some of the most robust components available, such as all-metal clutch, steel ball bearings in loader, robust leader block design, and single circuit card, to help enhance reliability and prolong the life of the drives.

- Separate writing of multiple filemarks: Separate writing of multiple filemarks is designed to evoke any write command of two or more filemarks to cause a separate data set to be written containing all filemarks after the first. It helps improve performance if a subsequent append overwrites somewhere after the first filemark. This change helps prevent having to rewrite data sets containing customer data and the first filemark if such an append occurs.

- LTO Data Compression (LTO-DC): The Ultrium 4 uses LTO-DC, which is an implementation of a Lempel-Ziv class 1 (LZ-1) data compression algorithm.
LTO-DC is an extension of Adaptive Lossless Data Compression (ALDC) and an improvement over previous IBM lossless compression algorithms. IBM's patented "Scheme-Swapping" compression is designed to look ahead at incoming data, and determine the most efficient storage method (either ALDC or pass-through mode) to help optimize data compression and increase data throughput.

- **LTO Cartridge Memory (LTO-CM):** Contained within the LTO Ultrium data cartridge is the LTO-CM, which is a passive, contactless silicon storage device that is physically a part of the cartridge. The LTO-CM is designed to hold information about that specific cartridge, the media in the cartridge, and the data on the media. The storage capacity of the LTO-CM is 8 KB. Communication between the drive and the LTO-CM is via a low-level RF field transmitted by the drive to the cartridge.

- **Statistical Analysis and Reporting System (SARS):** The Ultrium 4 Tape Drive uses SARS to help isolate failures between media and hardware. SARS uses the cartridge performance history saved in the CM module and the drive performance history kept in the drive flash EEPROM to help determine the likely cause of failure. SARS is designed to cause the drive to request a cleaner tape, to mark the media as degraded, and to indicate that the hardware has degraded.

- **Highly integrated electronics using IBM engineered copper technology:** This technology is designed to reduce the total number of components in the drive, help lower chip temperatures, and reduce power requirements, helping to provide for a more reliable drive. The fourth-generation drive electronics are designed to provide error correction of soft errors in the memory arrays in data and control paths.

**Ultrium 1.5 TB Data Cartridge:**

The tape cartridge physical capacity of the IBM Ultrium 1.5 TB Data Cartridge has nearly doubled over the IBM Ultrium 800 GB Data Cartridge to 1.5 TB native physical capacity (3.0 TB with 2:1 compression). IBM LTO Ultrium 5 Tape Drives can read and write Ultrium 4 data cartridges, and read only Ultrium 3 data cartridges. LTO Ultrium 1.5 TB data cartridges can be ordered using machine type 3589, LTO Ultrium tape cartridges or feature #8505 at the time of purchase.

These cartridges have been designed to provide several enhancements over previous tape technologies. They are designed to work with tape drives that have increased tape speeds and high-density data recording. The case is specially designed for use in automated libraries and is designed for repeated, unattended handling. The tape itself is an advanced metal particle tape developed for durability and capacity.

**Path failover option**

With the introduction of IBM LTO Ultrium 5 Tape Drive support, the TS3100 and TS3200 Tape Libraries will support Control Path Failover and Data Path Failover for all generations of IBM LTO Ultrium Half-High Tape Drives.

**Multi-Path support**

The Multi-Path feature of the libraries support sharing of the library robotics. The library can be partitioned into one or two logical libraries and can provide each logical library its own separate and distinct drives, storage slots, and control paths. You can partition the library into as many logical libraries as there are drives in the library. Each logical library must contain at least one drive.

**Note:** This type of partitioning is designed to allow heterogeneous applications to share the library robotics independent of each other. Cartridges under library control are not shared between logical libraries, nor allowed to be moved between logical libraries. An example of heterogeneous sharing is a Microsoft Windows application using the drive and storage slots of one logical library while a UNIX application uses the drive and slots of another logical library.
Accessibility by people with disabilities

A U.S. Section 508 Voluntary Product Accessibility Template (VPAT) containing details on accessibility compliance can be requested at

Product positioning

As you compare competitive tape solutions, consider:

- Capacity and performance requirements
- Data protection, reliability, and availability
- Storage usage and application requirements
- Affordability
- Loyalty to legacy or existing tape formats
- Security and encryption
- Work environment - limited space

The TS3100 and TS3200 Tape Libraries and storage management applications help address these requirements and constitute a functionally rich tape storage solution incorporating LTO Ultrium tape technology. The libraries are designed to give you flexibility of tape library management and unattended save and restore operations. The TS3100 or TS3200 are excellent solutions if you use tape or require a larger-capacity or higher-performance tape backup with or without random access. They are excellent choices for tape automation for IBM Power, System p, System i, System x, System z, HP-UX, Sun, UNIX, Linux, and Windows servers. The TS3100 offers one IBM Ultrium Full-High Tape Drive or up to two IBM LTO Ultrium Half-High Tape Drives, 24 cartridge slots (including one-cartridge I/O station). The TS3200 offers up to two IBM LTO Ultrium Full-High Tape Drives or up to four IBM LTO Ultrium Half-High Tape Drives and 48 cartridge slots (including a three-cartridge I/O station). The TS3100 and TS3200 can be the answers to growing storage requirements and shrinking backup windows, and are part of a family of IBM System Storage LTO Ultrium tape products. These products constitute excellent tape storage solutions if you have an existing digital linear tape experience or require high-performance automated tape backup. For lower capacity requirements with less than 24 or 48 cartridges, the IBM System Storage TS2900 Tape Autoloader and the IBM System Storage TS2250 or TS2350 or 3580 Tape Drive should be considered.

For larger capacity requirements greater than 48 cartridges, with drives and cartridge capacity scalability, the IBM System Storage TS3510 Tape Library (machine type 3576) should be considered. Customers can now tailor the TS3310 Tape Library to match system capacity and performance needs with up to 18 IBM LTO Ultrium tape drives total in an L5B plus four E9U systems.

For even larger capacity requirements, the IBM System Storage TS3500 Tape Library (machine type 3584) should be considered. The 3584 Tape Library can address system capacity using up to 192 IBM Ultrium Tape Drives in up to sixteen 3584 library frames.

For protection of mission-critical data needs, hardware optimized for enterprise multimode and host attachment, high duty-cycle and start/stop intensive tape applications, consider the IBM System Storage TS1120 or TS1130 Tape Drive with the IBM System Storage TS3400 (3577) or IBM System Storage TS3500 (3584) Tape Library.

Services

Global Technology Services

IBM services include business consulting, outsourcing, hosting services, applications, and other technology management.

These services help you learn about, plan, install, manage, or optimize your IT infrastructure to be an On Demand Business. They can help you integrate your high-speed networks, storage systems, application servers, wireless protocols, and an array of platforms, middleware, and communications software for IBM and many non-IBM offerings. IBM is your one-stop shop for IT support needs.

For details on available services, contact your IBM representative or visit

http://www.ibm.com/services/

For details on available IBM Business Continuity and Recovery Services, contact your IBM representative or visit

http://www.ibm.com/services/continuity

For details on education offerings related to specific products, visit

Physical specifications

3573 Model L2U

- Width:
  - Rack mount 447.5 mm (17.6 in)
  - Stand-alone 447.5 mm (17.6 in)
- Depth:
  - Rack mount 740 mm (29.13 in)
  - Stand-alone 810 mm (31.9 in)
- Height:
  - Rack mount 87.6 mm (3.44 in)
  - Stand-alone 97.6 mm (3.84 in)
- Maximum Weight: 15.6 kg (34.3 lb) without rack mount

3573 Model L4U

- Width:
  - Rack mount 447.5 mm (17.6 in)
  - Stand-alone 447.5 mm (17.6 in)
- Depth:
  - Rack mount 740 mm (29.13 in)
  - Stand-alone 810 mm (31.9 in)
  - Height:
    - Rack mount 175.2 mm (6.9 in)
    - Stand-alone 185.2 mm (7.3 in)
- Maximum Weight: 21.3 kg (47 lb) without rack mount

To assure installability and serviceability in non-IBM industry-standard racks, review the installation planning information for any product-specific installation requirements.

Operating environment

3573 Model L2U

- Temperature: 10 to 35° C, 50 to 95° F
- Relative humidity: 15% RH to 80% RH (non-condensing)
- Wet bulb: 26° C (79.0° F) maximum
- Voltage: 100 to 240 V ac, 50 to 60 Hz auto-ranging
- Electrical power:
  - 4.0 amps at 100 V ac
  - 2.0 amps at 240 V ac
  - 0.1 kVA
- Maximum acoustical noise sound power levels LwAd in bels: 6.6/6.8
- Heat output: 100 watts (86 KCal/Hr.)
3573 Model L4U

- Temperature: 10 to 35° C, 50 to 95° F
- Relative humidity: 15% RH to 80% RH (non-condensing)
- Wet bulb: 26° C (79.0° F) maximum
- Voltage: 100 to 240 V ac, 50 to 60 Hz auto-ranging
- Electrical power:
  - 4.0 amps at 100 V ac
  - 2.0 amps at 240 V ac
  - 0.1 kVA

- Heat output: 100 watts (86 KCal/hr)

**Hardware requirements**

The TS3100 and TS3200 Tape Libraries come with raven black covers.

The TS3100 Model L2U and TS3200 Model L4U support the new Ultrium 4 Half-High SAS Tape Drive and can be attached to System p, AIX®, Linux, and Windows servers, and non-IBM servers, workstations, and personal computers that support those interface specifications.

A current list of supported open system configurations is available at

http://www.ibm.com/storage/tape/lto

Select the model, "Product Details," then "Independent Software Vendor (ISV) matrix for LTO" for the product.

A power cord feature number, if applicable, should also be specified.

The TS3200 comes with one power supply and an additional power supply can be added with the following feature:

- Additional Power Supply (Feature #1901)

If ordered as an option, the Additional Power Supply will come with a power cord based on the original order. If the Additional Power Supply feature is ordered, then two power cords will be supplied based on the power cord feature ordered.

**Cables**

Cables are required to attach tape drives in the TS3100 or TS3200 Tape Library to each server connection (up to the number of tape drives installed).

An interposer may also be required for attachment to various server adapters. One or more of the following Fibre Channel or SAS cables should be specified on the TS3100 or TS3200.

**Fibre Channel cables**

A Fibre Channel cable is required to attach a TS3100 or TS3200 Tape Library with Fibre Channel Ultrium Tape Drives to host Fibre Channel adapters, Fibre Channel switches, or other Fibre Channel components. At least one Fibre Channel cable should be specified on the initial Fibre Channel drive plant order. The IBM Ultrium 5 (8 Gbps) Fibre Drive comes with an LC Duplex connector.

Features for specifying Fibre Channel cables and their respective lengths are as follows:

- Feature #6013 - 13M LC-LC Fibre Channel Cable
- Feature #6025 - 25M LC-LC Fibre Channel Cable
SAS cables: A SAS cable is required to attach a TS3100 or TS3200 to the server host bus SAS adapter. SAS/Mini-SAS cables provide attachment from HBA with SFF-8470 to drives with SFF-8088. Mini-SAS/Mini-SAS cables provide attachment from HBA SFF-8088 to drives with SFF-8088. At least one SAS cable should be specified on the initial plant order.

The following cable options are available for SAS attachment:

- 2.0 m SAS/Mini-SAS 1x Cable (from HBA with SFF-8470 to drive with SFF-8088) (Feature #5402)
- 2.0 m Mini-SAS/Mini-SAS 1x Cable (from HBA with SFF-8088 to drive with SFF-8088) (Feature #5502)

SAS Interposers

A 1x4 interposer with either SAS/Mini-SAS or Mini-SAS/Mini-SAS connectors is available for connecting up to four Mini-SAS/Mini-SAS 1x cables and their respective SAS drives to a single host bus adapter port. Mini-SAS/Mini-SAS 1x cable (feature #5502) connect the interposer to the drive, and needs to be ordered separately.

The following interposers are available:

- SAS/Mini-SAS 4x Interposer (from HBA with SFF-8470 to maximum four cables with SFF-8088) (Feature #5400)
- Mini-SAS/Mini-SAS 4x Interposer (from HBA with SFF-8088 to maximum four cables with SFF-8088) (Feature #5500)

Refer to the Specify or Special features section of the Sales Manual for a detailed description of the above features

Software requirements

For a current list of host software versions and release levels that support the TS3100 or TS3200, visit

http://www-1.ibm.com/storage/tape/lto

Select the model, then "Product Details," "Independent Software Vendor (ISV) matrix for LTO" for the product.

Tivoli Storage Manager and other compatible software offerings can provide storage and tape management software for the TS3100 or TS3200. Supporting software and applications must be obtained separately from IBM, IBM Business Partners, or independent software vendors (ISVs). A list of compatible software is available from your IBM representative or at

http://www-1.ibm.com/storage/tape/lto

Select the model, "Product Details," then "Independent Software Vendor (ISV) matrix for LTO" for the product.

IBM continues to work together with the ISVs to support the TS3100 and TS3200. Individual application vendors should be contacted for specific information and availability dates.

Note: All new IBM tape device drivers will only be posted to the web through the Fix Central download portal and not through the ftpsite. The Device Driver FTP Site will be sunset June 2010.

IBM maintains the latest levels of System Storage tape drive and library device drivers and documentation on the Internet. Utilize the Fix Central download portal by accessing the following Web site

http://www.ibm.com/support/fixcentral

There are a few pull down menus to navigate to the correct down- load as follows:
• In the first pull down menu labeled "Product Group" select "Storage Systems".
• In the next pull down menu that appears which is labeled "Product Family" select "Tape Systems".
• With the next pull down menu, "Product Type", select "Tape Device Drivers and Software".
• This will in turn bring up the "Product" menu, which provides selections for "Platform drivers, Tools, or Software".
• Under "Platform drivers", in order to download your driver, select the correct operating system.
• Two more pull down menus will appear with information. Click "Continue".
• The next screen can be used to narrow the search, however just click "Continue" to view what is available.

The IBM Tape Device Drivers Installation and User's Guide can be found at the following Web site

http://www-01.ibm.com/support/docview.wss?rs=577&uid=ssg1S7002972

LTO Ultrium 5 Encryption

Encryption for the TS3100/TS3200 Tape Library, with SAS and Fibre Channel versions of the IBM LTO Ultrium 5 and Ultrium 4 Tape Drive is provided in AIX, HP-UX, Linux, Sun Solaris, and Microsoft Windows 2003 operating system environments.

The installation of a Ultrium 5 Tape Drive with encryption may require code updates for System p and supported open systems device drivers or storage management software. An update of the open systems device drivers can be obtained via anonymous FTP from

Look under the directory storage/devdvr.

For details on supported software versions and release levels for the Ultrium 5 Tape Drive, as well as hardware support information, refer to the following Web site

http://www.ibm.com/storage/tape

Three modes of encryption management are supported:
• System Managed (available for AIX, Linux, Solaris, Windows)
• Library Managed (available for OS/400®, i5/OS®, AIX, Linux, HP-UX, Solaris, and Windows)
• Application Managed (IBM Tivoli Storage Manager)

For LTO Ultrium 5, the IBM Tivoli Key Lifecycle Manager v1.0 is required for enabling System Managed and Library Managed Encryption.

Compatibility

The IBM LTO Ultrium 5 Tape Drives can read and write IBM LTO Ultrium 4 and 5 Data Cartridges and read IBM LTO Ultrium 3 Data Cartridges. The LTO Ultrium 1.5 TB Data Cartridges can only be used on the IBM LTO Ultrium 5 Tape Drives.

Limitations

SAS cable lengths are limited to a maximum of 6 meters (20 ft).

Fibre channel cable lengths are limited to 500 meters (1650 ft).

The TS3100 or TS3200 Tape Library operating environment must not conflict with media operating and storage requirements. If media is stored in the TS3100 or
TS3200 Tape Library for more than 10 hours, the media storage temperature requirements must be met.

### Planning information

#### Customer responsibilities

Physical installation and service planning is a customer responsibility. Detailed planning information is in the *IBM System Storage TS3100/TS3200 Tape Library Setup, Operator, and Service Guide* (GA32-0545). The TS3100 and TS3200 Tape Libraries are designated as a customer setup unit (CSU). It is the customer’s responsibility to install and service, if required, the unit. Customers are responsible for obtaining the appropriate adapters, cables, and interposers (if required) for system attachment. Customers are also responsible for ordering media. For optimum performance, the customer must obtain the latest level of firmware prior to installing the unit and must update the unit as new firmware release become available.

Customers can download the latest level of drive and library firmware from the LTO Web site

http://www.ibm.com/storage/tape/lto

**Note:** IBM offers IBM Installation and Maintenance support at an additional cost if the customer does not wish to install or maintain the TS3100 or TS3200 Tape Library.

You are responsible for downloading or obtaining from IBM, and installing designated Machine Code (microcode, basic input/output system code (called "BIOS"), utility programs, device drivers, and diagnostics delivered with an IBM machine) and other software updates in a timely manner from an IBM Internet Web site or from other electronic media, and following the instructions that IBM provides. You may request IBM to install Machine Code changes; however, you may be charged for that service.

#### Cable orders

A SAS cable for IBM Ultrium 5 SAS Tape Drives is required to attach the TS3100 or TS3200 to the server. At least one cable should be specified on the initial plant order with the SAS Drive feature. An interposer or interposers may be required for attachment to various server adapters. Customers are responsible for selecting and ordering the correct cables and interposers to match the IBM LTO Ultrium Tape Drive interface and the server interface.

A Fibre Channel cable is required to attach a TS3100 or TS3200 Tape Library with Fibre Channel Ultrium Tape Drives to host Fibre Channel adapters, Fibre Channel switches, or other Fibre Channel components. At least one Fibre Channel cable should be specified on the initial Fibre Channel drive plant order. The IBM Ultrium 5 (8 Gbps) Fibre Drive comes with an LC Duplex connector.

Refer to the **Cables** section at the end of *Hardware requirements* for a list of available cables and interposers.

Refer to the **Specify or Special Features** section of the TS3100 or TS3200 Sales Manual for a detailed description of the cables and interposers available.

#### Installability

Installation time for the IBM System Storage TS3100 Tape Library Model L2U, when rack-mounted, is approximately 3.5 to 4 hours, and when stand-alone, installation is approximately 1.5 hours.

Installation time for the TS3200 Tape Library is approximately four hours. Installation time for an additional tape drive installed in the TS3200 Tape Library is approximately one hour.

**Supplies**

**For end users and remarketers:**

The LTO Ultrium 5 1.5 TB Data Cartridges (feature #8505) and the IBM LTO Cleaning Cartridge (feature #8002) can be purchased from IBM with the initial order. IBM media can also be ordered directly through AAS using Machine Type 3589. Refer to the 3589 Sales Manual for further information.

**Security, auditability, and control**

The customer is responsible for evaluation, selection, and implementation of security features, administrative procedures, and appropriate controls in application systems and communications facilities.

**Global Technology Services**

Contact your IBM representative for the list of selected services available in your country, either as standard or customized offerings, for the efficient installation, implementation, and/or integration of this product.
Terms and conditions

**MES discount applicable**
Equal to the volume commitment discount

**Field installable feature**
Yes

**Warranty period**
Three years. IBM Ultrium media is warranted separately.

IBM options or features assume the same warranty or maintenance terms as the machine in which it is installed for the full warranty or maintenance period announced for such machine.

**Note:** Any other warranty period requires review and approval from Contracts & Negotiations

This feature assumes the same warranty or maintenance terms as the machine in which it is installed for the remainder of the warranty or maintenance period for such machine.

**Customer setup**
Yes

**Machine code**
Same license terms and conditions as base machine

Prices

For all local charges, contact your IBM representative.
