About this document

This document describes the Internet Protocol (IP) messages that occur in z/OS Communications Server. The information in this document supports both IPv6 and IPv4. Unless explicitly noted, information describes IPv4 networking protocol. IPv6 support is qualified within the text.

For information about how to set up, initialize, and customize your Transmission Control Protocol/Internet Protocol (TCP/IP) services system, see the z/OS Communications Server: IP Configuration Reference, the z/OS Communications Server: IP Configuration Guide and the z/OS Communications Server: IP Programmer’s Guide and Reference. For information about how to use the applications on your TCP/IP system, see z/OS Communications Server: IP User’s Guide and Commands.

This document refers to Communications Server data sets by their default SMP/E distribution library name. Your installation might, however, have different names for these data sets where allowed by SMP/E, your installation personnel, or administration staff. For instance, this document refers to samples in SEZAINST library as simply in SEZAINST. Your installation might choose a data set name of SYS1.SEZAINST, CS390.SEZAINST or other high level qualifiers for the data set name.

Who should read this document

This document assists TCP/IP operators, system programmers, and users to:

- Analyze a problem
- Classify the problem as a specific type
- Describe the problem to the IBM® Software Support Center

Familiarity with TCP/IP concepts and terms is assumed.

How this document is organized

The messages are listed in alphanumeric order by message ID. For each message ID, the books contains the text and a description of the message. This book contains the following chapters:

- Chapter 2, “EZA0xxxx messages,” on page 7 contains messages in the EZA0xxxx range.
- Chapter 3, “EZA1xxxx messages,” on page 51 contains messages in the EZA1xxxx range.
- Chapter 4, “EZA2xxxx messages,” on page 127 contains messages in the EZA2xxxx range.
- Chapter 5, “EZA3xxxx messages,” on page 345 contains messages in the EZA3xxxx range.
- Chapter 6, “EZA4xxxx messages,” on page 385 contains messages in the EZA4xxxx range.
- Chapter 7, “EZA5xxxx messages,” on page 511 contains messages in the EZA5xxxx range.
- Chapter 8, “EZA6xxxx messages,” on page 825 contains messages in the EZA6xxxx range.
- Chapter 9, “EZA8xxxx messages,” on page 1009 contains messages in the EZA8xxxx range.
- Chapter 10, “EZA9xxxx messages,” on page 1157 contains messages in the EZA9xxxx range.
- Chapter 11, “EZA1Nxx messages,” on page 1237 contains messages in the EZAINxx range.
- Chapter 12, “EZAOPxx messages,” on page 1239 contains messages in the EZAOPxx range.
- Appendix A, “Additional information about remote procedure call (RPC) messages,” on page 1245 contains information about remote procedure call messages.
- Appendix B, “Related protocol specifications,” on page 1247 lists the related protocol specifications for TCP/IP.
- Appendix C, “Accessibility,” on page 1267 describes accessibility features to help users with physical disabilities.
How to use this document

To use this document, you should be familiar with z/OS TCP/IP Services and the TCP/IP suite of protocols.

How to contact IBM service

For immediate assistance, visit this website: http://www.software.ibm.com/support

Most problems can be resolved at this website, where you can submit questions and problem reports electronically, and access a variety of diagnosis information.

For telephone assistance in problem diagnosis and resolution (in the United States or Puerto Rico), call the IBM Software Support Center anytime (1-800-IBM-SERV). You will receive a return call within 8 business hours (Monday – Friday, 8:00 a.m. – 5:00 p.m., local customer time).

Outside the United States or Puerto Rico, contact your local IBM representative or your authorized IBM supplier.

If you would like to provide feedback on this publication, see “Communicating your comments to IBM” on page 1279.

Conventions and terminology that are used in this information

Commands in this information that can be used in both TSO and z/OS UNIX environments use the following conventions:

• When describing how to use the command in a TSO environment, the command is presented in uppercase (for example, NETSTAT).
• When describing how to use the command in a z/OS UNIX environment, the command is presented in bold lowercase (for example, netstat).
• When referring to the command in a general way in text, the command is presented with an initial capital letter (for example, Netstat).

All the exit routines described in this information are installation-wide exit routines. The installation-wide exit routines also called installation-wide exits, exit routines, and exits throughout this information.

The TPF logon manager, although included with VTAM®, is an application program; therefore, the logon manager is documented separately from VTAM.

Samples used in this information might not be updated for each release. Evaluate a sample carefully before applying it to your system.

Note: In this information, you might see the following Shared Memory Communications over Remote Direct Memory Access (SMC-R) terminology:

• RoCE Express®, which is a generic term representing IBM 10 GbE RoCE Express, IBM 10 GbE RoCE Express2, and IBM 25 GbE RoCE Express2 feature capabilities. When this term is used in this information, the processing being described applies to both features. If processing is applicable to only one feature, the full terminology, for instance, IBM 10 GbE RoCE Express will be used.
• RoCE Express2, which is a generic term representing an IBM RoCE Express2® feature that might operate in either 10 GbE or 25 GbE link speed. When this term is used in this information, the processing being described applies to either link speed. If processing is applicable to only one link speed, the full terminology, for instance, IBM 25 GbE RoCE Express2 will be used.
• RDMA network interface card (RNIC), which is used to refer to the IBM® 10 GbE RoCE Express, IBM® 10 GbE RoCE Express2, or IBM 25 GbE RoCE Express2 feature.
• Shared RoCE environment, which means that the "RoCE Express" feature can be used concurrently, or 
shared, by multiple operating system instances. The feature is considered to operate in a shared RoCE 
environment even if you use it with a single operating system instance.

Clarification of notes
Information traditionally qualified as Notes is further qualified as follows:

Attention
  Indicate the possibility of damage

Guideline
  Customary way to perform a procedure

Note
  Supplemental detail

Rule
  Something you must do; limitations on your actions

Restriction
  Indicates certain conditions are not supported; limitations on a product or facility

Requirement
  Dependencies, prerequisites

Result
  Indicates the outcome

Tip
  Offers shortcuts or alternative ways of performing an action; a hint

Prerequisite and related information
z/OS Communications Server function is described in the z/OS Communications Server library. 
Descriptions of those documents are listed in “Bibliography” on page 1273, in the back of this document.

Required information
Before using this product, you should be familiar with TCP/IP, VTAM, MVS™, and UNIX System Services.

Softcopy information
Softcopy publications are available in the following collection.

</tr>
</tbody>
</table>

Other documents
This information explains how z/OS references information in other documents.
When possible, this information uses cross-document links that go directly to the topic in reference using shortened versions of the document title. For complete titles and order numbers of the documents for all products that are part of z/OS, see z/OS Information Roadmap (SA23-2299). The Roadmap describes what level of documents are supplied with each release of z/OS Communications Server, and also describes each z/OS publication.

To find the complete z/OS library, visit the z/OS library in IBM Knowledge Center (www.ibm.com/support/ knowledgecenter/SSLTBW/welcome).

Relevant RFCs are listed in an appendix of the IP documents. Architectural specifications for the SNA protocol are listed in an appendix of the SNA documents.

The following table lists documents that might be helpful to readers.

The z/OS Basic Skills Information Center

The z/OS Basic Skills Information Center is a web-based information resource intended to help users learn the basic concepts of z/OS, the operating system that runs most of the IBM mainframe computers in use today. The Information Center is designed to introduce a new generation of Information Technology professionals to basic concepts and help them prepare for a career as a z/OS professional, such as a z/OS systems programmer.

Specifically, the z/OS Basic Skills Information Center is intended to achieve the following objectives:

- Provide basic education and information about z/OS without charge
- Shorten the time it takes for people to become productive on the mainframe
- Make it easier for new people to learn z/OS

To access the z/OS Basic Skills Information Center, open your web browser to the following website, which is available to all users (no login required): https://www.ibm.com/support/knowledgecenter/zosbasics/com.ibm.zos.zbasics/homepage.html?cp=zosbasics
Summary of changes for IP Messages: Volume 1 (EZA)

This document contains terminology, maintenance, and editorial changes, including changes to improve consistency and retrievability. Technical changes or additions to the text and illustrations are indicated by a vertical line to the left of the change.

Changes made in z/OS Communications Server Version 2 Release 3

This document contains information previously presented in z/OS Communications Server: IP Messages Volume 1 (EZA), which supported z/OS Version 2 Release 2.

Changed information
• EZA5575 - EZA5590

Deleted information
• EZA5125 - EZA5574
• EZA5593 - EZA5708

Changes made in z/OS Version 2 Release 2, as updated September 2016

This document contains information previously presented in z/OS Communications Server: IP Messages Volume 1 (EZA), SC27-3654-01, which supported z/OS Version 2 Release 2.

z/OS Version 2 Release 1 summary of changes

See the Version 2 Release 1 (V2R1) versions of the following publications for all enhancements related to z/OS V2R1:

• z/OS Migration
• z/OS Planning for Installation
• z/OS Summary of Message and Interface Changes
• z/OS Introduction and Release Guide
Chapter 1. IP message standards introduction

This topic contains the following information about IP message standards:

- “Message text formats” on page 1
- “Message description formats” on page 3
- “Message routing codes” on page 3
- “Message descriptor codes” on page 4
- “Message groups” on page 5

Message text formats

Most IP messages are preceded by an identifier, as illustrated in Figure 1 on page 1.

![Figure 1. Sample IP message format](image)

Message identifiers

All message identifiers include the following sections:

- Prefix
- Message number
- Message type code

See Figure 2 on page 1 for a sample IP message identifier.

![Figure 2. Sample IP message identifier](image)

Prefix

Message identifiers include a prefix that identifies the source of the message. The following message prefixes are used by TCP/IP and its associated applications:

- EZA
Message number
Message identifiers include a unique 2- through 4-digit message number.

Message type code
The following type codes are used in IP messages:

A  Action
   The message indicates that an action is required.

E  Eventual Action
   You must eventually take some action to correct a problem. The system continues processing without
   waiting for a response.

I  Information
   The message is for your information. This type code can be used to notify you of an error. No response
   is necessary, but you might need to take some action.

S  Severe Error
   The message is for a system programmer.

W  Wait
   Processing stops until the operator takes a required action.

Syntax notation in message text
In this documentation, IP messages are described with the following syntax notation:

Non-highlighted characters
Represent the actual text of the message.

Italic characters
Represent message variables. The variables are replaced by their values in the actual message.

Braces { }
Represent a group of text strings, only one of which is displayed in the actual message. The text
strings are separated by or-signs (|) in the braces.
   The braces and or-signs are not displayed in the actual message.

Brackets [ ]
Represent optional messages or optional parts of a message. Optional messages or optional parts of a
message are displayed only under certain circumstances that are described in the "Explanation"
section of the message. If an optional part has more than one possible value, or-signs separate the
possibilities.
   The brackets and or-signs are not displayed in the actual message.
**Message description formats**

A message consists of several sections. Not all sections are used for each message. For messages that are issued as a group, the "Explanation" section of the first message usually contains a complete description of the other messages in the group.

- **Explanation**
  
  Explains why the message was issued and describes all text and variables in the message.

- **System action**
  
  Explains the system state after the message was issued. This section also indicates whether the system is waiting for a reply.

- **Operator response**
  
  Describes actions that the operator can or must take at the console.

- **System programmer response**
  
  Suggests actions, programming changes, or system definition changes that isolate or correct errors or improve the efficiency of the system.

- **User response**
  
  Describes actions that the user can or must take at the terminal.

- **Problem determination**
  
  Additional instructions for determining the cause of the problem, searching problem databases, and if necessary, reporting the problem to the IBM support center. These instructions are for system programmers who can troubleshoot problems.

- **Source**
  
  Element, product, or component that issued the message.

- **Module**
  
  Module or modules that issued the message.

- **Automation**
  
  Indicates whether the message is a candidate for automation.

- **Example**
  
  Example of the message with variable fields replaced with actual values, perhaps in context with other messages.

**Message routing codes**

Routing codes determine where a message is displayed. More than one routing code might be assigned to the message. With multiple-console support, each console operator receives the messages related only to the commands entered at that console or to the functions assigned to that console, regardless of the routing codes assigned to those messages. If a message that is routed to a particular console cannot be issued at that console, that message is issued at the master console.

The following routing codes are used in IP messages:

<table>
<thead>
<tr>
<th>Code</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td><strong>Master Console Action</strong>: This message indicates a change in the system status and demands action by the master console operator.</td>
</tr>
<tr>
<td>2</td>
<td><strong>Master Console Information</strong>: This message indicates a change in the system status. Such a message does not demand action, but alerts the master console operator to a condition that might require action. This routing code is used for any message that indicates job status, and also for processor and problem program messages to the master console operator.</td>
</tr>
</tbody>
</table>
3 **Tape Pool**: This message specifies the status of a tape unit or reel, the disposition of a tape reel, or other tape-oriented information. For example, this can be a message which requests that tapes be mounted.

4 **Direct Access Pool**: This message specifies the status of a direct access unit or pack, the disposition of a disk pack, or other direct-access-oriented information. For example, this can be a message which requests that disks be mounted.

5 **Tape Library**: This message specifies the tape library information. For example, this can be a message which requests, by volume serial numbers, that tapes be obtained for system or programmer use.

6 **Disk Library**: This message specifies the disk library information. For example, this can be a message which requests, by volume serial numbers, that disk packs be obtained for system or programmer use.

7 **Unit Record Pool**: This message specifies the unit-record equipment information. For example, this can be a message which requests that printer trains be mounted.

8 **Teleprocessing Control**: This message specifies the status or the disposition of data communication equipment. For example, this can be a message that indicates line errors.

9 **System Security**: This message is associated with security checking. For example, this can be a message that requires a reply that is specifying a password.

10 **System Error Maintenance**: This message indicates either a system error, or an input/output error that cannot be corrected. It also indicates a message that is associated with system maintenance.

11 **Programmer Information**: This message is for the problem programmer. This routing code is used only when the program that issued the message cannot route the message to the programmer by using the system-output data set facility. The message is displayed in the system output message class of the job.

12 **Emulators**: This message is issued by an emulator program.

13 Reserved for customer use.

14 Reserved for customer use.

15 Reserved for customer use.

16 Reserved for future expansion.

**Message descriptor codes**

Descriptor codes describe the kind of message being issued. These codes, with message routing codes, determine how a message is to be printed or displayed and how a message is to be deleted from a display device. Descriptor codes 1 – 7 are mutually exclusive; only one such code is assigned to a message. Descriptor codes 8 – 10 can be displayed with any other descriptor codes.

The following descriptor codes are used in IP messages:

<table>
<thead>
<tr>
<th>Code</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>4</td>
<td>z/OS Communications Server: IP Messages: Volume 1 (EZA)</td>
</tr>
</tbody>
</table>
1 **System Failure**: This message indicates that an error that cannot be corrected occurs. To continue, the operator must restart the system.

2 **Immediate Action Required**: This message requires an immediate action by the operator. The action is required because the message issuer is in a wait state until the action is taken, or because system performance is degraded until the action is taken.

3 **Eventual Action Required**: This message requires an eventual action by the operator. The task does not await completion of the action.

4 **System Status**: This message indicates the status of a system task or of a hardware unit.

5 **Immediate Command Response**: This message is issued as an immediate response to a system command. The completion of the response is not dependent on another system action or task.

6 **Job Status**: This message contains status information regarding the job or job step.

7 **Application Program/Processor**: This message is issued when a program is in problem mode.

8 **Out-of-Line Message**: This message is one of a group of messages to be displayed out of line. If the device support cannot print a message out of line, the code is ignored, and the message is printed in line with other messages.

9 **Request of the Operator**: This message is written in response to a request of the operator for information by the DEVSERV, MONITOR commands, and other operating system commands.

10 This message is issued in response to a **TRACK** command.

11 **Critical Eventual Action Required**: This message indicates that a critical event has occurred and must eventually be followed by an action. The message remains on the screen until the action is taken.

12 **Important Information**: This message contains important information that must be displayed at the console, but does not require any action in response.

13–16 Reserved.

### Message groups

A message group contains two or more messages that are displayed together in response to a specific command or error condition. The following example is a message group.

```
EZZ8453I jobtype STORAGE
EZZ8454I jobname STORAGE CURRENT MAXIMUM LIMIT
EZZ8458I location
EZZ8455I storagetype current maximum limit
EZZ8459I DISPLAY TCPIP STOR COMPLETED SUCCESSFULLY
```

In most cases, the "Explanation" section of the first message in the group contains an example of the group and information about all messages in the group. The message descriptions of members of the group refer back to the first message for complete information.
Chapter 2. EZA0xxxx messages

EZA0519E   Unable to read dataset dataset, rc=rc

Explanation
TCPIP could not read the data set. The data set name is indicated along with a return code reason. There might be an earlier message that explains the error.

rc should be one of the following return codes. If rc is not one of the following return codes, then an unexpected return code was encountered.

1     Data set is empty
8     System error trying to obtain format 1 DSCB
12    Data set is migrated
16    Volume is not mounted
20    Volume is not direct access
24    Data set is VSAM
28    Invalid data set organization (DSORG) or record format (RECFM)

System action
MAKESITE halts. TCPIP continues.

Operator response
Check that correct access to the indicated data set is available before continuing. If rc is an unexpected return code, contact the System Programmer.

System programmer response
If rc is an unexpected return code, contact the IBM Support Center with the message.

Module
CMMAKSI

Procedure name
StartUp

EZA0521W   Warning: line number truncated to number characters

Explanation
A line has been truncated because it is longer than the MaxLine constant. The MaxLine constant is the maximum number of characters that can be specified on a single entry line. Comments are ignored when determining the length of a line.
System action
TCPIP continues.

Operator response
If this truncation condition is unacceptable, correct the error before continuing. All entries to the HOSTS.LOCAL data set should be specified on a single line of up to a maximum of 512 characters per line. See z/OS Communications Server: IP Configuration Reference for more information.

System programmer response
No action is needed.

Module
CMMAKSI

Procedure name
GetLine

EZA0522E Line line: bad address syntax

Explanation
An incorrect IP address was found in the input data set. The program procedure found a value different from the required IP address in dotted decimal notation.

System action
TCPIP continues.

Operator response
Correct the error identified on the indicated line and continue.

System programmer response
No action is needed.

Module
CMMAKSI

Procedure name
GetAddress

EZA0523E Line number: only number fields

Explanation
The indicated number of field terminators was less than the required minimum of three for the indicated line number in the input data set.

System action
TCPIP continues.
Operator response
Correct the error identified on the indicated line and continue.

System programmer response
No action is needed.

Module
CMMAKSI

Procedure name
ParseLine

EZA0524E Line number: no type specified

Explanation
The indicated line number in the input data set had a null type field.

System action
TCPIP continues.

Operator response
Correct the error identified on the indicated line and continue.

System programmer response
No action is needed.

Module
CMMAKSI

Procedure name
ParseLine

EZA0525E Line number: unknown type type

Explanation
The indicated line number in the input data set was not null and did not contain HOST, GATEWAY, or NET in the type field.

System action
TCPIP continues.

Operator response
Correct the error identified on the indicated line and continue.

System programmer response
No action is needed.
Module
CMMAKSI

Procedure name
ParseLine

EZA0526E  Line number: no address specified

Explanation
The indicated line number in the input data set did not contain a valid address.

System action
TCPIP continues.

Operator response
Correct the error identified on the indicated line and continue.

System programmer response
No action is needed.

Module
CMMAKSI

Procedure name
ParseLine

EZA0527W  Warning: line number has too many addresses; only the first address will be stored.

Explanation
The data set contained more addresses than the number allowed by the indicated MAXsiteADDRESSES variable.

System action
TCPIP continues.

Operator response
Correct the error identified in the indicated line of the HOSTS.LOCAL data set and continue. See z/OS Communications Server: IP Configuration Reference for more information.

System programmer response
No action is needed.

CMMAKSI

**Procedure name**
ParseLine

**EZA0529W**  Warning: line *number* has too many names; only the first *name* will be stored.

**Explanation**
The indicated line number in the input data set contained more names than the number allowed by the indicated `hbound(names)` variable.

**System action**
TCPIP continues.

**Operator response**
Correct the error identified in the indicated line and continue.

**System programmer response**
No action is needed.

**Module**
CMMAKSI

**Procedure name**
ParseLine

**EZA0530E**  Line *number*: hash table overflow

**Explanation**
Data contained in the indicated line number of the input data set caused a hash table overflow because the `SiteTableSize` variable was exceeded. The size of the table entries is specified in the `userid.HOSTS.LOCAL` or the `HOSTS.LOCAL` data set. This message is followed by another message indicating that this is an irrecoverable error condition.
**System action**
TCPIP continues.

**Operator response**
Correct the error identified on the indicated line of the HOSTS.LOCAL data set and continue. The maximum length for a host entry allowed in the HOST tables is 24 characters. However, the name server does not have maximum character length. If the error persists, contact the IBM Software Support Center.

**System programmer response**
No action is needed.

**Module**
CMMAKSI

**Procedure name**
LookUp

| EZA0531I | H value, Tries number, Pos address, address, K value |
| EZA0532I | Index@address, address, K address |

**Explanation**
These messages provide additional information values after a table overflow has occurred. These messages are written to an output file and are displayed with EZA0530E.

**System action**
TCPIP continues.

**Operator response**
No action is needed.

**System programmer response**
See EZA0530E for more information.

EZA0535E Address hash table overflow on host

Explanation
The procedure MergeNames, which takes host names from the old HOST data set and adds them to the new HOST data set, was not successful because the AddrTableSize variable was exceeded for the host address hash table. This message is displayed with EZA0538W.

System action
TCPIP continues.

Operator response
Correct the error identified on the indicated line and continue. The maximum length for a host allowed in the HOST tables is 24 characters. If the error persists, contact the IBM Software Support Center.
**System programmer response**

No action is needed.

**Module**

CMMAKSI

**Procedure name**

Insert

**EZA0537W**  Warning name lost: name

**Explanation**

The indicated host name was lost during the generation of the user_id.HOSTS.SITEINFO and the user_id.HOSTS.ADDRINFO data sets because the length of the host name was longer that the field specified. The maximum length for a host allowed in the HOST tables is 24 characters. This message is issued only if the WarnMe flag has been set to true with the WARN option.

**System action**

TCPIP continues.

**Operator response**

Reenter the host name in the HOSTNAME parameter of the HOSTS.LOCAL data set and restart the process. See z/OS Communications Server: IP Configuration Reference for more information.

**System programmer response**

No action is needed.

EZA0576E MakeSite Parameter ERROR - error.

Explanation
The parameter you have selected was not recognized by the MAKESITE program. error is the unrecognized parameter.
System action
TCPIP continues.

Operator response
MAKESITE does not allow continuation lines; entries should be made on a single line of no more than 512 characters. Reissue the command using a valid parameter. For more information on MAKESITE parameters see z/OS Communications Server: IP Configuration Reference.

System programmer response
No action is needed.

Module
CMMASKI

Procedure name
ParmExtract

EZA0578E Output data set file allocation ERROR: dataset

Explanation
The allocation of the HOSTS.SITEINFO data set failed. The following causes are typical causes of this failure:
• An existing data set cannot be opened for modification because another user has it allocated.
• A new data set cannot be allocated because there is not sufficient space on the volume.
• The user does not have the authority to create the data set.

System action
MAKESITE halts.

Operator response
Notify the system programmer to correct the error.

System programmer response
Ensure that another user does not have the HOSTS.SITEINFO data set open for modification and that there is space available on the volume to create or expand the HOSTS.SITEINFO data set. Also ensure that the user has sufficient authority to access or create the HOSTS.SITEINFO data set.

Module
CMMASKI

Procedure name
StartUp

EZA0579E Proceed Flag is OFF --HALT--.

Explanation
This message will display if the data set specified in message EZA0578E is incorrect. This causes the procedure to discontinue until the error is corrected.
System action
MAKESITE halts.

Operator response
Make sure the syntax of the data set is correctly specified and MAKESITE is able to read the HOSTS.LOCAL data set.

System programmer response
No action is needed.

Module
CMMAISKI

Procedure name
getstate

EZA0580I Proceed Flag is ON -- Using default attributes.

EZA0627E Error: Name resolution via Nameserver was unsuccessful.

Explanation
The TCP host name could not be resolved using the name server for the indicated reason.

System action
The program continues.

Operator response
Determine why HOMETEST cannot communicate with the name server, and rerun HOMETEST.

System programmer response
No action is needed.

Module
HOMETEST

Procedure name
Test

EZA0628E Reason: errmsg (msgnum)

Explanation
This message indicates that the HOMETEST command was unsuccessful. 
errmsg is the text of the message that describes the error.
msgnum is the 4-digit numeric portion of the message identifier of the EZA message whose text is displayed in errmsg. For more information about this message, see message EZAmsgnum.

System action
TCPIP is unsuccessful.

Operator response
No action is needed.
System programmer response
Respond as indicated by the message EZAmsgnum.

Module
HOMETEST

Procedure name
Test

EZA0640E  Usage: CONVXLAT InputDsname OutputDsname ( KANJI|HANGEUL|TCHINESE -CODEFILE-

Explanation
Invalid syntax was specified for the CONVXLAT command.

System action
The program halts. No output data set is produced.

Operator response
Reenter the command using valid syntax. See z/OS Communications Server: IP Configuration Reference for more information about customizing DBCS⁄SBCS translation tables using CONVXLAT.

System programmer response
No action is needed.

Module
CMCONVXL PASCAL

Procedure name
GetParameters,DoIt

EZA0641E  Input dataset dataset not found

Explanation
The CONVXLAT command specified an input data set that does not exist.

System action
The program halts. No output data set is produced.

Operator response
Reenter the command specifying an existing data set for the InputDsname parameter. Make sure the data set contains valid translation tables. See z/OS Communications Server: IP Configuration Reference for more information about customizing DBCS-SBCS translation tables using CONVXLAT.

System programmer response
No action is needed. 

Module
CMCONVXL PASCAL
Premature EOF on input dataset dataset

Explanation
The CONVXLAT command specified an SBCS input data set that ended prematurely, before the output translation table was completed.

System action
The program halts. An invalid output data set is produced.

Operator response
Reenter the command specifying a valid data set for the InputDsname parameter. Make sure the data set contains valid SBCS translation tables. See z/OS Communications Server: IP Configuration Reference for more information about customizing DBCS/SBCS translation tables using CONVXLAT.

System programmer response
No action is needed.

Module
CMCONVXL PASCAL

Procedure name
DoOneTable

Error in input line: “input record”

Explanation
The CONVXLAT command specified an SBCS input data set that contained a data error in the specified line. The line did not contain valid hexadecimal codes.

System action
The program halts. An invalid output data set is produced.

Operator response
Reenter the command specifying a valid data set for the InputDsname parameter. Make sure the data set contains valid SBCS translation tables. See z/OS Communications Server: IP Configuration Reference for more information about customizing DBCS/SBCS translation tables using CONVXLAT.

System programmer response
No action is needed.

Module
CMCONVXL PASCAL

Procedure name
DoOneTable
EZA0644E Input contains wrong number of bytes: “input record”

Explanation
The CONVXLAT command specified an SBCS input data set that contained a data error in the specified line. The line did not contain 16 valid hexadecimal codes.

System action
The program halts. An invalid output data set is produced.

Operator response
Reenter the command specifying a valid data set for the InputDsname parameter. Make sure the data set contains valid SBCS translation tables. See z/OS Communications Server: IP Configuration Reference for more information about customizing DBCS/SBCS translation tables using CONVXLAT.

System programmer response
No action is needed.

Module
CMCONVXL PASCAL

Procedure name
DoOneTable

EZA0646E Output data set DSORG=PO. Execution is HALTed

Explanation
The output file submitted for the CONVXLAT command is a partitioned data set. The CONVXLAT command will not delete a partitioned data set.

System action
The command is not executed. TCPIP continues.

Operator response
Resubmit the CONVXLAT command with a valid output file. For more information about the CONVXLAT command, see z/OS Communications Server: IP User’s Guide and Commands.

System programmer response
Assist the user as necessary.

Module
CMCONVXL

Procedure name
DoIt

EZA0647E Output dataset is invalid. Execution is HALTed

Explanation
The output data set specified for the CONVXLAT command was incorrect.
System action
The command is not executed. TCPIP continues.

Operator response
Resubmit the CONVXLAT command with a valid output file. For more information about the CONVXLAT command, see z/OS Communications Server: IP User's Guide and Commands.

System programmer response
Assist the user as necessary.

Module
CMCONVXL

Procedure name
DoIt

EZA0649E  Output dataset not found. Cannot allocate PDS.

Explanation
The output data set for the CONVXLAT command did not exist when the CODEFILE option was used. The CONVXLAT program is unable to allocate the partitioned data set required for generation of the codefiles.

System action
The program halts. No output data set is produced.

Operator response
For more information about the error, contact the system programmer.

System programmer response
Make sure that the output data set for the codefiles is a correctly allocated partitioned data set. See z/OS Communications Server: IP Configuration Reference for more information about allocating a PDS for CONVXLAT codefile generation.

Module
CMCONVXL PASCAL

Procedure name
DoIt

EZA0650W  DBCS code is defined more than once - code_index. Continuing ...

Explanation
The error occurred during processing of DBCS translation data from the input data set. A DBCS code index was defined more than once.

System action
The program continues. The DBCS code defined more than once will have the value first assigned to it in the input data set.
Operator response
For more information, contact the system programmer.

System programmer response
Make sure that all DBCS codes in the data set are defined only once. See z/OS Communications Server: IP Configuration Reference for more information about customizing DBCS-SBCS translation tables for use by CONVXLAT.

Module
CMCONVXL PASCAL

Procedure name
DoDbcsBinFile, DoCodeFiles

EZA0651W  DBCS code index - code_index - out of order. Continuing ...  

Explanation
The error occurred during processing of DBCS translation data from the input data set. A DBCS code index was found that was numerically less than the previous code index. The output data set may contain unpredictable results and should not be used.

System action
The program continues.

Operator response
For more information, contact the system programmer.

System programmer response
Make sure that all DBCS codes in the data set are defined in numerical order from the lowest value to the highest. See z/OS Communications Server: IP Configuration Reference for more information about customizing DBCS-SBCS translation tables for use by CONVXLAT.

Module
CMCONVXL PASCAL

Procedure name
DoDbcsBinFile, DoCodeFiles

EZA0652I  Current code set is - code_file

Explanation
This message is displayed when the CODEFILE option of CONVXLAT is used. It indicates which codefile is currently being generated.

System action
The program continues.

Operator response
No action is needed.
System programmer response
No action is needed.

Module
CMCONVXL PASCAL

Procedure name
DoCodeFiles

**EZA0653W** SBCS code is defined more than once - code_index. Continuing ...

Explanation
The error occurred during processing of SBCS translation data from the input data set. An SBCS code index was defined more than once. This SBCS code index will have the value first assigned to it in the input data set.

System action
The program continues.

Operator response
For more information, contact the system programmer.

System programmer response
Make sure that all SBCS codes in the data set are defined only once. See z/OS Communications Server: IP Configuration Reference for more information about customizing DBCS/SBCS translation tables for use by CONVXLAT.

Module
CMCONVXL PASCAL

Procedure name
DoDbcsBinFile, DoCodeFiles

**EZA0654W** SBCS code index - code_index - out of order. Continuing ...

Explanation
The error occurred during processing of SBCS translation data from the input data set. An SBCS code index was found that was numerically less than the previous code index. The output data set will contain unpredictable results and should not be used.

System action
The program continues.

Operator response
For more information, contact the system programmer.

System programmer response
Make sure that all SBCS codes in the data set are defined in numerical order from the lowest value to the highest. See z/OS Communications Server: IP Configuration Reference for more information about customizing DBCS-SBCS translation tables for use by CONVXLAT.
Module
CMCONVXL PASCAL

Procedure name
DoDbcsBinFile, DoCodeFiles

EZA0655E  No SBCS input data in input dataset dataset

Explanation
The input data set contained only DBCS code point mappings and did not contain the associated SBCS data. The output data set will not be complete and should not be used.

System action
The program halts.

Operator response
For more information, contact the system programmer.

System programmer response
Make sure that the input data set contains appropriate SBCS code point mappings. See z/OS Communications Server: IP Configuration Reference for more information about customizing DBCS/SBCS translation tables for use by CONVXLAT.

Module
CMCONVXL PASCAL

Procedure name
DoDbcsBinFile, DoCodeFiles

EZA0656E  Empty input dataset dataset

Explanation
The input data set existed but contained no data. The output data set will be empty.

System action
The program halts.

Operator response
For more information, contact the system programmer.

System programmer response
Make sure that the input data set contains the appropriate translation table data. See z/OS Communications Server: IP Configuration Reference for more information about customizing DBCS/SBCS translation tables for use by CONVXLAT.
DoDbcsBinFile, DoCodeFiles

**EZA0657E** | Error in first line of translation data: *input_record*

**Explanation**
The first line of translation data in the input data set was in error. This error may be caused by an incorrect number of translation data columns or by incorrect (for example, too long, too short, not hex data and so on) data in the columns. The first line of data must contain correct and complete data for processing to continue. The output data set will be empty.

**System action**
The program halts.

**Operator response**
For more information, contact the system programmer.

**System programmer response**
Make sure that the input data set contains the appropriate translation data in the first line of uncommented data. See z/OS Communications Server: IP Configuration Reference for more information about customizing DBCS/SBCS translation tables for use by CONVXLAT.

**Module**
CMCONVXL PASCAL

DoDbcsBinFile, DoCodeFiles

**EZA0658E** | Error in DBCS input line: *input_record*

**Explanation**
An error was found processing a line of DBCS translation data from the input data set. Incorrect data was found in one of the columns of the input line. The output data set will contain invalid data and should not be used.

**System action**
The program halts.

**Operator response**
For more information, contact the system programmer.

**System programmer response**
Make sure that the input data set contains valid translation data in all DBCS data lines. See z/OS Communications Server: IP Configuration Reference for more information about customizing DBCS/SBCS translation tables for use by CONVXLAT.

**Module**
CMCONVXL PASCAL
**EZA0659E  Error in SBCS input line: input_record**

**Explanation**
An error was found processing a line of SBCS translation data from the input data set. Incorrect data was found in one of the columns of the input line. The output data set will contain invalid data and should not be used.

**System action**
The program halts.

**Operator response**
For more information, contact the system programmer.

**System programmer response**
Make sure that the input data set contains valid translation data in all SBCS data lines. See z/OS Communications Server: IP Configuration Reference for more information about customizing DBCS/SBCS translation tables for use by CONVXLAT.

---

**EZA0660E  Output file is not a PS dataset**

**Explanation**
The output file specified for the CONVXLAT command was not a sequential data set. The files are not translated.

**System action**
TCP/IP continues.

**Operator response**
Resubmit the CONVXLAT command specifying a sequential data set for the output file.

**System programmer response**
Assist the user as necessary.

---

**EZA0661E  Error in SBCS input data. Incorrect number of code point mappings.**
**Explanation**
The input data set for the CONVXLAT command did not contain 256 single byte code point mappings. An output data set is produced but is not valid.

**System action**
The program halts.

**Operator response**
For more information about the error, contact the system programmer.

**System programmer response**
The SBCS translation data must contain exactly 256 code point mappings when using CONVXLAT options KANJI, HANGEUL or TCHINESE. Make sure that the input data set has the correct number of single byte code point mappings. See z/OS Communications Server: IP Configuration Reference for more information about customizing DBCS/SBCS translation tables for use by CONVXLAT.

**Module**
CMCONVXL PASCAL
Chapter 3. EZA1xxxx messages

Messages deleted in V2R2:
  • EZA1535I

**EZA1450I**  IBM FTP version

**Explanation**
This message indicates which version of File Transfer Protocol (FTP) is running on the system.

**System action**
FTP continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
EZAFTPCY

**EZA1451E**  Cannot load translate table specified by TRANSLATE parameter name

**Explanation**
The FTP client was started with the TRANSLATE name or -t name parameter on the FTP command. FTP used the name specified to search for a data set containing binary translate tables, but was unable to find a usable data set.

**System action**
FTP Client exits.

**Operator response**
Notify the system programmer of the error.

**System programmer response**
Reissue the FTP command with the TRACE or -d parameter to enable tracing which will display the results of each attempt in the search order. Respond to the error indicated.

**Module**
EZAFTPNX

**EZA1456I**  Connect to ?

**Explanation**
This is a prompt for the user to enter the name or IP address of the host system he wants to connect to. Port number is optional.
System action
Processing continues.

Operator response
Enter host name or IP address.

System programmer response
No action is needed.

Module
EZAFTPCY

EZA1457I  You must first issue the 'OPEN' command

Explanation
The OPEN subcommand must be issued to establish a connection to the other host's FTP server.

System action
FTP continues.

Operator response
Issue the OPEN subcommand with a host name. See the z/OS Communications Server: IP User's Guide and Commands for information about the open subcommand.

System programmer response
No action is needed.

Module
EZAFTPCL, EZAFTPPC

EZA1458I  You must first issue the 'USER' command

Explanation
The USER subcommand must be issued to identify you to the other host after opening a connection. Your password on the other host can also be specified on the USER subcommand.

System action
FTP continues.

Operator response
Issue the USER subcommand with your logon name on the other host. See the z/OS Communications Server: IP User's Guide and Commands for information about the user subcommand.

System programmer response
No action is needed.

EZA1459I  NAME host user
**Explanation**
This is a prompt for the user ID on the target host system.

**System action**
None.

**Operator response**
Type the user ID for the target system or press enter to use the same user ID that you are using on the client system.

**System programmer response**
No action is needed.

**Module**
EZAFTPCZ

**EZA1460I Command:**

**Explanation**
The system is prompting you to enter a command.

**System action**
The system waits for you to enter a command.

**Operator response**
Enter the command you want to process.

**System programmer response**
No action is needed.

**Module**
EZAFTPCU

**EZA1464I Missing parm after TRANSLATE**

**Explanation**
A nonstandard translation table name (data set name) must be specified on the FTP command TRANslate parameter. FTP uses the translation table in the user_id.data set_name.TCPXLBIN rather than the standard translation table provided with TCPIP for MVS.

**System action**
FTP continues.

**Operator response**
Specify the data set name of the translate table you want to take precedence.

**System programmer response**
No action is needed.
FTP: tcp parameter requires an address space name.

Explanation
When the TCP parameter is specified on the FTP command, an address space name must be specified.

System action
FTP terminates.

Operator response
Specify an address space name on the TCP parameter of the FTP command.

System programmer response
No action is needed.

FTP: using name

Explanation
FTP is using the tcpip stack named name. If neither the -p nor the (TCP start parameter was used to specify a tcpip stack name, this stack name came from TCPIPJOBNAME in TCPIP.DATA.

System action
FTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Open of INPUT data set failed

Explanation
The FTP Client attempted to open the data set allocated to the INPUT or SYSIN DD statement and encountered an error.

System action
The FTP Client terminates.

Operator response
Correct the error with the data set.
System programmer response
No action is needed.

Module
EZAFTPCY

EZA1472I  Ambiguous (command)

Explanation
FTP encountered a command during processing that is ambiguous. The command is displayed in the message.

System action
FTP continues.

Operator response
Enter a valid command.

System programmer response
No action is needed.

Module
EZAFTPPC

EZA1473W  LRECL lrecl is incompatible with RECFM recfm

Explanation
The LRECL value is incompatible with the RECFM. This value might have come from FTP.DATA, as the result of a LOCSITE command, or from MVS as a default.

lrecl is the length of the record.

recfm is the Record format.

System action
The file transfer ends.

Operator response
Enter a correct value using LOCSITE LRECL=value. See the z/OS Communications Server: IP User's Guide and Commands for information about transferring data using the File Transfer Protocol.

System programmer response
Update the FTP.DATA file. See the z/OS Communications Server: IP Configuration Reference and to the z/OS Communications Server: IP User's Guide and Commands for information about the parameters of the FTP.DATA file.

Module
EZAFTPCG

Procedure name
RECVDATA()
EZA1475I Connection with foreignhost terminated

Explanation
The connection to the foreign host is closed.

System action
FTP Client halts.

Operator response
Reestablish a connection with the foreign host's FTP server by using the OPEN subcommand.

System programmer response
No action is needed.

Module
EZAFTPSC

EZA1478I GetReply returns replycode

Explanation
This message indicates the reply code from the specified host (control connection).

System action
FTP continues.

Operator response
If an error occurred in the connection process, the reply code indicates the error. Correct the error according to the reply code. Otherwise, no action is necessary.

System programmer response
No action is needed.

EZA1479I File transfer might be incomplete - Last record received without EOL sequence

Explanation
The user requested a file from the server. The FTP client was receiving the file while ENCODING was set to MBCS. The server sent the file without appending <CRLF>, the FTP end of line (EOL) sequence, to the last record. The FTP client configured MBREQUIRELASTEOL TRUE, so the client considers this to be an error. The file transfer might not be complete.

System action
The FTP client sends an ABOR command to the server. The FTP client continues.

Operator response
No action needed.

System programmer response
If the sender of the file was not a z/OS CS FTP server, consult the vendor of that product for more information. If the vendor indicates that the last record does not include an EOL marker, use the LOCSIte subcommand with
the NOMBREQUIRELASTEOL parameter set to change the MREQUIRELASTEOL setting, then get the file again. If the problem continues, contact the vendor.

If the sender of the file was a z/OS CS FTP server, the transfer is incomplete. z/OS FTP appends an EOL marker to the final file record of multibyte files unless you have overridden the sender's EOL marker using the server's MBSENDEOL configuration option. Use the stat subcommand to query the server's MBSENDEOL setting. If MBSENDEOL is not CRLF, use the site subcommand with the MBSENDEOL=CRLF parameter set to change the server's MBSENDEOL setting, then get the file again. If MBSENDEOL is CRLF, save the output from the stat subcommand and the LOCStat subcommand, and contact the IBM support center.

See the information about the MBREQUIRELASTEOL and MBSENDEOL configuration options in z/OS Communications Server: IP Configuration Reference. See the information about using the stat, site, LOCStat, or LOCSts subcommands in z/OS Communications Server: IP User's Guide and Commands.

For z/OS FTP products, see the information about support for MBCS languages in z/OS Communications Server: IP User's Guide and Commands for information about configuring z/OS FTP for multibyte transfers. For other FTP implementations, consult your vendor for more information.

**User response**

Inspect the file to determine if the transfer was complete. If the transfer is not complete, contact the system programmer.

**Problem determination**

Not applicable.

EZA17011 >>> PORT 9,42,165,36,4,42
200 Port request OK.
EZA17011 >>> RETR /tmp/trash/test8.txt
125 Sending data set /tmp/trash/test8.txt
EZA14901 Error writing to data set
EZA14791 File transfer might be incomplete - Last record received without EOL
sequence
>>>ABOR
426 Connection closed; transfer aborted.
226 Abort successful.
EZA2108I Confidence=Low for GET of USER1.TEST8.TXT
EZA1460I Command:   
```

**EZA1480I**  Invalid argument string
**Explanation**
The program detected a single quotation mark inside the argument string. This is not valid.

**System action**
FTP continues.

**Operator response**
Correct the argument string by removing the single quotation mark from within the string.

**System programmer response**
No action is needed.

---

**EZA1481I Cannot find closing quote in command string**

**Explanation**
The program cannot find the quotation mark at the end of the command string.

**System action**
FTP continues

**Operator response**
Correct the command string by adding a single quotation mark at the end of the command string.

**System programmer response**
No action is needed.

---

**Module**
EZAFTPCP, EZAFTPCG

**EZA1485I number bytes transferred - interval second interval rate num_transferred_interval KB/sec - Overall transfer rate num_transferred_overall KB/sec**

**Explanation**
This message indicates the total number of bytes of binary data transferred to or from the FTP client along with the current rate of transfer.

*number* is the total number of bytes transferred since the transfer started.

*interval* is the length of the measured transfer interval in seconds. This rate is set using LOCSITE PROGRESS or the PROGRESS statement in the FTP.DATA file.

*num_transferred_interval* is the number of KBs (KB equals 1000 bytes) transferred per second in this interval.

*num_transferred_overall* is the number of KBs (KB equals 1000 bytes) transferred per second since the transfer started.

**System action**
FTP continues.

**Operator response**
No action is needed.
System programmer response
No action is needed.

Module
EZAFTPMR

**EZA1489I** Cannot allocate buffer space

Explanation
The FTP client attempted to allocate a work buffer and failed. Buffer requirements are moderate so this is unlikely.

System action
The program ends abnormally.

Operator response
Increase REGION below the line to 2M.

System programmer response
No action is needed.

Module
EZAFTPCY

**EZA1490I** Error writing to data set

Explanation
Data could not be written to the data set. FTP frees the buffer space.

System action
FTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
EZAFTPCG

**EZA1491I** Cannot find end of record character in data stream.

Explanation
FTP cannot find an end of record character in the data it is transmitting. FTP issues this message and message EZA1492I and frees the data buffer.

System action
FTP continues.
Operator response
See the response for message EZA1492I.

System programmer response
See the response for message EZA1492I.

EZA1492I Maximum record length supported in EBCDIC/ASCII mode is 64K

Explanation
FTP could not find an end of record character in the data it is transmitting. The maximum length for an EBCDIC or ASCII mode transmission is 64 KB. FTP does not write the whole buffer and moves any remaining data to the beginning of the buffer. FTP starts getting data at the beginning of the free space in the buffer.

System action
FTP continues.

Operator response
Make sure the appropriate end of record character is in the data to be transmitted.

System programmer response
No action is needed.

EZA1532I User exit exitname module modname modified the FTP command arguments

Explanation
The FTP client displays this message when an FTP client user exit returns a return code of 4. A return code of 4 indicates that the user exit has modified one or more arguments of the command that the client is about to send to the server.

In the message text:
exitname
The name of the FTP client user exit that is associated with modname
modname
The name of the FTP client user exit routine that modified the FTP command arguments

System action
The FTP command arguments are modified. More than one exit routine might be associated with this user exit. The FTP client passes the modified arguments to the next user exit routine.

Operator response
Not applicable.

System programmer response
Use the FTP client output to determine whether the modified arguments are acceptable.
- If the modified command is acceptable, no further action is needed.
- Otherwise, correct the user exit routine modname.

For more information about the FTP client user exits, see FTP client user exits statement in z/OS Communications Server: IP Configuration Reference.
User response

If you expected the user exit to modify the command arguments, no action is needed. Otherwise, save the FTP client output message for problem determination and contact the system programmer.

Problem determination

The user must enable trace PAR for detailed information about the modified parameters that are passed to the user exit.

```

EZA1533I User exit exitname module modname prevented user userid from sending command command – exit reason code x'hexadecimal-rsncode' (decimal-rsncode)
**Explanation**

The FTP client displays this message when an FTP client user exit returns a return code of 8 to reject an FTP command.

In the message text:

- **exitname**
  - The name of the FTP client user exit that is associated with *modname*

- **modname**
  - The name of the FTP client user exit routine that rejects the FTP command

- **userid**
  - The FTP client user ID

- **command**
  - The FTP command which would have been sent to the FTP server if *modname* had not rejected it

- **hexadecimal-rsncode**
  - The hexadecimal value of the reason code from the FTP client user exit routine

- **decimal-rsncode**
  - The decimal value of the reason code from the FTP client user exit routine

**System action**

The command *command* is not sent to the server. If more than one exit routine is associated with *exitname*, the FTP client stops calling exit routines for *command*.

**Operator response**

Not applicable.

**System programmer response**

- Inspect the optional message “EZA1556I” on page 74 and message EZA1533I that the FTP client displays to determine why *modname* rejected the FTP command. If it is appropriate for the exit routine to reject the FTP command, no further action is needed.
- Otherwise, correct the user exit routine.

For more information about the FTP client user exits, see FTP client user exits statement in z/OS Communications Server: IP Configuration Reference.

**User response**

If you expected the user exit to reject the command, no action is needed. Otherwise, save the message for problem determination and contact the system programmer.

**Problem determination**

See the system programmer response.

**EZA1534I  *** Control connection with ForeignHost dies.**

Explanation
The connection to the other host no longer exists.

System action
The local host waits for the other host to close the connection and then closes the local host end of the
connection.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
EZAFTPSC

**EZA1535I  Active exit routines found for user exit exitname**

Explanation
The FTP client displays this message when it determines that some active user exit routines are associated with
an FTP client user exit.
In the message text:

**exitname**

The name of the FTP client user exit

The `exitname` variable can be set to the following values:

- **EZAFCCMD**
  The FTP command user exit
- **EZAFCREP**
  The FTP reply user exit

**System action**

The user exit will be called for each command that is sent to the server, or for each reply that is received from the server.

**Operator response**

**EZA1545I  Return code rc from user exit exitname module modname is ignored**

**Explanation**
The FTP client displays this message when it ignores a return code from an FTP client user exit routine.

In the message text:

- \( rc \)  
The return code from the FTP client user exit routine

- **exitname**  
The name of the FTP client user exit

- **modname**  
The name of the FTP client user exit routine

For more information about why a user exit ignores return codes from an FTP client user exit routine, see FTP client user exits statement in z/OS Communications Server: IP Configuration Reference.

For more information about user exit routines, see using dynamic exits services in z/OS MVS Programming: Authorized Assembler Services Guide.

EZA1545I Return code 12 from user exit EZAFCCMD module EZAFCCME is ignored
EZA1701I >>> QUIT
221 Quit command received. Goodbye.
EZA1546I User exit exitname module modname ended the FTP client – exit reason code x'hexadecimal-rsncode' (decimal-rsncode)
```

EZA1546I User exit exitname module modname ended the FTP client – exit reason code x'hexadecimal-rsncode' (decimal-rsncode)

Explanation

The FTP client displays this message when an FTP client user exit returns a return code of 12 and ends the FTP client.

In the message text:

- **exitname**
  The name of the FTP client user exit that is associated with **modname**

- **modname**
  The name of the FTP client user exit routine that ends the FTP client

- **hexadecimal-rsncode**
  The hexadecimal reason code from the FTP client user exit routine

- **decimal-rsncode**
  The decimal reason code from the FTP client user exit routine

System action

The FTP client ends. One or more exit routines might be associated with this user exit.

Operator response

Not applicable.

System programmer response

Inspect the messages the FTP client displays to determine why **modname** ended the FTP client.

- If the explanation provided by message EZA1546I and message “EZA1556I” on page 74 is satisfactory, and it is appropriate for the exit routine to end the FTP client, no further action is needed.
- Otherwise, correct the user exit routine.
For more information about the FTP client user exits, see FTP client user exits statement in z/OS Communications Server: IP Configuration Reference.

**User response**

Save the message for problem determination and contact the system programmer.

**Problem determination**

See the system programmer response.

(-1)
EZA1701I >>> QUIT
221 Quit command received. Goodbye.
```

**Explanation**

The FTP client displays this message when an FTP client user exit ends abnormally.

**User exit exitname module modname abended with abend code x'rc' and abend reason code x'rsncode'**

The FTP client displays this message when an FTP client user exit ends abnormally.
In the message text:

**exitname**
The name of the FTP client user exit

**modname**
The name of the FTP client user exit routine

**rc**
The hexadecimal abend code from the FTP client user exit routine

**rsancode**
The hexadecimal abend reason code from the FTP client user exit routine

For more information about abend codes and abend reason codes, see the z/OS MVS System Codes.

**System action**
Dynamic exits services disables this user exit routine. This user exit routine will not be called again until the system programmer takes corrective action.

**Operator response**
Not applicable.

**System programmer response**
See the z/OS MVS System Codes for an explanation and a programmer response.

**User response**
Save the message and the system log for problem determination, and contact the system programmer.

**Problem determination**
Examine the MVS console or the system log for information about the abend.

---

EZA1549I User exit exitname module modname returned an invalid return code rc

Explanation
The FTP client displays this message when an FTP client user exit routine returns a value in register 15 that is not supported for user exit exitname.

In the message text:

- **exitname**: The name of the FTP client user exit
- **modname**: The name of the FTP client user exit routine
- **rc**: The return code from the FTP client user exit routine

System action
The FTP client ends. One or more exit routines might be associated with this user exit. The FTP client stops calling user exit routines when a user exit routine returns an invalid return code.

Operator response
Not applicable.

System programmer response
Inspect the messages the FTP client displays and modify the user exit routine. For more information about user exit routines, see Diagnosing FTP client user exit problems in z/OS Communications Server: IP Diagnosis Guide.

User response
Save the messages for problem determination and contact the system programmer.

Problem determination
See the system programmer response.

```

**EZA1550E** You are already connected to host

**Explanation**
You are already connected to the host name you specified, host.

**System action**
Open command processing terminates.

**Operator response**
Quit or close the current FTP session before attempting to begin a new session.

**System programmer response**
No action is needed.

**Module**
EZAFTPCZ

**EZA1551I** Unknown host: host
**Explanation**
The host name you have requested a connection to is not a valid host name or is not known to TCPIP.

**System action**
TCPIP allows you to specify another host name and will attempt to establish a connection using that host name.

**Operator response**
There are several possible causes. The name may have been entered incorrectly. The name server may not be responding. The resolver may not be querying the correct name server.

**System programmer response**
Ensure that the host name is accessible via a name server, or defined in HOSTS.SITEINFO and HOSTS.ADDRINFO. See the z/OS Communications Server: IP Configuration Guide for information on domain name systems or HOSTS.SITEINFO and HOSTS.ADDRINFO data sets.

**Module**
EZAFTPSC

---

**EZA1552I Nonnumeric port designation: portname**

**Explanation**
The port was specified with the nonnumeric value indicated in this message.

**System action**
TCPIP allows you to specify another port name and will attempt to establish a connection using that port name.

**Operator response**
Specify a numeric port name. Valid numeric port names are 16 bits long. The well-known port number for FTP is 21; this is the default.

**System programmer response**
No action is needed.

---

**EZA1553E Invalid port number. Open fails.**

**Explanation**
The Open command cannot continue because a specified port number is less than 0 or too large. Port numbers can be a maximum of 16 bits long. The specified number, indicated in this message, exceeds this maximum.

**System action**
Open command processing terminates.

**Operator response**
Specify a port name with a maximum length of 16 bits.

**System programmer response**
No action is needed.
Module

System programmer response
No action is needed.

Module
EZAFTPSC

EZA1555I CSVDYNEX request failed for user exit exitname, RETURN CODE: x'rc' REASON CODE: x'rsncode'

Explanation
FTP called the dynamic exits services CSVDYNEX macro on behalf of an FTP client user exit routine, but the CSVDYNEX macro failed.

In the message text:
request
The text string of the CSVDYNEX macro request
exitname
The name of the FTP client user exit
rc
The hexadecimal return code from the CSVDYNEX macro
rsncode
The hexadecimal reason code from the CSVDYNEX macro

For return and reason codes for the CSVDYNEX macro, see CSVDYNEX — Provide dynamic exits services in z/OS MVS Programming: Authorized Assembler Services Reference ALE-DYN.

System action
Processing continues.

Operator response
Not applicable.

System programmer response
Examine the rc and rsncode values from the CSVDYNEX macro in CSVDYNEX — Provide dynamic exits services in z/OS MVS Programming: Authorized Assembler Services Reference ALE-DYN.
If rc and rsncode indicate that dynamic exits services disabled the exit routine, a user exit might have abnormally ended. Inspect the system log to determine why the user exit ended abnormally.

Otherwise, save the client messages and the system log, and contact the IBM service center.

**User response**

Save the message for problem determination and contact the system programmer.

**Problem determination**

See the system programmer response.

EZA1701I >>> QUIT
221 Quit command received. Goodbye.
EZA1555I CSV DVNX CALL failed for user exit EZA FCREP, RETURN CODE: x'04' REASON CODE: x'00000406'
```
Explanation
The FTP client displays this message when any of the following events occurs:
  • The FTP client user exit EZAFCCMD returns a return code of 8 and rejects a command.
  • The FTP client user exit EZAFCCMD returns a return code of 12 and ends the FTP client.
  • The FTP client user exit EZAFCREP returns a return code of 12 and ends the FTP client.
In the message text:
  
  **exitname**
  The name of the FTP client user exit
  
  **buffer contents**
  The 71 bytes of message text provided by the FTP client user exit

System action
When the FTP client user exit EZAFCCMD returns a return code of 8 and rejects a command, the FTP client continues processing.

When the FTP client user exit EZAFCCMD or EZAFCREP returns a return code of 12, the FTP client ends. One or more exit routines might be associated with this user exit. The FTP client stops calling the FTP user exit routines when one exit routine in the calling sequence returns a return code of 12.

Operator response
Not applicable.

System programmer response
This message is followed by message “EZA1546I” on page 67 when a user exit ends the FTP client or by message “EZA1533I” on page 61 when EZAFCCMD rejects a command. See message EZA1546I or EZA1533I for more information.

• If the explanation provided by message EZA1546I or EZA1533I and EZA1556I is satisfactory, and it is appropriate for the exit routine to reject the command or end the FTP client, no further action is needed.
• Otherwise, correct the user exit routine.

  See FTP client user exits statement in z/OS Communications Server: IP Configuration Reference for more information.

User response
Save the message for problem determination and contact the system programmer.

Problem determination
See the system programmer response.

**EZA1599I File delimiter is value**

**Explanation**
The indicated value is the file delimiter in use by the FTP client. If the current working directory is a z/OS UNIX file system directory, the delimiter is a forward slash (/); otherwise, the delimiter is a period (.).

**System action**
FTP continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

---

**Module**
EZAFTPCL

**EZA1600I Trace: trace, Send Port: port**

**Explanation**
This message is issued in response to the LOCSTAT subcommand. The trace value indicates whether the TRACE setting is true or false. True indicates that tracing is set on. The port value indicates whether the SENDPORT setting is true or false. True indicates that automatic sending of the PORT command will take place.

**System action**
FTP continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.
Module
EZAFTPCK

**EZA1601I** Send Site with Put command: value

Explanation
This message is issued in response to the LOCSTAT subcommand. The value specified indicates whether the SENDSITE value is set to true or false. True indicates that FTP will send a SITE command that contains record format information for the file or data set when you issue the PUT or MPUT subcommand.

**System action**
FTP continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

Module
EZAFTPCK

**EZA1602I** Connected to: host, Port: port, logged in

Explanation
This message is issued in response to the LOCSTAT subcommand. The host is the remote host to which you are connected. The port is the port number of the remote host.

**System action**
FTP continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

Module
EZAFTPCK

**EZA1603I** Connected to: host, Port: port, not logged in

Explanation
This message is issued in response to the LOCSTAT subcommand. The host is the remote host to which you are connected. The port is the port number of the remote host.

**System action**
FTP continues.
Operator response
No action is needed.

System programmer response
No action is needed.

Module
EZAFTPCK

EZA1605I  Local Port: port

Explanation
This message is issued in response to the LOCSTAT subcommand. The indicated port is the port number of the local host.

System action
FTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
EZAFTPCK

EZA1606I  Data type: format, Transfer mode: mode, Structure: structure

Explanation
This message is issued in response to the LOCSTAT subcommand. It indicates the FTP data type (ASCII, EBCDIC, image or DBCS), the transfer mode (stream, block, or compressed), and the structure (file or record).

System action
FTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
EZAFTPCK

EZA1609I  Usage of PORT command is OFF
Explanation
The PORT command has been toggled off. The SENDPORT subcommand is used to toggle the PORT command off and on. FTP does not send PORT commands for data transfer when you disable PORT commands by toggling off the function.

System action
FTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
EZAFTPCL

EZA1610I Usage of PORT command is ON

Explanation
The PORT command has been toggled on. The SENDPORT subcommand is used to toggle the PORT command off and on. By default, the SENDPORT subcommand is turned on when you start the system. Each time you use the SENDPORT subcommand, the PORT command is turned alternately on and off. FTP uses a PORT command, by default, when establishing a connection for each data transfer. FTP does not send PORT commands for data transfer when you disable PORT commands by toggling off the function.

System action
FTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
EZAFTPCL

EZA1611I Usage of SITE command with PUT is OFF

Explanation
The SENDSITE command setting is false, or toggled off. When SENDSITE is off, the automatic sending of SITE commands is off. This means that when you issue the PUT command, FTP will not automatically send a SITE command containing record format information for the file or data set.

System action
FTP continues.
Operator response
No action is needed.

System programmer response
No action is needed.

Module
EZAFTPCL

EZA1612I Usage of SITE command with PUT is ON

Explanation
The SENDSITE command setting is true, or toggled on. When SENDSITE is on, the automatic sending of SITE commands is on. This means that when you issue the PUT command, FTP automatically sends a SITE command containing record format information for the file or data set.

System action
FTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
EZAFTPCL

EZA1613I Internal debug tracing disabled

Explanation
Debug tracing has been turned off. When the DEBUG subcommand is issued, debug tracing is toggled on or off.

System action
FTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

EZA1614I Internal debug tracing enabled

Explanation
Debug tracing has been turned on. When the DEBUG subcommand is on, FTP displays each command that is sent to the remote host and the response that is received from the remote host.
System action
FTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

EZA1615I  Debug tracing not available

Explanation
The FTP debug tracing facility is not available. The DEBUG option is off. DEBUG is off by default, unless the TRACE parameter was specified on the FTP command.

System action
FTP continues.

Operator response
Issue the DEBUG subcommand to toggle on the debug option.

System programmer response
No action is needed.

EZA1616I  Aborting connection

Explanation
The data transfer is being ended. The data connection is closing. An FTP reply code 226 is returned indicating that the data connection is closing, and the requested file action was successful. If an FTP reply code 426 is also returned, it indicates that the connection is closed, and that the transfer ended abnormally and was not successful.

System action
FTP continues.

Operator response
If the data transfer was not successful, reestablish the control connection and attempt the data transfer again.

System programmer response
No action is needed.

EZA1617I  number bytes transferred in number seconds. Transfer rate value Kbytes/sec.

Explanation
This message indicates the number of bytes transferred and the rate of transfer for a data transfer to or from the other host.

System action
FTP continues.
Operator response
No action is needed.

System programmer response
No action is needed.

Module
EZAFTPCG, EZAFTPCP

EZA1618I Unknown command 'command'

Explanation
The command you entered is not known to FTP. This message is concatenated to message EZA1619I.

System action
FTP continues.

Operator response
Enter a valid FTP command or subcommand. See message EZA1619I for more information. See z/OS Communications Server: IP User’s Guide and Commands for the syntax and descriptions of FTP commands and subcommands.

System programmer response
No action is needed.

Module
EZAFTPPC

EZA1619I For a list of the available commands, say HELP

Explanation
This message instructs you to use the FTP HELP facility to get information about valid FTP commands.

System action
FTP continues.

Operator response
Use the FTP HELP facility by entering HELP, to find information about the command or subcommand you want to use. Enter a valid FTP command or subcommand. See z/OS Communications Server: IP User’s Guide and Commands for the syntax and descriptions of FTP commands and subcommands.

System programmer response
No action is needed.

Module
EZAFTPPC

EZA1624W Local file file not found
Explanation
The FTP client was unable to locate the indicated local data set. This indicates that either the data set name was incorrect or the data set no longer exists.

System action
FTP continues.

Operator response
Check the syntax and resubmit the last command. If the data set was specified correctly, use the LS command to list the local data sets to make sure the data set exists. For more information about the LS command, see the z/OS Communications Server: IP User's Guide and Commands.

System programmer response
No action is needed.

Module
EZAFTPCG

EZA1625I Store unique is OFF

Explanation
The SUNIQUE subcommand is off. When SUNIQUE is off, FTP uses a store command (STOR) with the PUT and MPUT subcommands to store files on the remote host. When STOR is used, the remote host will overwrite an existing data set or file, if you try to store a data set or file with the same name.

System action
FTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
EZAFTPCL

EZA1626I Store unique is ON

Explanation
The SUNIQUE subcommand is on. When SUNIQUE is on, FTP uses a store unique command (STOU) with the PUT and MPUT subcommands and prevents you from overwriting or erasing the existing data set or file on the remote host if you attempt to store a data set or file with the same name. The created foreign data set or file is stored with a unique name. FTP sends the name of the created remote data set or file to the local host, where the data set or file name is displayed on your terminal.

System action
FTP continues.
Operator response
Make a note of the unique name that FTP returns to your terminal for the created data set or file.

System programmer response
No action is needed.

Module
EZAFTPCL

**EZA1636I  *** I can't open a data-transfer connection:**

Explanation
FTP cannot establish a data connection. The system displays the specific condition that prevented the connection from being established. FTP closes the socket that was acquired for this connection.

System action
FTP will exit, if the exit parameter has been specified.

Operator response
Reissue the FTP command to reestablish the data connection.

System programmer response
No action is needed.

Module
EZAFTPCG, EZAFTPCP

**EZA1638I  Store unique will send name**

Explanation
A name parameter will be included when the store unique command (STOU) is sent to the server.

System action
FTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
EZAFTPCL

**EZA1639I  Store unique will not send name**

Explanation
A name parameter will not be included when the store unique command (STOU) is sent to the server.
System action
FTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
EZAFTPCL

EZA1643I Data set dsname was not replaced.

Explanation
The specified data set was not replaced during data transfer. A local file already exists. If you want to replace the local file, specify GET with the (REPLACE option.

System action
FTP continues.

Operator response
If you want to replace the local file with the file that is being transferred, specify the GET command with the (REPLACE option.

System programmer response
No action is needed.

Module
EZAFTPCG

EZA1645I LRECL lrecl is invalid for RECFM recfm

Explanation
After processing the LOCSITE LRECL=lrecl command, the client cross checked the new values of the RECFM and LRECL variables and found them to be set to a combination that is invalid for the MVS operating system.

System action
The LRECL value is changed to the nearest value that is compatible with the record format. This message should be followed by EZA2791I, indicating the new value of the LRECL.

Operator response
If the new value for the LRECL is acceptable, no action is necessary, otherwise change the RECFM and LRECL to valid values.

System programmer response
Use LOCSITE to set the correct values for RECFM or LRECL. See z/OS DFSMS Using Data Sets for information about selecting valid values for BLOCKSIZE, LRECL, and RECFM.
Module
EZAFTPMK

Procedure name
SiteCheck®

EZA1680W Member names must be specified with partitioned data sets

Explanation
A file member was specified incorrectly. File members must be specified using partitioned data sets such as the PROFILE.TCPIP data set. The file set is not accepted.

System action
FTP continues.

Operator response
Correct the syntax and resubmit the command.

System programmer response
No action is needed.

Module
EZAFTPCG, EZAFTPCP

EZA1681W Local file already exists

Module
EZAFTPCG

EZA1682W To replace it, use the command with the (REPLACE option

Explanation
This message indicates that a file to be transferred has the same name as a local file. The file is not transferred.

System action
FTP continues.

Operator response
Rename the local file and resubmit the command, or resubmit the command with the (REPLACE option, as shown in the following example:

```bash
get filename (Replace
```

System programmer response
No action is needed.

Module
EZAFTPCG

EZA1684W Local file not found
Explanation
A local file that was to be transferred was not found. The file is not transferred.

System action
FTP continues.

Operator response
Correct the file name and resubmit the command. If the error persists, check the local directory using the LS command to make sure the file exists. For more information about the LS command, see the z/OS Communications Server: IP User’s Guide and Commands.

System programmer response
No action is needed.

Module
EZAFTPCG, EZAFTPCP

EZA1685W Invalid local file identifier

Explanation
A local file that was to be transferred has an incorrect file identifier. The file is not transferred.

System action
FTP continues.

Operator response
Correct the file identifier and resubmit the command.

System programmer response
No action is needed.

Module
EZAFTPCG, EZAFTPCP

EZA1686W Invalid character in local file identifier

Explanation
A local file that was to be transferred was submitted with an incorrect character in the file identifier. The file is not transferred.

System action
FTP continues.

Operator response
Resubmit the command with the correct file identifier.

System programmer response
No action is needed.
EZA1687W  Failure attempting to store a member of a partitioned data set

Explanation
FTP was unable to store a member of a partitioned data set because the name was typed incorrectly or because the member no longer exists. The file is not transferred.

System action
FTP continues.

Operator response
Check to make sure that the member is still in storage. If the member is still in storage, resubmit the command with the correct name.

System programmer response
No action is needed.

EZA1690W  Failure attempting to close the local data set

Explanation
FTP was unable to close the local data set because the data set name was given incorrectly or the data set no longer exists.

System action
FTP continues.

Operator response
Check to make sure the data set exists. If so, resubmit the command with the correct data set name.

System programmer response
No action is needed.

Module
EZAFTPCG

EZA1691I  srestart not supported for structure structure

Explanation
An srestart subcommand was issued to restart a file transfer, but the structure setting is not file. structure is the current structure setting.

System action
FTP stops processing srestart and prompts for another subcommand.

Operator response
If file structure was in effect during the original file transfer, use the structure file subcommand to change the structure to file and issue srestart again. If file structure was not in effect during the original file transfer, you cannot use srestart to restart the file transfer.
System programmer response
No action is needed.

Module
EBAFTPCB

Procedure name
srestart()

EZA1692I  srestart not supported for mode mode

Explanation
An srestart subcommand was issued to restart a file transfer, but the current mode is not valid for srestart. Only stream mode is valid for srestart.
mode is the current mode.

System action
FTP stops processing srestart and prompts for another subcommand.

Operator response
If stream mode was in effect during the original file transfer, issue the mode stream subcommand to change the mode to stream and issue srestart again. If stream mode was not in effect during the original file transfer, you cannot use srestart to restart the file transfer.

System programmer response
No action is needed.

Module
EBAFTPCB

Procedure name
srestart()

EZA1693I  srestart not supported for filetype type

Explanation
An srestart subcommand was issued to restart a file transfer, but the current file type is not valid for srestart. Only filetype=SEQ is valid for srestart.
type is the current file type setting.

System action
FTP stops processing srestart and prompts for another subcommand.

Operator response
If the SEQ file type was in effect during the original file transfer, issue the site filetype=SEQ subcommand to change the file type to SEQ and issue srestart again. If SEQ file type was not in effect during the original file transfer, you cannot use srestart to restart the file transfer.
System programmer response
No action is needed.

Module
EZAFTPCB

Procedure name
srestart()

EZA1694I  srestart not supported for option sunique

Explanation
An srestart subcommand was issued to restart a file transfer, but the sunique (store-unique) option is in effect.

System action
FTP stops processing srestart and prompts for another subcommand.

Operator response
Use the get or put subcommands instead of srestart to transfer the file.

System programmer response
No action is needed.

Module
EZAFTPCB

Procedure name
srestart()

EZA1695I  srestart not supported for data type type

Explanation
An srestart subcommand was issued to restart a file transfer, but the current data type is not valid for srestart. Valid data types for srestart are I (binary), A (ASCII), and E (EBCDIC).

type is the current data transfer type as described in the z/OS Communications Server: IP User's Guide and Commands.

System action
FTP stops processing srestart and prompts for another subcommand

Operator response
Set the data type to the data type in effect during the original file transfer, then issue srestart again. If the data type in effect during the original file transfer is not valid for srestart, you cannot use srestart to restart the file transfer. You must use the get or put subcommands to transfer the file.

System programmer response
No action is needed.
Module
EZAFTPCB

Procedure name
srestart()

EZA1696I  srestart option failed - issue subcommand

Explanation
An **srestart** subcommand was issued to restart a file transfer, but ftp could not restart file transfer. **option** is the option specified on the **srestart** subcommand. **subcommand** is the subcommand suggested by FTP to transfer the file.

**System action**
FTP stops processing **srestart** and prompts for another subcommand.

**Operator response**
Issue the **subcommand** to transfer the file.

**System programmer response**
If the FTP trace was active, you can check the FTP trace output for error messages related to **srestart** option. See the following publications for more information about the FTP trace:
- z/OS Communications Server: IP User's Guide and Commands
- z/OS Communications Server: IP Configuration Guide
- z/OS Communications Server: IP Configuration Reference
- z/OS Communications Server: IP Diagnosis Guide

Module
EZAFTPCB

Procedure name
srestart()

EZA1698I  srestart failed - SIZE response is not valid

Explanation
An **srestart** subcommand was issued to resume a file transfer from the client to the FTP server. The client sent a **SIZE** command to the server to determine how many bytes had already been transferred. The **SIZE** response returned by the server is not valid, possibly because it points past the end of the client file. The client could not complete the request.

**System action**
FTP stops processing the current subcommand and prompts for the next subcommand.

**Operator response**
Report the error to the system programmer.
System programmer response
Verify that the source and destination files have not changed since the original file transfer was interrupted, and that the **srestart** subcommand was valid for restarting the file transfer. See the *z/OS Communications Server: IP User's Guide and Commands* for information about the **srestart** subcommand. If the files have not changed, and **srestart** was used correctly, report the error to the administrator of the FTP server.

Module
EZAFTPCP

Procedure name
hfs_sndFile()

**EZA1699I** SRESTART { put localfile [remotefile] | get remotefile [localfile]}

Explanation
This message displays the correct format for the **srestart** subcommand, which is used to restart a stream mode file transfer. See the *z/OS Communications Server: IP User's Guide and Commands* for more information about the **srestart** command.

System action
None.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
EZAFTPCL

Procedure name
usage()

**EZA1700I** restart a stream mode file transfer

Explanation
This message displays the purpose of the **srestart** subcommand. See the *z/OS Communications Server: IP User's Guide and Commands* for more information about the **srestart** command.

System action
FTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.
Module
EZAFTPCL

Procedure name
dohelp()

EZA1701I  >>>

Explanation
This message precedes echoes such as PASS ******** and ACCT ******** to acknowledge user-submitted data.

System action
FTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

EZA1702W  Transmission mode mode not implemented for type B.

Explanation
The data type B (double Byte) is not supported while in block or compress transmission mode.

System action
FTP continues.

Operator response
Either change to mode s (stream) or change the data type to EBCDIC and reissue the command.

System programmer response
No action is needed.

Module
EZAFTPCG, EZAFTPCP

EZA1719I  subcommand not supported for UNIXFILETYPE=FIFO

Explanation
A subcommand was issued to restart a file transfer to or from a file in the client z/OS UNIX file system, but the value currently configured for the UNIXFILETYPE parameter is not valid for the subcommand. Only UNIXFILETYPE FILE is valid for a subcommand when the local file is a z/OS UNIX file.

See the information about the UNIXFILETYPE statement in z/OS Communications Server: IP Configuration Reference and the LOCSIte subcommand in z/OS Communications Server: IP User’s Guide and Commands for information about the UNIXFILETYPE configuration option.

In the message text:

subcommand
The subcommand that you entered to restart a file transfer.
System action
FTP stops processing the subcommand specified by the subcommand value and prompts you to enter another subcommand.

Operator response
Not applicable.

System programmer response
None.

User response
If UNIXFILETYPE FILE was configured during the original file transfer, you can issue the LOCSIte subcommand to change the UNIXFILETYPE value back to FILE and issue the specified subcommand again or you can start the interrupted file transfer from the beginning.

If UNIXFILETYPE FIFO was configured during the original file transfer, you cannot resume the interrupted file transfer with a REStart or SRestart subcommand. See the information about restarting a failed data transfer in z/OS Communications Server: IP User's Guide and Commands.

Problem determination
Not applicable.

Source
z/OS Communications Server TCP/IP: FTP

Module
ezaftpcb

Routing code

Descriptor code
12

Automation
Not applicable for automation.

Example

EZA1460I Command:
srestart get /etc/hosts
EZA1719I srestart not supported for UNIXFILETYPE=FIFO
EZA1696I srestart get failed - issue get
EZA1460I Command:

EZA1720I REPLACE option not allowed for UNIXFILETYPE=FIFO

Explanation
You entered a get or mget subcommand, specifying the REPLACE option and a z/OS UNIX local file when UNIXFILETYPE= FIFO was configured. The REPLACE option is not valid for z/OS UNIX files when
UNIXFILETYPE=FIFO is configured. If the local file is a z/OS UNIX named pipe, you cannot overwrite the contents of the named pipe. Writing into a named pipe always appends to the contents of the named pipe.

**System action**

FTP stops processing the current subcommand and prompts you to enter another subcommand.

**Operator response**

Not applicable.

**System programmer response**

None.

**User response**

If the local file is a z/OS UNIX regular file, issue the LOCSIte subcommand with the UNIXFILETYPE=FILE parameter. Then issue the original subcommand again.

If the local file is a z/OS UNIX named pipe, issue the subcommand without the REPLACE parameter. The incoming data will be appended to the contents of the named pipe.

**Problem determination**

To determine whether a z/OS UNIX file is a regular file or a named pipe, use the z/OS UNIX `ls` command. See the information about the long output format in z/OS UNIX System Services Command Reference.

**Source**

z/OS Communications Server TCP/IP: FTP

**Module**

ezaftpcg.c

**Routing code**

10

**Descriptor code**

12

**Automation**

Not applicable for automation.

**Example**

```plaintext
EZA1460I Command: get /etc/hosts /tmp/trash/x (rep
EZA1720I REPLACE option not allowed for UNIXFILETYPE=FIFO
EZA1460I Command:

EZA1721W Server not responding, closing connection.
```

**Explanation**

The FTP client is closing the connection to the FTP server because the server is not responding.
System action
FTP continues.

Operator response
Notify the system programmer of the error.

System programmer response
Use the Ping command to make sure that the server is accessible to the system. If the server is accessible, check to make sure it is executing FTP properly. See the z/OS Communications Server: IP System Administrator's Commands for more information about the Ping command.

EZA1722I  UNIXFILETYPE=FIFO requires FILETYPE=SEQ

Explanation
You attempted to transfer to or from a file in the z/OS UNIX file system when UNIXFILETYPE=FIFO was configured. The current FILETYPE value is not SEQ. This combination of values is not supported.

System action
FTP stops processing the current subcommand, and prompts you to enter the next subcommand.

Operator response
None.

System programmer response
None.

User response
Do one of the following to set a valid combination of parameters.

• If the local file is a z/OS UNIX regular file, issue the LOCSIte subcommand with the UNIXFILETYPE=FILE parameter to change the UNIXFILETYPE value.
• If the local file is a z/OS UNIX named pipe, issue the LOCSIte subcommand with the FILETYPE=SEQ parameter to change FILETYPE.

Then reissue the file transfer subcommand.

Problem determination
To determine whether a z/OS UNIX file is a regular file or a named pipe, use the z/OS UNIX ls command. See the information about the long output format in z/OS UNIX System Services Command Reference.

Module
ezaftpcg.c, ezaftpcp.c

Routing code
10
EZA1725I  subcommand fails -- localFile is not a named pipe

Explanation
The subcommand that you issued specified a file in the client z/OS UNIX file system as the local file. The local file is not a z/OS UNIX named pipe, and UNIXFILETYPE=FIFO is configured. A local file in the z/OS UNIX file system must be a named pipe when UNIXFILETYPE=FIFO is configured.

For more information about the UNIXFILETYPE configuration option, see the following sources:

- The UNIXFILETYPE statement in z/OS Communications Server: IP Configuration Reference
- The LOCSIte subcommand in z/OS Communications Server: IP User's Guide and Commands
- The information about using z/OS UNIX System Services named pipes in z/OS Communications Server: IP User's Guide and Commands

In the message text:

subcommand
  The subcommand that failed.

localFile
  The local file in the client's z/OS UNIX file system.

System action
FTP stops processing subcommand, and prompts you to enter the next subcommand.

Operator response
None.

System programmer response
None.

User response
If you intended to specify a named pipe, do one of the following:

- Reissue the subcommand with a z/OS UNIX named pipe specified as the local file.
- If the subcommand is get or mget, reissue the subcommand and specify a name that does not yet exist in the z/OS UNIX file system.

If you did not intend to specify a named pipe, issue the LOCSIte subcommand with the UNIXFILETYPE=FILE parameter. Then issue the subcommand again.

Problem determination
To determine whether a z/OS UNIX file is a regular file or a named pipe, use the z/OS UNIX ls command.
To create a named pipe, use the z/OS UNIX `mkfifo` or `mknode` command. See the information about the long output format in z/OS UNIX System Services Command Reference.

EZA1726I local file must be a named pipe when UNIXFILETYPE=FIFO
EZA1460I Command:
```

EZA1733I waiting up to seconds seconds for process process to open localNamedPipe

Explanation
You issued a subcommand that specified a z/OS UNIX named pipe as the local file. The FTP client must wait for another process to open the named pipe before it can continue processing.

In the message text:

- **seconds**
  The number of seconds that the FTP client will wait for another process to open the named pipe. You can use the FIFOOPENTIME configuration option to change this value.

- **process**
  Indicates whether the other process must open the named pipe for writing or reading. Valid values are:
  - **read**
    FTP expects another process to open the named pipe for reading.
  - **write**
    FTP expects another process to open the named pipe for writing

- **localNamedPipe**
  The z/OS UNIX named pipe that you specified. See the information about using z/OS UNIX System Services named pipes in z/OS Communications Server: IP User's Guide and Commands.

System action
The FTP client waits up to the number of seconds specified by the seconds value for another process to open the named pipe. If another process opens the named pipe as expected, FTP continues processing the current subcommand. If another process does not open the named pipe within the time specified, FTP issues message EZA1734I and stops processing the current subcommand.
Operator response
None.

System programmer response
Start the process that will read from or write to the named pipe.

User response
None.

Problem determination
See the user response.

Source
z/OS Communications Server TCP/IP: FTP

Module
ezaftpcg.c, ezaftpcp.c

Routing code
10

Descriptor code
12

Automation
Not applicable.

Example
In the first example, the user set the UNIXFILETYPE configuration option to FIFO and the FIFOOPENTIME configuration option to 30. The user issued a PUT subcommand that specified the /tmp/sample.fifo named pipe. FTP waited for another process to open the named pipe for writing. When another process opened the named pipe, FTP was able to continue processing the PUT subcommand.

EZA1460I Command:
locsite unixfiletype=fifo fifoopentime=30
EZA1460I Command:
put /tmp/sample.fifo
EZA1733I waiting up to 30 seconds for write process to open /tmp/sample.fifo
EZA1701I >>> PORT 9,42,105,36,4,10
200 Port request OK.
EZA1701I >>> STOR sample.fifo
125 Storing data in the Null directory (*dev.null).
250 Transfer completed successfully.
EZA1617I 787 bytes transferred in 1.260 seconds. Transfer rate 0.62 Kbytes/sec.
EZA1460I Command:

In this example, the user entered a PUT subcommand that specified the /tmp/sample.fifo named pipe. FTP waited for 30 seconds for another process to open the named pipe for writing. No other process opened the named pipe. FTP issued message EZA1734I to indicate that it stopped waiting.

EZA1460I Command:
put /tmp/sample.fifo
EZA1733I waiting up to 30 seconds for write process to open /tmp/sample.fifo
EZA1734I timer expired waiting for write process to open /tmp/sample.fifo
EZA1460I Command:
EZA1734I  timer expired waiting for process process to open localFile

Explanation
The FTP client tried to open a named pipe in the z/OS UNIX file system. The client waited for the number of seconds specified by the FIFOOPENTIME configuration option. The FIFOOPENTIME time limit expired before another process opened the named pipe.

In the message text:

process  Indicates whether FTP was waiting for another process to open the named pipe for writing or reading. Valid values are:

read  FTP was trying to open the named pipe for writing as part of inbound file transfer. The FTP client cannot write to a named pipe until another process on the client host opens the named pipe for reading.

write  FTP was trying to open the named pipe for reading as part of outbound file transfer. The FTP client cannot read from a named pipe until another process on the client host opens the named pipe for writing.

localFile  The name of the named pipe.

Message EZA1733I precedes this message, and indicates how long the FTP client waits for another process to open a named pipe.

See information about the UNIXFILETYPE (FTP client and server) statement and the FIFOOPENTIME (FTP client and server) statement in z/OS Communications Server: IP Configuration Reference.

System action
FTP stops processing the current subcommand, and prompts for another subcommand.

Operator response
None.

System programmer response
Start a process at the FTP client host:

• When the process value is write, start the process that will write to the named pipe.
• When the process value is read, start the process that will read from the named pipe.

After you start the process, attempt the file transfer again.

User response
Perform the following steps:

1. Consider increasing the FIFOOPENTIME configured value before attempting the file transfer again.
   a. Inspect message EZA1733I to determine the FIFOOPENTIME configured value.
   b. Issue the LOCSIte subcommand with the FIFOOPENTIME parameter to specify a larger value.

   See the information about the LOCSIte subcommand in z/OS Communications Server: IP User's Guide and Commands for information about the FIFOOPENTIME configuration option.

2. Start the file transfer again. If restarting the file transfer does not solve the problem, notify the System Programmer.
Problem determination
None.

Automation
Not applicable.

Example

EZA1460I Command:
get /etc/hosts /tmp/sample.fifo
EZA1733I waiting up to 30 seconds for read process to open /tmp/sample.fifo
EZA1734I timer expired waiting for read process to open /tmp/sample.fifo
EZA1460I Command:
put /tmp/sample.fifo
EZA1733I waiting up to 30 seconds for write process to open /tmp/sample.fifo
EZA1734I timer expired waiting for write process to open /tmp/sample.fifo
EZA1460I Command:

EZA1735I  Std Return Code = rc, Error Code = ec

Explanation
FTP has ended with an error only because the user has specified EXIT as a start parameter. Normally FTP would continue.

rc is the standard return code. rc is in the format yyxxx, where

yy  The subcommand code, which is a number from 0 to 99.

xxx  This is the last reply code received from the FTP server. If a subcommand failed before a reply was received from the server, this value is 000.

ec is the client error code set by the FTP client.

System action
The FTP client ends.

Operator response
To determine the cause of the error, see FTP return codes in z/OS Communications Server: IP User’s Guide and Commands for information about FTP return codes, including subcommand codes, client error codes, and reply codes.
**System programmer response**
No action is needed.

**Module**
EZAFTPCX

**EZA1736I Argument**

**Explanation**
FTP is echoing valid arguments from user-submitted data or indicating a QUIT command was generated by unexpected end of file.

**System action**
FTP continues when echoing valid arguments or terminates when unexpected end of file is encountered.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
EZAFTPCU

**EZA1737E Command input too long.**

**Explanation**
The FTP command input line exceeds the expected length.

**System action**
FTP bypasses the command and continues.

**Operator response**
Correct the input command stream.

**System programmer response**
No action is needed.

**Module**
EZAFTPCU

**EZA1739I subcommand failed - timer expired while reading from named pipe**

**Explanation**
While the FTP client was sending data from the named pipe to the FTP server, it tried to read from a named pipe in the client z/OS UNIX file system. The client waited for the number of seconds specified by the FIFOIOTIME...
configured value for the read to complete. One reason for this timeout is that the process that is writing to the named pipe stopped writing data without closing the named pipe.

Any data that was sent from the client to the server before the timer expired has been permanently removed from the named pipe.

See the following sources:

- The information about the FIFOIOTIME (FTP client and server) statement in z/OS Communications Server: IP Configuration Reference
- The information about the LOCSite subcommand in z/OS Communications Server: IP User's Guide and Commands
- The information about using z/OS UNIX System Services named pipes in z/OS Communications Server: IP User's Guide and Commands

In the message text:

subcommand

The subcommand that failed because FTP could not read from the named pipe.

System action

FTP stops processing the current subcommand, and prompts for the next subcommand.

Operator response

None.

System programmer response

Perform the following steps:

1. Consider increasing the FIFOIOTIME configured value.
   a. Use the LOCStat subcommand and specify the FIFOIOTIME parameter to query the current FIFOIOTIME value.
   b. Use the LOCSite subcommand and specify the FIFOIOTIME parameter to increase the FIFOIOTIME value.

   If you anticipate long idle periods, consider increasing local timers to prevent connection timeouts. See the information about the DATACTTIME (FTP client) statement, the FTPKEEPALIVE (FTP client and server) statement, and the DATAKEEPALIVE (FTP client and server) statement in z/OS Communications Server: IP Configuration Reference for more information about FTP client timers.

2. Determine why the process that writes to the named pipe stopped writing data, but did not close the named pipe.

3. Reissue the subcommand. Any data that was sent from the client to the server before the timer expired has been removed from the named pipe. You must take this into consideration before repeating the file transfer.

User response

Report the problem to the system programmer.

Problem determination

See the system programmer response.

Example

EZA1770I  Source IP address is missing

EZA1771I  subcommand fails: name is of an unsupported type

Explanation
The data set name type (DSNTYPE) or organization (DSORG) of data set name is not supported by the subcommand. The supported data set types are:
• z/OS physical sequential data sets
• z/OS partitioned data sets
• z/OS libraries
• z/OS generation data sets

In the message text:

**subcommand**

The name of the FTP subcommand. The value can be MVSGET or MVSPUT.

**name**

The name of the data set that is specified on the FTP subcommand.

For more information about the MVSGET or MVSPUT subcommand, see the z/OS Communications Server: IP User's Guide and Commands.

**System action**

MVSGET or MVSPUT subcommand fails. FTP continues processing.

**Operator response**

No action is needed.

**System programmer response**

No action is needed.

**User response**

Reissue the subcommand with a data set that is of a supported type.

```bash
mvsget 'user1.ftp.ps' /tmp/test
EZA1771I MVSGET fails: /tmp/test is of an unsupported type
```
EZA1772I FTP: EXIT has been set.

Explanation
An exit has been set. FTP will exit the session for certain FTP errors with a nonzero MVS return code. See the z/OS Communications Server: IP User's Guide and Commands for information about FTP EXIT Return Codes.

System action
FTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
EZAFTPCY

EZA1773I Unable to delete dsname (Error code: error_code Reason code: reason_code S99ERSN code: s99reason_code)

Explanation
FTP attempted to delete the data set dsname, but the deletion did not complete successfully. Possible causes for this error include:

• The data set is in use by someone else.
• The data set has an unexpired retention period.
• The data set is located on a tape volume.
• The direct access volume containing the data set is not write accessible.

In the message text:

dname
The name of the data set

error_code
S99ERROR field from DYNALLOC

reason_code
S99INFO field from DYNALLOC

s99reason_code
S99ERSNS field from DYNALLOC

For more information about the S99ERROR, S99INFO, and S99ERSNS fields from DYNALLOC, see the z/OS MVS Programming: Authorized Assembler Services Guide.

System action
FTP continues processing.

Operator response
No action is needed.
System programmer response
The error_code, reason_code, and s99reason_code values displayed contain the S99ERROR, S99INFO, and S99ERN fields from DYNALLOC. See Interpreting DYNALLOC return codes in z/OS MVS Programming: Authorized Assembler Services Guide to determine why the data set cannot be deleted and to identify the actions to take to correct the problem.

User response
Save the message for problem determination and contact the system programmer.

Example
mvsget 'user1.ftp.ps'  'user1.ftp.exist'
EZA1779I MVSGET fails: the target data set already exists
EZA1780I To reallocate it, issue the subcommand with the REALLOCATE option
EZA1460I Command:

**EZA1784E** Data to be written exceeds maximum file LRECL; source ASCII file probably lacks record delimiters.

Explanation
This message is issued when an FTP GET subcommand converts an ASCII format source file to an EBCDIC format destination file if the number of bytes waiting to be written to the disk exceeds the maximum supported logical record length (LRECL), and the NOWRAPrecord parameter was specified for the LOCSITE command, preventing the client from automatically wrapping longer than allowable records to the next line. The file transfer is not completed. No data is written to disk.

System action
If FTP was invoked with the EXIT option, the session is ended with return code 16150. Otherwise, FTP continues and waits for the next user command.

Operator response
If necessary, restart FTP. Before attempting to transfer the file again, submit the LOCSITE command, specifying the WRAPrecord parameter, allowing the FTP client to wrap longer than allowable records onto a new line, then resubmit the GET command.

System programmer response
No action is needed.

**EZA1787W** Not authorized to access requested local file.

Explanation
The user is not authorized to access the requested local file. Access can be granted by the file owner. Otherwise, the file cannot be accessed.

System action
FTP continues.

Operator response
Contact the administrator for the file and request access.

System programmer response
No action is needed.

Module
EZAFTPCG, EZAFTPCP

**EZA1788I** ACCOUNT
Explanation
This is a prompt for accounting information from the target host system.

System action

Operator response
No action is needed.

System programmer response
No action is needed.

Module
EZAFTPCZ

EZA1865I Command not Supported. Translation Table not Loaded.

Explanation
A valid FTP client TYPE subcommand was entered to change the current transfer type, but the DBCS translation table required for that transfer type is not loaded. The current FTP transfer type is unchanged.

System action
The program continues.

Operator response
Consult the system programmer.

System programmer response
Configure a valid DBCS binary translate table data set in the search order hierarchy for the required DBCS translation table, and specify LOADDBCSTABLES in TCPIP.DATA for the required DBCS translation table. See z/OS Communications Server: IP Configuration Reference for more information about the loading and customizing of DBCS translation tables.

Module
EZAFTPCT
Chapter 4. EZA2xxx messages

EZA2063I    Local directory is partitioned data set directory

Explanation
The name of the partitioned data set. A partitioned data set (PDS) is a data set in direct access storage that is
divided into partitions called members, each of which can contain a program, part of a program, or data.

System action
FTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

EZA2064I    Local directory is directory

Explanation
The current local directory.

System action
FTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
EZAFTPCL

EZA2065I    Local directory is null string.

Explanation
No local directory name has been specified.

System action
FTP continues.

Operator response

EZA2072I Final directory name is too large.
Explanation
The directory name is larger than the field specified. The directory name cannot be more than 8 characters in length.

System action
FTP continues.

Operator response
Enter the command with the correct syntax and try it again. See the z/OS Communications Server: IP User's Guide and Commands for more information.

System programmer response
No action is needed.

EZA2073I  A qualifier in pathname begins with an invalid character.

Explanation
You entered a subcommand with the pathname parameter pathname. The pathname specified in the subcommand is incorrect.

System action
FTP continues.

Operator response
Enter the subcommand with a valid pathname and try it again.

System programmer response
No action is needed.

Module
EZAFTPCD

EZA2076I  Directory is already null. ".." operand ignored.

Explanation
An attempt was made to back up one directory level, when the local directory is already null. The local directory remains the null directory.

System action
FTP continues.

Operator response
None

System programmer response
None
EZA2080I  Data sets will be allocated on *volume*

Explanation
This message displays the list of volumes on which new data sets will be allocated during an FTP session.

System action
FTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

EZA2081I  Local directory name set to partitioned data set *directory*

Explanation
The name of the local directory in the partitioned data set. A partitioned data set (PDS) is a data set in direct access storage that is divided into partitions called members, each of which can contain a program, part of a program, or data.

System action
FTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

EZA2082I  Local directory name set to *directory*

Explanation
This message displays the name of the local directory.

System action
FTP continues.

Operator response
No action is needed.
System programmer response
No action is needed.

Module
EZAFTPCD

**EZA2083I**  Local directory set to null string.

Explanation
No local directory has been specified. The local directory field has been set to null. A null string is a character or bit string with a length of 0.

System action
FTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
EZAFTPCD

**EZA2090I**  directory is a migrated data set and Noautorecall is specified. Local directory name not changed.

Explanation
The directory specified is a migrated data set. A migrated data set is a data set that has been moved from one hierarchy of storage to another. The local directory name is not changed. See the z/OS Communications Server: IP User’s Guide and Commands for more information about the LCD - Changing the Working Level Qualifier - subcommand.

System action
FTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
EZAFTPCD

**EZA2091I**  Error recalling directory. Local directory name is not changed.

Explanation
The directory name specified could not be recalled. The directory name remains unchanged.
**System action**
FTP continues.

**Operator response**
Enter the command with the correct syntax and try it again. See the z/OS Communications Server: IP User's Guide and Commands for more information.

**System programmer response**
No action is needed.

**Module**
EZAFTPCD

**EZA2092I** directory is on a direct access volume that is not mounted and Noautomount is specified.

**Explanation**
The local directory remains unchanged because the directory name specified was not found in the mounted direct access volume. The NOAUTOMount parameter can be specified in the SITE or LOCSITE subcommands. NOAUTOMount prevents automatic mounting of direct access volumes.

**System action**
FTP continues.

**Operator response**
Enter the command with the correct syntax and try it again. See the z/OS Communications Server: IP User's Guide and Commands for more information.

**System programmer response**
No action is needed.

**Module**
EZAFTPCD

**EZA2093I** Error mounting volume for directory. Local directory name is not changed.

**Explanation**
An unexpected condition occurred in trying to mount the direct access volume for the directory name specified. The local directory name remains unchanged.

**System action**
FTP continues.

**Operator response**
Enter the command with the correct syntax and try it again. See the z/OS Communications Server: IP User's Guide and Commands for more information about the LCD subcommand.

**System programmer response**
No action is needed.
Module
EZAFTPCD

**EZA2097I**  No automatic recall of migrated data sets.

**Explanation**
No automatic recall has been specified for migrated data sets. The NOAUTORecall parameter can be specified in the SITE and LOCSITE subcommand. NOAUTORecall prevents automatic recall of a migrated hierarchical storage manager (HSM) data set. See the *z/OS Communications Server: IP User's Guide and Commands* for more information.

**System action**
FTP continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

Module
EZAFTPCK

**EZA2098I**  Automatic recall of migrated data sets.

**Explanation**
The AUTORecall parameter has been specified. The AUTORecall permits automatic recall of migrated hierarchical storage manager (HSM) data sets. This parameter is specified in the SITE and LOCSITE subcommand.

**System action**
FTP continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

Module
EZAFTPCK

**EZA2099I**  No automatic mount of direct access volumes.

**Explanation**
No automatic mount of direct access volumes has been specified. The NOAUTOMount parameter can be specified in the SITE or LOCSITE subcommands. NOAUTOMount prevents automatic mounting of direct access volumes. See the *z/OS Communications Server: IP User's Guide and Commands* for more information.
**System action**
FTP continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
EZAFTPCK

**EZA2100I**  Automatic mount of direct access volumes.

**Explanation**
Automatic mount of direct access volumes has been specified. The AUTOMount parameter can be specified in the SITE or LOCSITE subcommands. AUTOMount permits automatic mounting of direct access volumes. See the z/OS Communications Server: IP User's Guide and Commands for more information.

**System action**
FTP continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
EZAFTPCK

**EZA2101I**  Data set mode. (Do not treat each qualifier as a directory.)

**Explanation**
The DATASETmode option has been specified for the SITE or LOCSITE subcommand. DATASETmode specifies that all the data set qualifiers below the current directory are treated as entries in the directory. See the z/OS Communications Server: IP User's Guide and Commands for more information.

**System action**
FTP continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.
**Module**
EZAFTPCK

**EZA2102I** Directory mode. (Treat each qualifier as a directory.)

**Explanation**
Directory mode has been specified. The directory mode is declared in the Directorymode parameter of the SITE and LOCSITE subcommands. This parameter specifies that only the data set qualifier immediately below the current directory is treated as an entry in the directory. In directory mode, this qualifier is only used by the MPUT, MGET, LS, and DIR subcommands. See the z/OS Communications Server: IP User's Guide and Commands for more information.

**System action**
FTP continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
EZAFTPCK

**EZA2103I** FileType is SEQ (Sequential - the default).

**Explanation**
This message is displayed when you issue a LOCSTAT command.

**System action**
Processing continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
EZAFTPCL

**Procedure name**
LOCSTAT

**EZA2105I** FileType is SQL (Query to perform).
**Explanation**
This message is displayed when you issue a LOCSTAT command.

**EZA2106I  srestart option not supported for MVS data sets**

**Explanation**
An srestart subcommand was entered to restart a file transfer involving an MVS data set. The srestart option is not supported for MVS data sets.

*option* is the srestart subcommand option entered.

**System action**
FTP stops processing the current subcommand, and prompts for the next subcommand.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
EZAFTPCB

**Procedure name**
srestart_get(), srestart_put()

**EZA2107I  option option is not supported for a proxy subcommand**

**Explanation**
You entered a proxy subcommand that is valid for proxy sessions, but you included a subcommand option that is not supported for proxy sessions.

*option* is the option that is not supported.

**System action**
The FTP client rejects the subcommand. Processing continues.

**Operator response**
Either issue the proxy subcommand without the option, or log in to the proxy server as your primary session and issue the subcommand as a primary session command.

**System programmer response**
No action is needed.

**Module**
ezaftpcr

**Procedure name**
mkdir()
**EZA2108I**   **Confidence=confidence_level for action of name**

**Explanation**
This message is issued to report the level of confidence the FTP client has in the successful completion of a data transfer when CHKCONFIDENCE TRUE is specified or defaulted in the client's FTP.DATA data set.

*confidence_level* is the level of confidence that the FTP client has in the completion of the transfer. Values for *confidence_level* are:

**High**
While successful completion of the transfer cannot be guaranteed, the FTP client detected no reason to doubt the successful completion of the transfer.

**NoEOF**
The FTP client detected a missing EOF marker in a STRU R or MODE B or C inbound file. This level is not reported when another problem is detected.

**Low**
The FTP client detected a problem with completion of the transfer such as failure of the server to respond after the transfer or another reported error. Low overrides NoEOF if both conditions are present.

*action* is the action taken on the file or data set. Values for *action* are:

**APPEND**
File or data set is being appended by the FTP client.

**GET**
File or data set is being retrieved by the FTP client.

**MGET**
Files or data sets are being retrieved by the FTP client.

**MPUT**
Files or data sets are being sent by the FTP client.

**PUT**
File or data set is being sent by the FTP client.

**RESTART (OF GET)**
Retrieval of file or data set by FTP client restarted.

**RESTART (OF PUT)**
Sending of file or data set by FTP client restarted.

**SRESTART GET**
Stream mode retrieval of file or data set by FTP client restarted.

**SRESTART PUT**
Stream mode sending of file or data set by FTP client restarted.

*name* is the name of the file or data set being transferred.

**System action**
FTP continues.

**Operator response**
Check to see whether the transfer completed successfully and try again if necessary.

**System programmer response**
No action is needed.

**Module**
EZAFTPCG, EZAFTPCP

hfs_rcvFile, mvs_rcvFile, sndFile

EZA2109I  Confidence level of data transfers is checked and reported

Explanation
This message is issued in response to the LOCSTAT subcommand when CHKCONFIDENCE TRUE is coded in the client's FTP.DATA. It means that the confidence level in the successful completion of transfers from or to the FTP client will be determined and reported in message EZA2108I.

System action
FTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
EZAFTPCL

Procedure name
locstat

EZA2110I  Confidence level of data transfers is neither checked nor reported

Explanation
This message is issued in response to the LOCSTAT subcommand when CHKCONFIDENCE FALSE is coded in the client's FTP.DATA. This means that the confidence level in successful completion of data transfers will not be determined or reported. This does not disable error reporting.

System action
FTP continues.

Operator response
If you want to activate confidence checking and reporting, see the information about the CHKCONFIDENCE statement in z/OS Communications Server: IP Configuration Reference for information about coding the CHKCONFIDENCE statement in FTP.DATA.

System programmer response
No action is needed.

Module
EZAFTPCL

EZA2111I  Outbound SBCS ASCII data uses lt_chars line terminator
Explanation
This message is issued in response to the LOCSTAT subcommand. Each line of single-byte data being transferred to the server and translated to ASCII in the FTP client will use the displayed line terminator. This value is determined by the LOCSITE SBSENDEOL parameter or the SBSENDEOL FTP.DATA statement.

lt_chars is the line terminator that will be used. Values for lt_chars are:

CRLF
Single-byte data translated to ASCII will use the combination of a carriage return (x'0D') and line feed (x'0A') to terminate each line. This is the default and the standard line terminator defined by RFC 959. The z/OS server and client can receive ASCII data only in this format.

CR
Single-byte data translated to ASCII will use a carriage return (x'0D') only to terminate each line.

LF
Single-byte data translated to ASCII will use a line feed (x'0A') only to terminate each line.

no
Single-byte data translated to ASCII will use no line terminator characters.

System action
FTP continues.

Operator response
If it is necessary to change the lt_chars setting, use the LOCSITE subcommand with the SBSENDEOL parameter, or code an SBSENDEOL statement in FTP.DATA.

System programmer response
No action is needed.

Module
EZAFTPCL

Procedure name
locstat

EZA2112I Outbound MBCS ASCII data uses lt_chars line terminator

Explanation
This message is issued in response to the LOCSTAT subcommand. Each line of multi-byte data being transferred to the server and translated to ASCII in the FTP client will use the displayed line terminator. This value is determined by the LOCSITE MBSENDEOL parameter or the MBSENDEOL FTP.DATA statement.

lt_chars is the line terminator that will be used. Values for lt_chars are:

CRLF
Multi-byte data translated to ASCII will use the combination of a carriage return (x'0D') and line feed (x'0A') to terminate each line. This is the default and the standard line terminator defined by RFC 959. The z/OS server and client can receive ASCII data only in this format.

CR
Multi-byte data translated to ASCII will use a carriage return (x'0D') only to terminate each line.

LF
Multi-byte data translated to ASCII will use a line feed (x'0A') only to terminate each line.

no
Multi-byte data translated to ASCII will use no line terminator characters.
**System action**
FTP continues.

**Operator response**
Change the setting, if necessary, using the LOCSITE MBSENDEOL parameter or the MBSENDEOL FTP.DATA statement.

**System programmer response**
No action is needed.

**Module**
EZAFTPCL

**Procedure name**
locstat

**EZA2117I**  
Client SBSENDEOL must be CRLF for stream mode restart of put

**Explanation**
This message is displayed when the SRESTART PUT subcommand is issued while SBSENDEOL is not set to CRLF. The client cannot reliably restart a PUT operation unless the SBSENDEOL setting was CRLF during the interrupted PUT or APPEND subcommand. Therefore, SRESTART PUT is disabled for the remainder of this FTP login session. See the information about the SBSENDEOL statement in the z/OS Communications Server: IP Configuration Reference for more information about SBSENDEOL settings.

**System action**
The FTP client stops processing the SRESTART PUT subcommand.

**Operator response**
The file transfer must be started again from the beginning. If you continue to experience this error, report the error to the system programmer.

**System programmer response**
Most servers do not require an SBSENDEOL setting other than the default, CRLF. If SBSENDEOL is coded as a different value in FTP.DATA or you use the LOCSITE subcommand to set the value to anything other than CRLF, users will not be able to issue an SRESTART PUT command to restart a file transfer in stream mode. If your users require the alternate SBSENDEOL value for only certain servers, specify SBSENDEOL CRLF in the client FTP.DATA data set and instruct the users to issue the LOCSITE SBSENDEOL subcommand only after logging in to those servers to allow the users to restart outbound stream mode file transfers to the servers that do not require the alternate SBSENDEOL value.

Consider whether block or compressed mode file transfers would be appropriate for your installation. Block and compressed mode transfers can be restarted if you initiated checkpointing before the file transfer. See the information about restarting a failed data transfer in z/OS Communications Server: IP User's Guide and Commands.

**Module**
EZAFTPCB
**Procedure name**
None.

**EZA2118I**  srestart failed - file transferred while SBSENDEOL not CRLF

**Explanation**
You issued an SRESTART PUT subcommand to resume a stream mode, type ASCII, SBCS file transfer. Previously, while Mode was Stream, Type was ASCII, Encoding was SBCS, and SBSENDEOL was a value other than CRLF, you sent or tried to send a file with a PUT, MPUT, or APPEND subcommand. The FTP client disabled the SRESTART subcommand for the rest of the session because stream mode file transfer restarts are not reliable under these conditions.

**System action**
The FTP client prompts for another subcommand.

**Operator response**
Issue the PUT subcommand to send the file again. If this error occurs often, contact the System Programmer.

**System programmer response**
For file transfers to servers that do not require an alternate SBSENDEOL value, code the default SBSENDEOL value to be CRLF, and instruct the users to issue the LOCSITE subcommand to change the value only after logging into those servers that support alternate SBSENDEOL values for inbound mode stream, type ASCII file transfers. For file transfers to servers that do require an alternate SBSENDEOL value, do not attempt to SRESTART (stream mode restart) Type ASCII outbound transfers.

See the information about the SBSENDEOL statement in the z/OS Communications Server: IP Configuration Reference for more information about the SBSENDEOL, Mode, Type, and Encoding configuration options.

See the information about the LOCSITE subcommand, the SRESTART subcommand, and the PUT subcommand in z/OS Communications Server: IP User's Guide and Commands.

**Module**
EZAFTPCB

**Procedure name**
srestart_put()

**EZA2119I**  Unrecognized parameter option on LOCSTAT subcommand

**Explanation**
The LOCSTAT subcommand was entered with a parameter that is not valid.

In the message text:

*option*
*The parameter that was entered.*

**System action**
The subcommand is not processed. FTP continues.

**Operator response**
Reissue the LOCSTAT subcommand with a valid parameter. See the information about the File Transfer Protocol (FTP) in z/OS Communications Server: IP User's Guide and Commands or transferring files using FTP in z/OS.
Communications Server: IP Configuration Guide. See the information about the LOCSTAT subcommand in z/OS Communications Server: IP User’s Guide and Commands for information about the parameters of the LOCSTAT subcommand.

---

**EZA2121I Command (ee-ss-cccc-rrr):**

**Explanation**
The FTP client is prompting the FTP callable API for another subcommand. The FTP client is also providing the FTP callable API with information about the previous command processed.

*ee* is the 2-digit decimal client error code for the subcommand (00 if no error). The [FTP Client Error Codes](z/OS Communications Server: IP User's Guide and Commands) can be found in *z/OS Communications Server: IP User's Guide and Commands*.

*ss* is the 2-digit decimal code of the FTP client subcommand (all blanks if none). The [FTP subcommand codes](z/OS Communications Server: IP User's Guide and Commands) can be found in *z/OS Communications Server: IP User's Guide and Commands*.

*cccc* is the 4-character FTP command sent to the server (all blanks if no command was sent).

*rrr* is the 3-digit decimal server reply to the FTP command (all blanks if no command was sent).

The following example is a prompt message that is sent after a GET subcommand completes successfully:

```
EZA2121I Command (00-16-RETR-250) :
```

**System action**
The FTP client waits for the next subcommand.

**Operator response**
Enter the next subcommand.

**System programmer response**
No action is needed.

**Module**
EZAFTPCL
Procedure name
promptCallableAPI

EZA2123I   FtpStop (ee-ss-cccc-rrr):

Explanation
This is the final message sent by the FTP client to the FTP Callable API, which indicates that the FTP client has ended and provides the FTP Callable API with information about the last subcommand (if any).

- **ee** is the 2-digit decimal client error code for the subcommand (00 if no error). The FTP Client Error Codes can be found in z/OS Communications Server: IP User's Guide and Commands.
- **ss** is the 2-digit decimal code of the FTP client subcommand (all blanks if none). The FTP subcommand codes can be found in z/OS Communications Server: IP User's Guide and Commands.
- **cccc** is the 4-character FTP command sent to the server (all blanks if no command was sent).
- **rrr** is the 3-digit decimal server reply to the FTP command (all blanks if no command was sent).

The following example is a message that is sent after a QUIT subcommand completes successfully:

EZA2123I FtpStop(00-29-QUIT-221):

DB2® subsystem name is name

Explanation
The name of the Db2® subsystem. The Db2 subsystem is specified in the DB2=db2_name parameter of the SITE or LOCSITE subcommands.

System action
FTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
EZAFTPCK

**EZA2149I**  
SQL output sent in SPREADsheet format.

Explanation
The output generated is sent in spreadsheet format for this SQL file type. This output format is specified in the SPread parameter of the SITE or LOCSITE subcommands.

System action
FTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
EZAFTPCK

**EZA2150I**  
SQL output sent in report (NOSPREAD) format.

Explanation
The output generated is not in spreadsheet format for this SQL file type. This information is specified in the NOSPread parameter of the SITE or LOCSITE subcommands. This parameter indicates that the output is not in spreadsheet format when the file type is SQL.
**System action**
FTP continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
EZAFTPCK

**EZA2151I SQLCOL (column headings) use name**

**Explanation**
The SQLCol parameter has been specified in the SITE or LOCSITE subcommands. The SQLCol=type parameter indicates the column headings of the output file. The following list describes each type:

**Type**

**Description**

**Names**
Names are the column headings. The labels are ignored. This is the hard-coded default.

**Labels**
Uses the labels of the SQL table columns. If any of the columns do not have labels, the corresponding column heading in the output file is given a heading of COLnnn.

**Any**
The label is the first choice for column heading, but if there is no label, the name becomes the column heading.

**System action**
FTP continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
EZAFTPCK

**EZA2152I VolId of Migrated Data Sets is id**

**Explanation**
The volume ID for allocated new migrated data sets.

**System action**
FTP continues.
Operator response
No action is needed.

System programmer response
No action is needed.

Module
EZAFTPCK

EZA2153I Wrapping data into next record.

Explanation
Data is being sent as part of the next record.

System action
FTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
EZAFTPCK

EZA2154I Trailing blanks in records read from RECFM F datasets are discarded.

Explanation
Trailing blanks in records read from fixed record format data sets are discarded.

System action
FTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
EZAFTPCK

EZA2155I Trailing blanks in records read from RECFM F datasets are retained.

Explanation
Trailing blanks in records read from fixed record format data sets are retained.
System action
FTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
EZAFTPCK

EZA2189I Volume disk could not be found.

Explanation
The volume serial specified in the Qdisk parameter of the LOCSITE subcommand could not be found.

System action
FTP continues.

Operator response
Check for the correct command syntax and volume serial number and try the command again. See the z/OS Communications Server: IP User’s Guide and Commands for more information.

System programmer response
No action is needed.

Module
EZAFTPCK

EZA2190I No storage volumes could be found.

Explanation
The Qdisk parameter was entered without a specific volume serial. When this parameter is left blank, statistics about all storage volumes are displayed. No storage volumes were found.

System action
FTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
EZAFTPCK

EZA2192I Percent Free Free Largest Free
Explanation
You entered the FTP client LOCSIte subcommand and specified the QDISK parameter to display space statistics for one or more volumes. This message is the first line of a header for a group of messages that is displayed to report space statistics. See message EZA2194I for more information.

System action
Processing continues.

Operator response
No action is needed.

System programmer response
No action is needed.

User response
No action is needed.

Problem determination
Not applicable.

EZA1460I Command:
EZA2194I  EZA2194I volume_serial percent_free free_cylinders free_tracks l_cylinders l_tracks free_extents use_attribute

Explanation
You entered the FTP client LOCSIte subcommand and specified the QDISK parameter to display space statistics for one or more volumes. This message is part of a group of messages that is displayed to report space statistics. One EZA2194I message is displayed for each volume that you requested.

In the message text:

volume_serial
The volume serial number of a volume on the FTP client host.

percent_free
The percent of free space on the volume that is identified by the volume_serial value.

free_cylinders
The number of free cylinders on the volume that is identified by the volume_serial value.

free_tracks
The number of free tracks on the volume that is identified by the volume_serial value.

l_cylinders
The number of cylinders in the largest free extent on the volume that is identified by the volume_serial value.

l_tracks
The number of tracks in the largest free extent on the volume that is identified by the volume_serial value.

free_extents
The number of free extents on the volume that is identified by the volume_serial value.

use_attribute
The use attribute of the volume that is identified by the volume_serial value.

System action
Processing continues.

EZA1460I Command:

EZA2216W    SQLCOL parameter (value) is not valid.

Explanation
The value submitted for the SQLCOL parameter, which is used to determine the column headings of the output file, was not valid. Valid values for the SQLCOL parameter are:

Type
Description
Names
Uses the names of the Db2 SQL table columns. The labels are ignored.

Labels
Uses the labels of the SQL table columns. If any of the columns do not have labels, the corresponding column heading in the output file is given a heading of COLnnn.

Any
The label of the Db2 SQL table column is the first choice for column heading in the output file. If there is no label, the column name is used.

System action
The SQLCOL parameter is ignored. FTP continues.

Operator response
Resubmit the SITE command with a valid value for the SQLCOL parameter. For more information about the SITE command, see the z/OS Communications Server: IP User’s Guide and Commands.

System programmer response
No action is needed.
**EZA2224I  LANGUAGE [language [-subtag ]]**

**Explanation**
This message displays the correct format for the LANGUAGE subcommand. Use the LANGUAGE subcommand to set the language for FTP replies. For more information about the LANGUAGE subcommand, see the z/OS Communications Server: IP User's Guide and Commands.

**System action**
FTP continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**EZA2225I  ask the server which features and extensions it supports**

**Explanation**
This message displays the purpose of the FEATURE subcommand. For more information about the FEATURE subcommand, see the z/OS Communications Server: IP User's Guide and Commands.

**System action**
FTP continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**EZA2226I  request server replies in another language, or reset language to the default**
Explanation
This message displays the purpose of the LANGUAGE subcommand. For more information about the LANGUAGE subcommand, see the z/OS Communications Server: IP User's Guide and Commands.

System action
FTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
EZAFTPCL

Procedure name
usage()

EZA2227I subcommand rejected. UTF-8 translation table is not available

Explanation
FTP could not process the current subcommand because the UTF-8 translation table is required to complete the command. The UTF-8 translation table is not available to FTP.

System action
FTP stops processing the current subcommand and prompts the user for the next subcommand.

Operator response
Contact the system programmer with the error.

System programmer response
Verify that the National Language Resources component of z/OS Language Environment® is installed, and that all data sets and files pertinent to UCS-2 and UTF-8 conversion are installed. See the z/OS XL C/C++ Programming Guide.

Module
EZAFTPCR

Procedure name
lang()

EZA2228I subcommand not available - client is not configured for UTF-8 encoding

Explanation
FTP cannot process the current subcommand because the subcommand is not valid unless the FTP client is configured for UTF-8 encoding.
System action
FTP stops processing the current subcommand and prompts for the next subcommand.

Operator response
Contact the system programmer with the error message.

System programmer response
Determine whether UTF-8 encoding is appropriate for your installation. If you want UTF-8 encoding, code EXTENSIONS UTF8 in the client’s FTP.DATA. See the z/OS Communications Server: IP Configuration Reference for more information about the EXTENSIONS statement.

Module
ezaftpcr

Procedure name
lang()

EZA2229I UTF-8 encoding has been disabled for this client.

Explanation
The user issued a LANGUAGE subcommand. The client is not allowed to send a LANG command to the server unless it supports UTF-8 encoding of the control connection. The user had earlier issued an FTP client LOCSITE CTRLCONN or LOCSITE CCXLATE subcommand, which caused UTF-8 encoding for the control connection to be disabled.

System action
The LANGUAGE subcommand is ignored. FTP continues processing.

Operator response
If you want to use the language subcommand, exit the FTP client program and start the client again, without issuing LOCSITE subcommands to specify a code page for the control connection. If you want the FTP client to use a specific code page for the control connection, you cannot issue the LANGUAGE subcommand.

System programmer response
No action is needed.

Module
ezaftpcr

Procedure name
language()

EZA2230I Error allocating storage for catalog search

Explanation
The command was entered to list MVS files. FTP was unable to get the necessary storage for the catalog list.

System action
Command processing ends. FTP continues with the next command.
Operator response
Try the command again. If the problem persists, contact the system programmer.

System programmer response
Allocate additional storage for the address space.

Module
EZAFTPMR.

Procedure name
PSLIST

EZA2231I The SOCKS server rejected the connection to ip_address with reply_field

Explanation
The FTP client attempted to connect to an FTP server. The client is configured to access the FTP server using a SOCKS server. The SOCKS server will not allow the client to connect to the requested FTP server.

ip_address is the IP address of the requested FTP server.

reply_field is a decimal value describing why the SOCKS server rejected the connect request. When SOCKS V4 protocols are in use, the value is the CD field, or result code, from the CONNECT reply as defined in the document SOCKS: A protocol for TCP proxy across firewalls by Ying-Da Lee. The following excerpt is from that document listing the possible return codes and explanations.

91 The request rejected or failed.
92 The request rejected because SOCKS server cannot connect to identd on the client.
93 The request rejected because the client program and identd report different user IDs.

When SOCKS V5 protocols are in use, the value is the REP field, or reply value, from the CONNECT reply as defined in RFC 1928. See Appendix B, “Related protocol specifications,” on page 1247 for information about accessing RFCs.

System action
FTP stops trying to connect to the indicated IP address through the SOCKS server.

Operator response
Contact the system programmer with the error message.

System programmer response
You can obtain more detailed information about why the SOCKS server rejected the connection by using the FTP client debug and dump subcommands to activate tracing, and attempting the connection again.

SOCKS V4 or SOCKS V5 protocols are specified in the file or data set indicated by the SOCKSCONFIGFILE statement in FTP.DATA.

For the SOCKS V5 protocol, the reply value is one of the following:

2 The SOCKS server is configured to reject attempts to connect to the FTP server. Follow the procedure for SOCKS V4 protocol and CD field 91.
**all other reply values**
Contact the administrator of the SOCKS server with the error.

For the SOCKS V4 protocol, the CD field is one of the following:

91
A probable cause is that the SOCKS server is configured to reject attempts to connect to the FTP server. If you want to allow the FTP client to connect to the target FTP server, either ask the administrator of the configured SOCKS server to allow connections to the FTP server, or change the FTP client SOCKS configuration. You can configure the client to use a different SOCKS server, or you can configure the client to connect to the FTP server without using a SOCKS server.

92, 93
The SOCKS server requires inetd authentication but inetd authentication is not supported by the FTP client. Change the FTP client SOCKS configuration to use a SOCKS server that does not require identd authentication, or ask the administrator of the SOCKS server to allow the connection without identd authentication.

See the z/OS Communications Server: IP Configuration Guide and the z/OS Communications Server: IP Configuration Reference for information about configuring the FTP client to use SOCKS servers.

**Module**
ezaftpsc

**Procedure name**
connectV4(), connectV5().

---

**EZA2232I  SOCKS server rejected authentication method method**

**Explanation**
The FTP client tried to connect to an FTP server via a SOCKS server using SOCKS V5 protocols. The SOCKS server rejected the authentication method requested by the client.

*method* is a hexadecimal value representing the authentication method requested by the FTP client. The values for *method* are defined in RFC 1928. A value of zero signifies NO AUTHENTICATION REQUIRED. See Appendix B, “Related protocol specifications,” on page 1247 for information about accessing RFCs.

**System action**
The FTP client stops trying to connect to the FTP server through the SOCKS server.

**Operator response**
Contact the system programmer with the error message.

**System programmer response**
The probable explanation for the rejection is that the SOCKS server does not allow the requested authentication method.

If you want to allow the FTP client to connect to the target FTP server, either ask the administrator of the configured SOCKS server to allow the requested authentication method, or change the FTP client SOCKS configuration. You can configure the client to use a different SOCKS server, or you can configure the client to connect to the FTP server without using a SOCKS server. See the z/OS Communications Server: IP Configuration Guide and the z/OS Communications Server: IP Configuration Reference for information about configuring the FTP client to use SOCKS servers.

**Module**
ezaftpsc
The SOCKS server rejected the BIND to *ip_address* with reply *field*

**Explanation**

The FTP client tried to establish a data connection to the FTP server through a SOCKS server. The SOCKS server rejected a SOCKS BIND request from the client.

*ip_address* is the address of the FTP server

*reply_field* is a decimal value describing why the SOCKS server rejected the BIND request. When SOCKS V4 protocols are in use, the value is the CD field, or result code, from the BIND reply as defined in the document *SOCKS: A protocol for TCP proxy across firewall* by Ying-Da Lee. The following excerpt is from that document listing the possible return codes and explanations.

91  The request rejected or failed.
92  The request rejected because SOCKS server cannot connect to identd on the client.
93  The request rejected because the client program and identd report different user IDs.

When SOCKS V5 protocols are in use, the value is the REP field, or reply value, from the BIND reply as defined in RFC 1928. See Appendix B, “Related protocol specifications,” on page 1247 for information about accessing RFCs.

**System action**

FTP stops trying to access the FTP server through the SOCKS server.

**Operator response**

Contact the system programmer with the error.

**System programmer response**

You can get more information about why the SOCKS server rejected the BIND request by using the dump and debug subcommands while attempting the connection. See the z/OS Communications Server: IP User's Guide and Commands for information about the dump and debug subcommands.

SOCKS V4 or SOCKS V5 protocols are specified in the file or data set indicated by the SOCKSCONFIGFILE statement in FTP.DATA.

For the SOCKS V5 protocol, the reply value is one of the following:

2  The SOCKS server has been configured to reject connections to the target IP address. Follow the procedure for SOCKS V4 protocol and CD field 91.

**all other reply values**

Contact the administrator of the SOCKS server with the error.

For the SOCKS V4 protocol, the CD field is one of the following:

91  A possible explanation is that the SOCKS server is configured to reject connections to the target IP address. If you want to allow the FTP client to connect to the target FTP server, either ask the administrator of the configured SOCKS server to allow connections to the FTP server, or change the FTP client SOCKS configuration. You can configure the client to use a different SOCKS server, or you can configure the client to connect to the FTP server without using a SOCKS server. It is also possible that a general SOCKS server failure occurred. Contact the administrator of the SOCKS server with the error.
The SOCKS server requires inetd authentication but inetd authentication is not supported by the FTP client. Change the FTP client SOCKS configuration to use a SOCKS server that does not require identd authentication, or ask the administrator of the SOCKS server to allow the connection without identd authentication.

See the z/OS Communications Server: IP Configuration Guide and the z/OS Communications Server: IP Configuration Reference for information about configuring the FTP client to use SOCKS servers.

Module
ezaftpsc

Procedure name
bindV4(), bindV5()

EZA2243I Partitioned data set may not be created within a partitioned data set.

Explanation
A partitioned data set (PDS) cannot be created within an existing partitioned data set. To create a PDS on the local host, the LMKDIR subcommand is used. A PDS is created with either the fully qualified name or FTP appends the current working directory as the first part of the name.

System action
FTP continues.

Operator response
Enter the command with the correct syntax and try it again. See the z/OS Communications Server: IP User's Guide and Commands for more information.

System programmer response
No action is needed.

Module
EZAFTPCD

EZA2244I Data set name already exists.

Explanation
The data set name specified in the directory parameter of the MKDIR subcommand already exists.

System action
FTP continues.

Operator response
Check for the correct directory name to be created. See the z/OS Communications Server: IP User's Guide and Commands for more information.

System programmer response
No action is needed.
Module
EZAFTPCD

EZA2245I  data set name created.

Explanation
The data set name specified in the LMKDIR subcommand has been created. The LMKDIR creates a partitioned data set (PDS) on the local host.

System action
FTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
EZAFTPCD

EZA2247I  Volume number is not mounted and NoAutoMount specified.

Explanation
The data set name specified in the LMKDIR subcommand is in a volume that is not mounted. NOAUTOmount has been specified in the SITE or LOCSITE subcommand. The NOAUTOMount parameter prevents automatic mounting of data sets on volumes that are not mounted.

System action
FTP continues.

Operator response
Specify AUTOMount in the SITE and LOCSITE subcommand to permit automatic mounting of data sets on volumes that are not mounted. See the z/OS Communications Server: IP User's Guide and Commands for more information.

System programmer response
No action is needed.

Module
EZAFTPCD

EZA2250I  data set name is a VSAM data set. DCBDsn parameter ignored.

Explanation
The DCBDsn parameter specifies the name of the data set to be used as a model for allocation of new data sets. The name specified in DCBDsn is a Virtual Storage Access Method (VSAM) data set.
System action
FTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
EZAFTPDC, EZAFTPGU

EZA2251I  data set name is not a valid file. DCBDsn parameter ignored.

Explanation
The data set name specified in the DCBDsn parameter is incorrect. The DCBDsn parameter specifies the name of the data set to be used as a model for allocation of new data sets. The parameter is ignored.

System action
FTP continues.

Operator response
Check for the correct data set name and try the command again. See the z/OS Communications Server: IP User's Guide and Commands for more information.

System programmer response
No action is needed.

EZA2252I  data set name does not exist. DCBDsn parameter ignored.

Explanation
The data set name specified in the DCBDsn parameter was not found. The DCBDsn parameter specifies the name of the data set to be used as a model for allocation of new data sets. The parameter is ignored.

System action
FTP continues.

Operator response
Check for the correct data set name and reissue the command. See the z/OS Communications Server: IP User's Guide and Commands for more information.

System programmer response
No action is needed.

Module
EZAFTPDC, EZAFTPGU

EZA2253I  Error recalling data set name. DCBDsn parameter ignored.
**Explanation**
The File Transfer Protocol (FTP) was unsuccessful in accessing the data set name specified in the DCBDsn parameter. The DCBDsn parameter specifies the name of the data set to be used as a model for allocation of new data sets. The parameter is ignored.

**System action**
FTP continues.

**Operator response**
Check for the correct data set name and issue the DCBDsn parameter again. See the z/OS Communications Server: IP User’s Guide and Commands for more information.

**System programmer response**
No action is needed.

**Module**
EZAFTPCD, EZAFTPGU

**EZA2254I** data set name is migrated data set and Noautorecall is specified.

**Explanation**
The data set name specified in the DCBDsn parameter is a migrated data set. A migrated data set is a data set that has been moved from one hierarchy of storage to another. The DCBDsn parameter specifies the name of the data set to be used as a model for allocation of new data sets. The parameter is ignored.

**System action**
FTP continues.

**Operator response**
Check for the correct data set name and issue the command again. See the z/OS Communications Server: IP User's Guide and Commands for more information.

**System programmer response**
No action is needed.

**Module**
EZAFTPGU

**EZA2255I** Error mounting volume for data set name. DCBDsn parameter ignored.

**Explanation**
The File Transfer Protocol (FTP) was unsuccessful in mounting the volume where the data set name specified in the DCBDsn parameter is located. The DCBDsn parameter specifies the name of the data set to be used as a model for allocation of new data sets. The parameter is ignored.

**System action**
FTP continues.
Operator response
Check for the correct volume serial number in the VOLume parameter of the SITE and LOCSITE subcommand, correct the data set name, and issue the command again. See the z/OS Communications Server: IP User's Guide and Commands for more information.

System programmer response
No action is needed.

Module
EZAFTPCD, EZAFTPGU

EZA2256I  data set name is on a direct access volume that is not mounted and Noautomount is specified.

Explanation
The data set name specified in the DCBDsn parameter is located on a volume that has not been mounted. Noautomount has been specified. The NOAUTOMount parameter prevents automatic mounting of data sets on volumes that are not mounted. The DCBDsn parameter specifies the name of the data set to be used as a model for allocation of new data sets. The parameter is ignored.

System action
FTP continues.

Operator response
Specify AUTOMount in the SITE and LOCSITE subcommands to permit automatic mounting of data sets on volumes that are not mounted. See the z/OS Communications Server: IP User's Guide and Commands for more information.

System programmer response
No action is needed.

Module
EZAFTPCD, EZAFTPGU

EZA2257I  data set name is not on a direct access volume. DCBDsn parameter ignored.

Explanation
The data set name specified in the DCBDsn parameter is not located on a direct access volume. The DCBDsn parameter specifies the name of the data set to be used as a model for allocation of new data sets. The parameter is ignored.

System action
FTP continues.

Operator response
Check for the correct volume serial number in the VOLume parameter of the SITE and LOCSITE subcommand, correct the data set name, and issue the command again. See the z/OS Communications Server: IP User's Guide and Commands for more information.

System programmer response
No action is needed.
Module
EZAFTPCD, EZAFTPGU

EZA2258I Error locating file data set name. DCBDsn parameter ignored.

Explanation
The File Transfer Protocol (FTP) was unsuccessful in locating the data set name specified in the DCBDsn parameter. The DCBDsn parameter specifies the name of the data set to be used as a model for allocation of new data sets. The parameter is ignored.

System action
FTP continues.

Operator response
Check for correct command syntax and data set name and issue the command again. See the z/OS Communications Server: IP User's Guide and Commands for more information.

System programmer response
No action is needed.

Module
EZAFTPCD, EZAFTPGU

EZA2269I Lrecl=X Recfm=VBS BLKSIZE=size

Explanation
The record format and block size of a data set specified in the RECfm=format and BLocksize=nnn parameters of the SITE and LOCSITE subcommands. VBS indicates variable record length and blocked and spanned records. See the z/OS Communications Server: IP User's Guide and Commands for more information.

System action
FTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

EZA2270I Lrecl=X Recfm=VS BLKSIZE=size

Explanation
The record format and block size of a data set specified in the RECfm=format and BLocksize=nnn parameters of the SITE and LOCSITE subcommands. VS indicates variable record length and spanned records. See the z/OS Communications Server: IP User's Guide and Commands for more information.

System action
FTP continues.
EZA2279W  BLOCKSIZE and LRecl must be equal for recfm data sets. BLOCKSIZE set to value.

Explanation
The LOCSITE subcommand was entered with one or more of the LRecl, RECFm, and BLOCKSIZE parameters, and the resulting parameter values caused a mismatch between the LRecl, RECFm, and BLOCKSIZE parameters. The Record Format, recfm, requires that LRecl and BLOCKSIZE be equal, but the values for BLOCKSIZE and LRecl were not the same.

System action
The BLOCKSIZE parameter is set to value.

Operator response
If necessary, reissue the LOCSITE subcommand with a valid LRecl, RECFm, and BLOCKSIZE combination. See the z/OS Communications Server: IP User's Guide and Commands or z/OS Communications Server: IP Configuration Guide for information on FTP in general and to z/OS Communications Server: IP User's Guide and Commands for information on the parameters of the LOCSITE subcommand.

System programmer response
No action is needed.

Module
EZAFTPCK

EZA2280W  BLOCKSIZE must be a multiple of LRecl for recfm data sets. BLOCKSIZE set to value.

Explanation
The LOCSITE subcommand was entered with one or more of the LRECL, RECFM, and BLKSIZE parameters, and the resulting parameter values caused a mismatch between the LRECL, RECFM, and BLKSIZE parameters. The Record Format, recfm, requires that BLOCKSIZE be a multiple of LREcl, but it was not.

System action
The BLOCKSIZE parameter is set to value.

Operator response
If necessary, reissue the LOCSITE subcommand with a valid LRecl, RECFm, and BLOCKSIZE combination. See the z/OS Communications Server: IP User's Guide and Commands or z/OS Communications Server: IP Configuration Guide for information on FTP in general and to z/OS Communications Server: IP User's Guide and Commands for information on the parameters of the LOCSITE subcommand.

System programmer response
No action is needed.

Module
EZAFTPCK
EZA2281W  BLOCKSIze must be four larger than LRecl for recfm data sets. LRecl set to value.

Explanation
The LOCSITE subcommand was entered with one or more of the LRecl, RECFm, and BLOCKSIze parameters, and the resulting parameter values caused a mismatch between the LRecl, RECFm, and BLOCKSIze parameters. The Record Format, recfm, requires that BLOCKSIze be at least 4 more than LRecl, but the value specified for LRecl would not allow BLOCKSIze to be four more than LRecl and still be within its valid range of values.

System action
The LRecl parameter is set to value.

Operator response
If necessary, reissue the LOCSITE subcommand with a valid LRecl, RECFm, and BLOCKSIze combination. See the z/OS Communications Server: IP User's Guide and Commands or z/OS Communications Server: IP Configuration Guide for information on FTP in general and to z/OS Communications Server: IP User's Guide and Commands for information on the parameters of the LOCSITE subcommand.

System programmer response
No action is needed.

Module
EZAFTPCK

EZA2282W  BLOCKSIze must be four larger than LRecl for recfm data sets. LRecl set to value. BLOCKSIze set to value.

Explanation
The LOCSITE subcommand was entered with one or more of the LRecl, RECFm, and BLOCKSIze parameters, and the resulting parameter values caused a mismatch between the LRecl, RECFm, and BLOCKSIze parameters. The Record Format, recfm, requires that BLOCKSIze be at least four more than LRecl, but the value specified for LRecl would not allow BLOCKSIze to be four more than LRecl and still be within the valid range of values.

System action
The BLOCKSIze parameter is set to value.

Operator response
If necessary, reissue the LOCSITE subcommand with a valid LRecl, RECFm, and BLOCKSIze combination. See the z/OS Communications Server: IP User's Guide and Commands or z/OS Communications Server: IP Configuration Guide for information on FTP in general and to z/OS Communications Server: IP User's Guide and Commands for information on the parameters of the LOCSITE subcommand.

System programmer response
No action is needed.

Module
EZAFTPCK

EZA2283W  BLOCKSIze must be four larger than LRecl for recfm data sets. LRecl set to value. BLOCKSIze set to value.
Explanation

The LOCSITE subcommand was entered with one or more of the LRecl, RECFm, and BLOCKSze parameters, and
the resulting parameter values caused a mismatch between the LRecl, RECFm, and BLOCKSze parameters. The
Record Format, recfm, requires that BLOCKSze be at least 4 more than LRECL, but the value of BLOCKSze did
not meet this criteria.

System action

The BLOCKSze parameter is set to value.

Operator response

If necessary, reissue the LOCSITE subcommand with a valid LRecl, RECFm, and BLOCKSze combination. See the
z/OS Communications Server: IP User's Guide and Commands or z/OS Communications Server: IP Configuration
Guide for information on FTP in general and to z/OS Communications Server: IP User’s Guide and Commands for
information on the parameters of the LOCSITE subcommand.

System programmer response

No action is needed.

Module

EZAFTPCK

EZA2284I  value

Explanation

The value of the output buffer. This buffer contains characters in ASCII form that are being read from the File
Transfer Protocol (FTP) connection.

System action

FTP continues.

Operator response

No action is needed.

System programmer response

No action is needed.

EZA2294I  Proxy connected through SOCKS server at IP_address

Explanation

The user issued a LOCStat FTP subcommand to display client status. The client has a proxy session established
with an FTP server through a SOCKS server.

For a connection through a SOCKS server, the FTP client always connects to port 1080 of the SOCKS server’s
IP_address instead of connecting to the IP address and port number of the FTP server; the SOCKS server relays
data between the FTP client and the FTP server. The IP address and port number of the FTP proxy server are
also displayed by the LOCStat subcommand.

IP_address is the IP address of the SOCKS server.

System action

Processing continues.
Operator response
No action is needed.

System programmer response
No action is needed.

Module
ezaftpcl

Procedure name
locstat()

EZA2295I  Partitioned data sets will be created in extended format

Explanation
This message is issued when a valid value has been specified and the PDSTYPE is PDSE. The PDSTYPE statement in FTP.DATA, and the PDSTYPE parameter of the LOCSIte subcommand, are described in z/OS Communications Server: IP User’s Guide and Commands.

System action
Processing continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
EZAFTPCK

Procedure name
locstat()

EZA2300I  Command ended because the CPU time limit was exceeded

Explanation
The FTP client was processing a command when the process was stopped either by the z/OS UNIX shell command kill -s SIGXCPU or because the CPU time limit (MAXCPUTIME in BPXPRMxx or CPUTIMEMAX in the user OMVS segment) was exceeded.

System action
The FTP client ends.

Operator response
Contact the system programmer.
System programmer response
If the process was stopped because the CPU time limit was exceeded, check the MAXCPUTIME statement in the BPXPRMnn member or the CPUTIMEMAX statement in the OMVS segment of the user. See the information about the MAXCPUTIME statement in z/OS UNIX System Services Planning and BPXPRMxx member in z/OS MVS Initialization and Tuning Reference.

Module
EZAFTPCX

Procedure name
pgmxcpuc

EZA2301E Cannot open FTP.DATA specified by the -f parameter filename

Explanation
The FTP client was started with the -f filename parameter on the FTP command. FTP tried to open that file or data set but could not.

In the message text:

filename
The name of the FTP.DATA file or data set.

System action
The FTP client exits.

Operator response
No action is needed.

System programmer response
No action is needed.

User response
Specify a valid file or data set name and start the FTP client.

Problem determination
Not applicable.

Source
z/OS Communications Server TCP/IP: FTP

Module
EZAFTPCY

Routing code
1

Descriptor code
2
Example

EZA2301E Cannot open FTP.DATA specified by -f parameter /u/user79/not.there

EZA2320I temp is a migrated data set and Noautorecall is specified.

Explanation
The named file was sent with AUTORECALL set to false. This prevents automatic recall of the migrated Hierarchical Storage Manager (HSM) data sets.

System action
FTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
EZAFTPCG, EZAFTPCP

EZA2321I Error recalling temp (rc=value)

Explanation
The file displayed cannot be recalled.

System action
FTP rejects the current subcommand. Processing continues.

Operator response
Reissue the command. If the problem persists, contact the system programmer.

System programmer response
Additional messages might be issued by your hierarchical storage manager (HSM) product. See the documentation for that product to interpret those messages.

Module
EZAFTPCG, EZAFTPCP

EZA2322I temp is on a direct access volume that is not mounted and Noautomount is specified.

Explanation
The value for the FTP AUTOMOUNT parameter is set to NOAUTOMOUNT, preventing automatic mounting of volumes. The data set temp is on a volume that has not been mounted.

System action
FTP rejects the current subcommand. Processing continues.
**Operator response**

If possible, issue the **LOCSIte** subcommand to change the automount setting. Otherwise, ask the system programmer to mount the volume containing *name*. Issue the subcommand again. See *z/OS Communications Server: IP User's Guide and Commands* for information about the **LOCSIte** subcommand.

**System programmer response**

No action is needed.

**Module**

EZAFTPCG, EZAFTPCP

---

**EZA2323I  Error mounting volume for temp**

**Explanation**

FTP is unable to mount the volume for the data set *temp*.

**System action**

FTP rejects the current subcommand. Processing continues.

**Operator response**

Issue the subcommand again. If the problem persists, contact the system programmer with the error.

**System programmer response**

Determine why the requested volume cannot be mounted to the MVS system.

**Module**

EZAFTPCD, EZAFTPCG, EZAFTPCP

---

**EZA2326I  Error allocating data set name**

**Explanation**

The data set name displayed is not valid.

**System action**

FTP continues.

**Operator response**

Check the DGBPDSN statement in the *hlq.*FTP.DATA data set and verify that the data set name is correct. For more information on the DSBDSN, see the *z/OS Communications Server: IP User's Guide and Commands*.

**System programmer response**

FTP continues.

**Module**

EZAFTPCD

---

**EZA2329I  No files match the pattern name**
Explanation
There are no files or data sets that match the pattern.

System action
FTP continues.

Operator response
Try the command again with the correct pattern.

System programmer response
No action is needed.

Module
EZAFTPMR

**EZA2331I**  “name” contains an asterisk (“*”) but it is not the last character.

Explanation
The data set name is not valid.

System action
FTP continues.

Operator response
Check the z/OS Communications Server: IP User's Guide and Commands for information on naming requirements of data sets. Try the command again with the correct name.

System programmer response
No action is needed.

**EZA2332I**  Patterns (“%” and “*”) may only be specified in the last qualifier when in directory mode.

Explanation
DIRECTORYMODE specifies that only the data set qualifier immediately below the current directory is treated as an entry in the directory. Since you are not in DIRECTORYMODE, pattern matching cannot be used.

System action
FTP continues.

Operator response
If you would like to use pattern matching, switch to DIRECTORYMODE. Check the z/OS Communications Server: IP User's Guide and Commands for information on setting FTP parameters.

System programmer response
No action is needed.

**EZA2333I**  ** must be preceded and followed by a period or blank
Explanation
The LIST (DIR) or NLST (LS) command was entered with the ** global file-name character in the pathname, but the ** was either not preceded by or not followed by a period (.) or blank. The ** character is used to replace zero or more complete qualifiers in the name.

System action
FTP continues.

Operator response
See the z/OS Communications Server: IP User's Guide and Commands for the rules for using special characters in LIST and NLST commands.

System programmer response
No action is needed.

EZA2337I temp is not a valid file.

Explanation
The file displayed is not valid.

System action
FTP continues.

Operator response
Reissue the command with a valid file name.

System programmer response
No action is needed.

Module
EZAFTPCG, EZAFTPCP

EZA2338I temp is not a partitioned data set.

Explanation
The name displayed is not a partitioned data set.

System action
FTP continues.

Operator response
Reissue the command with the correct data set name. For more information on partitioned and sequential data sets, check the z/OS Communications Server: IP User's Guide and Commands.

System programmer response
No action is needed.
Module
EZAFTPCG, EZAFTPCP

EZA2339I  temp is a non–existent partitioned data set. Use LMKDIR to create it.

Explanation
The data set name displayed does not exist. Create the data set using LMKDIR.

System action
FTP continues.

Operator response
To create a partitioned data set, type LMKDIR followed by the data set name. Naming requirements for a PDS are as follows:

• No part of the name can start with a number.
• No part of the name can be more than 8 characters in length.
• Each part of the name is separated by a period.
• If single quotation marks are not used when specifying the PDS name, FTP appends the current working directory as the first part of the name.

For more information on naming conventions for partitioned data sets, see the z/OS Communications Server: IP User's Guide and Commands.

System programmer response
FTP continues.

Module
EZAFTPCG

EZA2340I  temp is a VSAM data set. VSAM is not supported.

Explanation
The data set name displayed is a Virtual Storage Access Method (VSAM) data set. VSAM data sets are not supported by TCP/IP.

System action
FTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
EZAFTPCG, EZAFTPCP

EZA2358W  Unrecognized option 'parameter=operand' on locsite command.
**Explanation**
The LOCSITE subcommand was entered with the option `parameter`, but `parameter` was not a valid LOCSITE subcommand parameter.

**System action**
The parameter is ignored. FTP continues.

**Operator response**
Reissue the LOCSITE subcommand with a valid parameter. See the z/OS Communications Server: IP User's Guide and Commands or z/OS Communications Server: IP Configuration Guide for information on FTP in general and to z/OS Communications Server: IP User’s Guide and Commands for information on the parameters of the LOCSITE subcommand.

**System programmer response**
No action is needed.

**Module**
EZAFTPCK

**EZA2359W**  **Operand required on `parm` option. Option ignored.**

**Explanation**
The option `parm` appeared on a LOCSITE subcommand without an operand. The option is ignored.

**System action**
FTP continues.

**Operator response**
If wanted, reissue the LOCSITE command with an operand for the `parm` option. See the z/OS Communications Server: IP User's Guide and Commands or z/OS Communications Server: IP Configuration Guide for information on FTP in general and to z/OS Communications Server: IP User’s Guide and Commands for information on the parameters of the LOCSITE subcommand.

**System programmer response**
No action is needed.

**Module**
EZAFTPCK

**EZA2360W**  **Operand not allowed on `parm` option. Option ignored.**

**Explanation**
The parameter `parm` appeared on a LOCSITE subcommand in incorrect format. No operand is allowed for this parameter. The parameter is ignored.

**System action**
FTP continues.
Operator response
If wanted, reissue the LOCSITE command without an operand on the \textit{parm} parameter. See the \textit{z/OS Communications Server: IP User's Guide and Commands} or \textit{z/OS Communications Server: IP Configuration Guide} for information on FTP in general and to \textit{z/OS Communications Server: IP User's Guide and Commands} for information on the parameters of the LOCSITE subcommand.

System programmer response
No action is needed.

Module
EZAFTPCK

\textbf{EZA2370W} DCbdsn already specified. \textit{"parameter=value"} ignored.

Explanation
DCbdsn parameter was already specified on the LOCSITE command. This parameter can only be issued once per LOCSITE command. All occurrences of the parameter after the first occurrence are ignored.

System action
\textit{parameter} is set to the value specified the first time the parameter was encountered. The \textit{value} specified for this occurrence of \textit{parameter} is ignored.

Operator response
If you want to change the parameter value to the value specified by \textit{parameter=value}, reissue the LOCSITE command with \textit{parameter=value} as the only occurrence of the parameter on the LOCSITE command.

System programmer response
No action is needed.

Module
EZAFTPCK

\textbf{EZA2372W} LRecl parameter already specified. \textit{"parameter=value"} ignored.

Explanation
LRecl parameter was already specified on the LOCSITE command. This parameter can only be issued once per LOCSITE command. All occurrences of the parameter after the first occurrence are ignored.

System action
\textit{parameter} is set to the value specified the first time the parameter was encountered. The \textit{value} specified for this occurrence of \textit{parameter} is ignored.

Operator response
If you want to change the parameter value to the value specified by \textit{parameter=value}, reissue the LOCSITE command with \textit{parameter=value} as the only occurrence of the parameter on the LOCSITE command.

System programmer response
No action is needed.
Module
EZAFTPCK

EZA2373W  LRecl parameter (value) is not numeric.

Explanation
The LOCSITE command was specified with the LRecl parameter, but the value, value, specified for the LRecl parameter was not a numeric value.

System action
The LRecl parameter is ignored.

Operator response
Reissue the command with a valid value. See the z/OS Communications Server: IP User's Guide and Commands or z/OS Communications Server: IP Configuration Guide for information on FTP in general and to z/OS Communications Server: IP User's Guide and Commands for information on the parameters of the LOCSITE subcommand.

System programmer response
No action is needed.

Module
EZAFTPCK

EZA2374W  PRImary parameter already specified. “parameter=value” ignored.

Explanation
PRImary parameter was already specified on the LOCSITE command. This parameter can only be issued once per LOCSITE command. All occurrences of the parameter after the first occurrence are ignored.

System action
parameter is set to the value specified the first time the parameter was encountered. The value specified for this occurrence of parameter is ignored.

Operator response
If you want to change the parameter value to the value specified by parameter=value, reissue the LOCSITE command with parameter=value as the only occurrence of the parameter on the LOCSITE command.

System programmer response
No action is needed.

Module
EZAFTPCK

EZA2375W  PRImary parameter (value) is not numeric.

Explanation
The LOCSITE command was specified with the PRImary parameter, but the value, value, specified for the PRImary parameter was not a numeric value.
**System action**  
The PR1mary parameter is ignored.

**Operator response**  
Reissue the command with a valid value. See the z/OS Communications Server: IP User's Guide and Commands or z/OS Communications Server: IP Configuration Guide for information on FTP in general and to z/OS Communications Server: IP User's Guide and Commands for information on the parameters of the LOCSITE subcommand.

**System programmer response**  
No action is needed.

**Module**  
EZAFTPCK

**EZA2376W**  
SECondary parameter already specified. 'parameter=value' ignored.

**Explanation**  
SECondary parameter was already specified on the LOCSITE command. This parameter can only be issued once per LOCSITE command. All occurrences of the parameter after the first occurrence are ignored.

**System action**  
*parameter* is set to the value specified the first time the parameter was encountered. The *value* specified for this occurrence of *parameter* is ignored.

**Operator response**  
If you want to change the parameter value to the value specified by *parameter=value*, reissue the LOCSITE command with *parameter=value* as the only occurrence of the parameter on the LOCSITE command.

**System programmer response**  
No action is needed.

**Module**  
EZAFTPCK

**EZA2377W**  
SECondary parameter (value) is not numeric.

**Explanation**  
The LOCSITE command was specified with the SECondary parameter, but the value, *value*, specified for the SECondary parameter was not a numeric value.

**System action**  
The SECondary parameter is ignored.

**Operator response**  
Reissue the command with a valid value. See the z/OS Communications Server: IP User's Guide and Commands or z/OS Communications Server: IP Configuration Guide for information on FTP in general and to z/OS Communications Server: IP User's Guide and Commands for information on the parameters of the LOCSITE subcommand.
**System programmer response**
No action is needed.

**Module**
EZAFTPCK

**EZA2378W**  VOLume parameter already specified. "parameter=value" ignored.

**Explanation**
VOLume parameter was already specified on the LOCSITE command. This parameter can only be issued once per LOCSITE command. All occurrences of the parameter after the first occurrence are ignored.

**System action**
parameter is set to the value specified the first time the parameter was encountered. The value specified for this occurrence of parameter is ignored.

**Operator response**
If you want to change the parameter value to the value specified by parameter=value, reissue the LOCSITE command with parameter=value as the only occurrence of the parameter on the LOCSITE command.

**System programmer response**
No action is needed.

**Module**
EZAFTPCK

**EZA2379W**  value is not a valid VOLume parameter.

**Explanation**
The LOCSITE command was specified with the VOLume parameter, but the value, value, specified for the VOLume parameter was not a valid value. The parameter may not be more than 6 characters.

**System action**
The VOLume parameter is ignored.

**Operator response**
Reissue the command with a valid value. See the z/OS Communications Server: IP User's Guide and Commands or z/OS Communications Server: IP Configuration Guide for information on FTP in general and to z/OS Communications Server: IP User’s Guide and Commands for information on the parameters of the LOCSITE subcommand.

**System programmer response**
No action is needed.

**Module**
EZAFTPCK

**EZA2380W**  RECFm parameter already specified. "parameter=value" ignored.
Explanation
RECFm parameter was already specified on the LOCSITE command. This parameter can only be issued once per LOCSITE command. All occurrences of the parameter after the first occurrence are ignored.

System action
parameter is set to the value specified the first time the parameter was encountered. The value specified for this occurrence of parameter is ignored.

Operator response
If you want to change the parameter value to the value specified by parameter=value, reissue the LOCSITE command with parameter=value as the only occurrence of the parameter on the LOCSITE command.

System programmer response
No action is needed.

Module
EZAFTPCK

EZA2381W RECFm parameter (value) is not valid.

Explanation
The LOCSITE command was specified with the RECFm parameter, but value, specified for the RECFm parameter, was not a valid value.

System action
The RECFm parameter is ignored.

Operator response
Reissue the command with a valid value. See the z/OS Communications Server: IP User's Guide and Commands or z/OS Communications Server: IP Configuration Guide for information on FTP in general and to z/OS Communications Server: IP User’s Guide and Commands for information on the parameters of the LOCSITE subcommand.

System programmer response
No action is needed.

Module
EZAFTPCK

EZA2383W BLOCKSize parameter already specified. "parameter=value" ignored.

Explanation
BLOCKSize parameter was already specified on the LOCSITE command. This parameter can only be issued once per LOCSITE command. All occurrences of the parameter after the first occurrence are ignored.

System action
parameter is set to the value specified the first time the parameter was encountered. The value specified for this occurrence of parameter is ignored.
Operator response
If you want to change the parameter value to the value specified by parameter=value, reissue the LOCSITE command with parameter=value as the only occurrence of the parameter on the LOCSITE command.

System programmer response
No action is needed.

Module
EZAFTPCK

EZA2384W  BLOCKSIZe parameter (value) is not numeric.

Explanation
The LOCSITE command was specified with the BLOCKSIZe parameter, but the value, value, specified for the BLOCKSIZe parameter was not a numeric value.

System action
The SECondary parameter is ignored.

Operator response
Reissue the command with a valid value. See the z/OS Communications Server: IP User's Guide and Commands or z/OS Communications Server: IP Configuration Guide for information on FTP in general and to z/OS Communications Server: IP User's Guide and Commands for information on the parameters of the LOCSITE subcommand.

System programmer response
No action is needed.

Module
EZAFTPCK

EZA2385W  DIRectory parameter already specified. "parameter=value" ignored.

Explanation
DIRectory parameter was already specified on the LOCSITE command. This parameter can only be issued once per LOCSITE command. All occurrences of the parameter after the first occurrence are ignored.

System action
parameter is set to the value specified the first time the parameter was encountered. The value specified for this occurrence of parameter is ignored.

Operator response
If you want to change the parameter value to the value specified by parameter=value, reissue the LOCSITE command with parameter=value as the only occurrence of the parameter on the LOCSITE command.

System programmer response
No action is needed.
Module
EZAFTPCK

EZA2386W Directory parameter (value) is not numeric.

Explanation
The LOCSITE command was specified with the DIRECTORY parameter, but the value, value, specified for the DIRECTORY parameter was not a numeric value.

System action
The DIRECTORY parameter is ignored.

Operator response
Reissue the command with a valid value. See the z/OS Communications Server: IP User's Guide and Commands or z/OS Communications Server: IP Configuration Guide for information on FTP in general and to z/OS Communications Server: IP User's Guide and Commands for information on the parameters of the LOCSITE subcommand.

System programmer response
No action is needed.

Module
EZAFTPCK

EZA2388W value is not a valid Qdisk parameter.

Explanation
The LOCSITE command was specified with the Qdisk parameter, but the value, value, specified for the Qdisk parameter was not a valid value. The parameter may not be more than 6 characters.

System action
The Qdisk parameter is ignored.

Operator response
Reissue the command with a valid value. See the z/OS Communications Server: IP User's Guide and Commands or z/OS Communications Server: IP Configuration Guide for information on FTP in general and to z/OS Communications Server: IP User's Guide and Commands for information on the parameters of the LOCSITE subcommand.

System programmer response
No action is needed.

Module
EZAFTPCK

EZA2394I Invalid format data set name “name”. DCBDSN parameter ignored.

Explanation
The data set name displayed is not valid, and therefore is ignored.
**System action**
FTP continues.

**Operator response**
The DCBDSN parameter specifies the name of the data set to be used as a model for allocation of new data sets. Reissue the command with the correct data set name. For more information on DCBDSN, see the z/OS Communications Server: IP User’s Guide and Commands.

**System programmer response**
No action is needed.

**Module**
EZAFTPCK, EZAFTPGU

**EZA2395W** LRecl must be between 0 and 32760. LRecl parameter ignored.

**Explanation**
The record size should be between 0 and 32760. The default is 256.

**System action**
FTP continues.

**Operator response**
Reissue the LOCSITE LRecl command with a record size between 0 and 32760.

**System programmer response**
No action is needed.

**Module**
EZAFTPCK

**EZA2396W** BLOCKSIze must be between 0 and 32760. BLOCKSIze parameter ignored.

**Explanation**
The block size of a data set should be between 0 and 32760. The default is 6233.

**System action**
FTP continues.

**Operator response**
Reissue the LOCSITE BLOCKSIze command with a block size between 0 and 32760.

**System programmer response**
No action is needed.

**Module**
EZAFTPCK

**EZA2397W** Unit parameter already specified. parameter ignored.
Explanation
The unit name specifying the unit type for allocation of data sets has already been set. The unit name displayed is ignored.

System action
FTP continues.

Operator response
To change the unit type, specify the unit name in the hlq.FTP.DATA data set. The unit name parameter can be used to specify either direct access or tape device types.

System programmer response
No action is needed.

Module
EZAFTPCK

EZA2398W  parameter is not a valid unit parameter.

Explanation
The unit parameter is not valid.

System action
FTP continues.

Operator response
Reissue the unit name command with the correct parameter.

System programmer response
FTP continues.

Module
EZAFTPCK

EZA2399W  FILEtype parameter already specified. “parameter=value” ignored.

Explanation
The LOCSITE subcommand was entered with the filetype parameter more than once. The file type displayed is ignored.

System action
FTP continues.

Operator response
Issue another LOCSITE subcommand to change the data set file type. Specify the filetype value you want to use on the filetype parameter. see the z/OS Communications Server: IP User's Guide and Commands for more information about the LOCSITE subcommand and the filetype parameter. The default file type is SEQ.
System programmer response
No action is needed.

Module
EZAFTPCK

EZA2400W  FileType parameter parameter is not valid.

Explanation
The file type displayed is not a valid file type for a data set.

System action
FTP continues.

Operator response
Reissue the FILETYPE command with a valid file type. The default is SEQ (sequential data set). See message EZA2399 for a list of valid file types.

System programmer response
No action is needed.

Module
EZAFTPCK, EZAFTPEP

EZA2403I  Using control connection address ipaddr for data connection

Explanation
The client sent a PASV command to the server to establish a data connection. By default, an FTP client connects to the IP address and port number specified in the PASV reply to complete the data connection. However, because PASSIVEIGNOREADDR is set to TRUE, the FTP client ignores the IP address in the PASV reply. The FTP client will connect to the port number specified in the PASV reply, at the IP address it used to log into the server, to complete the data connection.

In the message text:

ipaddr
  The IP address that the FTP client used when it logged in to the FTP server.

System action
The FTP client ignores the IP address in the PASV reply from the server and connects to the same address that it used to log in to the server.

Operator response
Not applicable.

System programmer response
Not applicable.

User response
No response is necessary if you intend for the FTP client to use the same IP address for the data connection that it used to log in to the FTP Server. If you want the client to use the IP address specified in the PASV reply,
configure PASSIVEIGNOREADDR FALSE by modifying the client FTP.DATA file, or by issuing the LOCSITE subcommand with the NOPASSIVEIGNOREADDR parameter.

See the information about the PASSIVEIGNOREADDR (FTP client) statement in z/OS Communications Server: IP Configuration Reference. See the information about the LOCSITE subcommand in z/OS Communications Server: IP User’s Guide and Commands.

**Problem determination**
Not applicable.

**Routing code**
*

**Descriptor code**
*

**Automation**
Not applicable for automation.

**Example**

Command:
put /etc/hosts
>>> PASV
227 Entering Passive Mode (129,42,17,103,19,136)
EZA2403I Using control connection address 9.155.11.97 for data connection
>>> STOR hosts
125 Storing data in the Null directory (*dev.null).
250 Transfer completed successfully.
41 bytes transferred in 0.005 seconds. Transfer rate 8.20 Kbytes/sec.
Command:

EZA2406W MGmtclass parameter already specified. “parameter=value” ignored.

**Explanation**
The MGmtclass parameter has already been specified. The parameter displayed is ignored.

**System action**
FTP continues.

**Operator response**
The Storage Management System (SMS) has been used to set certain defaults for the hlq.FTP.DATA data set. The defaults for space and RECFM are set by MGmtclass. The values for these parameters take precedence over any values you specify using the individual storage attributes parameter with the LOCSITE command or the hlq.FTP.DATA data class. To change any of the parameters, see your systems administrator.
EZA2407W  Mgmtclass parameter parameter is not valid.

Explanation
The Mgmtclass parameter displayed is not valid.

System action
FTP continues.

Operator response
The Storage Management System (SMS) has been used to set certain defaults for the hlq.FTP.DATA data set. The defaults for space and RECFM are set by Mgmtclass. The values for these parameters take precedence over any values you specify using the individual storage attributes parameter with the LOCSITE command or the hlq.FTP.DATA data class. To change any of the parameters, see your systems administrator.

System programmer response
No action is needed.

EZA2408W  STOrclass parameter already specified. “parameter=value” ignored.

Explanation
The STOrclass parameter has already been specified. The parameter displayed is ignored.

System action
FTP continues.

Operator response
The Storage Management System (SMS) has been used to set certain defaults for the hlq.FTP.DATA data set. The defaults for unit and DCBDSN are set by STOrclass. The values for these parameters take precedence over any values you specify using the individual storage attributes parameter with the LOCSITE command or the hlq.FTP.DATA data class. To change any of the parameters, see your systems administrator.

System programmer response
No action is needed.

Module
EZAFTPCK

EZA2409W  STORclass parameter (parameter) is not valid.

Explanation
The STORclass parameter displayed is not valid.
System action
FTP continues.

Operator response
The Storage Management System (SMS) has been used to set certain defaults for the hlq.FTP.DATA data set. The
defaults for unit and DCBDSN are set by STORclass. The values for these parameters take precedence over any
values you specify using the individual storage attributes parameter with the LOCSITE command or the
hlq.FTP.DATA data class. To change any of the parameters, see your systems administrator.

System programmer response
No action is needed.

EZA2410W  DATAClass parameter already specified. “parameter=value” ignored.

Explanation
The DATAClass parameter has already been specified. The parameter displayed is ignored.

System action
FTP continues.

Operator response
The Storage Management System (SMS) has been used to set certain defaults for the hlq.FTP.DATA data set. The
defaults for space, RECFM, BLKSIZE, and LRECL are set by DATACLASS. The values for these parameters take
precedence over any values you specify using the individual storage attributes parameter with the LOCSITE
command or the hlq.FTP.DATA data class. To change any of the parameters, see your systems administrator.

System programmer response
No action is needed.

Module
EZAFTPCK

EZA2411W  DATAClass parameter parameter is not valid.

Explanation
The DATAClass parameter displayed is not valid.

System action
FTP continues.

Operator response
The Storage Management System (SMS) has been used to set certain defaults for the hlq.FTP.DATA data set. The
defaults for space, RECFM, BLKSIZE, and LRECL are set by DATACLASS. The values for these parameters take
precedence over any values you specify using the individual storage attributes parameter with the LOCSITE
command or the hlq.FTP.DATA data class. To change any of the parameters, see your systems administrator.

System programmer response
No action is needed.

EZA2412W  NoRDW already specified. RDW ignored.
**Explanation**
RDW (record descriptor word) has been set to false and therefore, discarded during FTP transmission of VB (variable blocked) or VBS (variable blocked spanned) data sets in other than block mode.

**System action**
FTP continues.

**Operator response**
Set RDW to true in the hlq.FTP.DATA data set if you do not want the RDW to be discarded.

**System programmer response**
No action is needed.

**Module**
EZAFTPCK

**EZA2413W**  RDW already specified. NoRdw ignored.

**Explanation**
Setting RDW to true specifies that the record descriptor words are treated as if they were part of the record and not discarded during FTP transmission of VB (variable block) or VBS (variable blocked spanned) data sets in other than block mode. RDW information is stored in binary. Transfer files in binary mode to avoid translation problems that can occur if you transfer this binary field in EBCDIC or ASCII.

**System action**
FTP continues.

**Operator response**
To discard RDW during FTP transmission, set RDW to false in the hlq.FTP.DATA data set.

**System programmer response**
No action is needed.

**Module**
EZAFTPCK

**EZA2414W**  RETpd parameter already specified. “parameter=value” ignored.

**Explanation**
The RETpd parameter has already been set, therefore, the parameter displayed is ignored.

**System action**
FTP continues.

**Operator response**
The RETpd parameter for MVS specifies the number of days that a newly allocated data set should be retained. The maximum is 9999.
System programmer response
No action is needed.

Module
EZAFTPCK

EZA2415W RETpd parameter (value) is not valid.

Explanation
The RETpd parameter displayed is not valid.

System action
FTP continues.

Operator response
The RETpd parameter for MVS specifies the number of days that a newly allocated data set should be retained. The maximum is 9999. Reissue the parameter with a valid numeric.

System programmer response
No action is needed.

Module
EZAFTPCK

EZA2416W DB2 parameter (db2name) is more than 4 characters.

Explanation
The db2name specified for the DB2 parameter on an FTP LOCSITE command is too long.

System action
The DB2 parameter is ignored. FTP continues.

Operator response
Correct the name of the Db2 subsystem, and issued the LOCSITE command again.

System programmer response
None

Module
EZAFTPCK

EZA2417W READTAPEFormat value is not supported - READTAPEFormat ignored

Explanation
The value specified for the READTAPEFormat parameter on a LOCSITE command is not supported. Valid values are F (for Fixed), V (for Variable), S (for Spanned), X (for Lrecl X), or blank (unspecified).

System action
The READTAPEFormat parameter is ignored. FTP continues.
Operator response
Change value to one of the supported formats.

System programmer response
No action is needed.

Module
EZAFTPCK

Procedure name
locsite

EZA2421W  NORESTGet already specified. RESTGet ignored.

Explanation
NORESTGet cmd was followed by a RESTGet cmd within the same LOCSITE request.

System action
FTP continues.

Operator response
If the setting is not what you want, reissue the LOCSITE command with the correct values.

System programmer response
No action is needed.

Module
EZAFTPCK

EZA2422W  RESTGet already specified. NORESTGet ignored.

Explanation
RESTGet cmd was followed by a NORESTGet cmd within the same LOCSITE request.

System action
FTP continues.

Operator response
If the setting is not what you want, reissue the LOCSITE command with the correct values.

System programmer response
No action is needed.

Module
EZAFTPCK

EZA2423W  CHKPTPREFIX value must be Home, Local or Userid.
**Explanation**
While processing the FTP.DATA file, the server encountered an incorrect CHKPTPREFIX parameter. The valid values for the CHKPTPREFIX parameter are:
- Home
- Local
- Userid

**System action**
The line containing the error is ignored. Processing of the FTP.DATA file continues with the next line in the file.

**Operator response**
Contact the System programmer with the error message to have the FTP.DATA file corrected.

**System programmer response**
Correct the CHKPTPREFIX parameter in the FTP.DATA file.

**Module**
EZAFTPSM

**Procedure name**
read_ftpdata()

---

**EZA2424W**  
CHKptint parameter *(parameter)* is not valid

**Explanation**
The value specified for the CHKptint parameter of the LOCSITE command contained non-numeric characters.

**System action**
FTP continues.

**Operator response**
Reissue the LOCSITE command with valid values.

**System programmer response**
No action is needed.

**Module**
EZAFTPCK

---

**EZA2428I**  
CHKPTPrefix uses value to determine the HLQ of the FTP.CHECKPOINT file

**Explanation**
This is the result of a LOCSTAT command.
One of three possible valid values for CHKPTPREFIX:
- **Home**
  - The TSO prefix or the z/OS UNIX file system path
Userid
   The FTP user ID

Local
   The current directory from the LCD command

System action
   None.

Operator response
   No action is needed.

System programmer response
   No action is needed.

Module
   EZAFTPCL

Procedure name
   locstat()

EZA2477I  Secure port port_number does not allow the subcommand_name subcommand

Explanation
   The user entered an FTP subcommand while the FTP client was connected to the secure port. The secure port is the port number defined by the TLSPORT statement in the client's FTP.DATA file. FTP connections to the secure port are implicitly secured. The subcommand is not valid for TLS-secured sessions that are implicitly secured by connecting to the server using the TLSPORT port.

In the message text:

   port_number
      The port number configured with the TLSPORT statement in the client's FTP.DATA file, or the default TLSPORT number when no TLSPORT statement was coded in FTP.DATA.

   subcommand_name
      The subcommand that the user entered.

System action
   The subcommand is ignored.

Operator response
   No action is needed.

System programmer response
   If the subcommand is necessary on a TLS-secured session, do not connect to the TLSPORT. Instead, perform the steps for customizing the FTP client for TLS in z/OS Communications Server: IP Configuration Guide to secure the session for TLS without using the TLSPORT. See the information about the TLSPORT FTP client and server in z/OS Communications Server: IP Configuration Reference for more information about the TLSPORT statement. See the z/OS Communications Server: IP User's Guide and Commands for more information about subcommands.
User response
Contact the system programmer.

Problem determination
See the system programmer response.

Source
z/OS Communications Server TCP/IP: FTP

Module
Not applicable.

Routing code
10

Descriptor code
12

Example
In this example, assume that no TLSPORT statement is coded in the client's FTP.DATA file, but that the client has connected to the FTP server at port 990, the default value for the TLSPORT statement.

The user enters the `ccc` subcommand in response to the FTP client prompt:

```
Command: ccc
EZA2477I Secure port 990 does not allow the ccc subcommand.
```

**EZA2491I** Compressed mode implemented with type EBCDIC only.

Explanation
Compressed file transfers are implemented in EBCDIC format only.

System action
FTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

**EZA2494I** Checkpoint interval is `interval`

Explanation
The interval for generating checkpoint markers is displayed.

System action
FTP continues.
### EZA2500W  No valid checkpoint data available

**Explanation**
A RESTART command was issued, but there is no valid checkpoint data available.

**System action**
FTP continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

### EZA2501W  Restart requires EBCDIC data type

**Explanation**
A RESTART command was issued, but the representation type is not EBCDIC.

**System action**
FTP continues.

**Operator response**
Change the representation type to EBCDIC and reissue the RESTART command.

**System programmer response**
No action is needed.

### EZA2502W  Restart requires Block or Compressed transfer mode

**Explanation**
A RESTART command was issued, but the transfer mode is not block or compressed.
**System action**
FTP continues.

**Operator response**
Change the transfer mode to block or compressed and reissue the RESTART command.

**System programmer response**
No action is needed.

**Module**
EZAFTPCB

**EZA2508E**  Block or Compressed Mode requires Type E (EBCDIC)

**Explanation**
Block or compressed mode file transfer requires a transfer type of EBCDIC. No other transfer type is supported for block or compressed mode file transfer.

**System action**
No files are transferred.

**Operator response**
Use the TYPE command to change the transfer type to E (EBCDIC), or the MODE command to change the mode to stream. For more information about these commands, see the z/OS Communications Server: IP User's Guide and Commands.

**System programmer response**
No action is needed.

**Module**
EZAFTPCG, EZAFTPCP

**EZA2509I**  number megabytes transferred - interval second interval rate num_transferred_interval KB/sec - Overall transfer rate num_transferred_overall KB/sec

**Explanation**
This message indicates the total number of bytes of binary data transferred to or from the FTP client and the current rate of transfer.

*number* is the total number of megabytes transferred since the transfer started. Megabyte is defined as 1024*1024 bytes.

*interval* is the length of the measured transfer interval in seconds. This rate is set using LOCSITE PROGRESS or the PROGRESS statement in the FTP.DATA file.

*num_transferred_interval* is the number of KBs (KB equals 1000 bytes) transferred per second in this interval.

*num_transferred_overall* is the number of KBs (KB equals 1000 bytes) transferred per second since the transfer started.

**System action**
FTP continues.
Operator response
No action is needed.

System programmer response
No action is needed.

locstat

EZA2523E READTAPEFormat value is value but input tape is format

Explanation
A put was issued for a data set on tape and a non-blank value was specified for READTAPEFormat. The READTAPEFormat specification does not match the tape label.

value can be one of the following:

F
  Format was to be fixed
V
  Format was to be variable
S
  Format was to be spanned
X
  Format was to be lrecl X
If value is X, format is:
   lrecl nnnnn — tape label shows logical record length nnnnn
If value is F, V, or S, format is:
   lrecl X — tape label shows lrecl X format

System action
The request is rejected. FTP continues.

Operator response
Either specify the matching READTAPEFormat or change it to unspecified and try the request again. See the z/OS Communications Server: IP User's Guide and Commands for the description of the LOCSITE command for guidelines on using READTAPEFormat.

System programmer response
No action is needed.

EZAFTP CG, EZAFTCP C

**EZA2537E**  File transfer failed. File contains records that are longer than the LRECL of the new file.

Explanation
Options NOTRUNCATE and NOWRAPRECORD are set. The file being transferred contains records that are longer than the LRECL of the new file.

System action
The transfer is ended. FTP continues.

Operator response
Increase the value of LRECL for the new file or change the LOCSITE options.

System programmer response
No action is needed.
**EZA2541I**  Wildcards not allowed in PDS name

**Explanation**
The command was issued requesting members of a partitioned data. The name of the PDS contained one or more global file-name characters * or %. When listing members of a PDS, global file-name characters are allowed only in the member name, not in the PDS name.

**System action**
The command is rejected.

**Operator response**
Correct the data set name and reissue the request.

**System programmer response**
No action is needed.

**EZA2542I**  command fails: path name. User not authorized

**Explanation**
The command was issued for members of a partitioned data set, but the requested data set was protected by a security system such as RACF®, and the user was not authorized to read the data set.

**System action**
The command is rejected.

**Operator response**
Contact the owner of the data set for authorization to read the data set.

**System programmer response**
No action is needed.

**EZA2543I**  Error recalling data set data_set

**Explanation**
The command requested members of a partitioned data set. The PDS was migrated and needed to be recalled to read the PDS directory. FTP attempted to recall the data set, but was unable to successfully recall the data set.
System action
The command is rejected.

Operator response
Reissue the command. If the problem persists, contact the system programmer.

System programmer response
Determine why the data set cannot be recalled and correct the problem.

Module
EZAFTPMR

Module
EZAFTPMR

EZA2544I  Data set dsname is migrated and NoAutoRecall is specified.

Explanation
A command was issued to process a data set, but the data set is migrated and FTP is currently in NoAutoRecall mode.

System action
The command is rejected.

Operator response
Issue the LOCSITE AUTORECALL command to allow the data set to be recalled, and then reissue the FTP command.

System programmer response
No action is needed.

Module
EZAFTPMR

EZA2545I  Error mounting volume containing data set dsname

Explanation
The volume containing the requested data set was not mounted to the FTP system. FTP attempted to have the volume mounted, but was unable to get the volume mounted.

System action
The command is rejected.

Operator response
Reissue the command. If the problem persists, contact the system programmer.

System programmer response
Determine why the requested volume cannot be mounted to the MVS system.
Module
EZAFTPMR

EZA2546I  Volume containing dsname is not mounted and NoAutoMount specified.

Explanation
The command requested MVS data set dsname, but the volume containing dsname was not mounted to the system and FTP was currently in No Automount mode.

System action
The command is rejected.

Operator response
If possible, issue the LOCSITE AUTOMOUNT command to allow the volume containing the data set to be automatically mounted; otherwise, contact the system operator to mount the volume to the system. Then reissue the command.

System programmer response
No action is needed.

Module
EZAFTPMR

EZA2547I  Partitioned data set 'path name' does not exist.

Explanation
The command requested that members of a partitioned data set be listed, but the requested data set could not be found.

System action
The command is rejected.

Operator response
Verify that the PDS name was entered correctly.

System programmer response
No action is needed.

Module
EZAFTPMR

EZA2548I  'data_set(member)' requests members but data_set is not a partitioned data set.

Explanation
The command was entered using the MVS syntax data_set(member), which indicates that members of the PDS data_set are to be listed; however, data_set is not a partitioned data set.

System action
The command is rejected.
Operator response
Verify that the correct data set name was entered. Reissue the command with the correct data set name.

System programmer response
No action is needed.

Module
EZAFTPMR

EZA2549I  Error opening data_set_name

Explanation
The command requested members of a PDS, but FTP was unable to open the PDS to read the directory. This can be a temporary problem, for example the data set is currently in use, or it can be a permanent error with the data set.

System action
The command is rejected.

Operator response
Reissue the command. If the problem persists, contact the system programmer.

System programmer response
Correct the problem with the data set.

Module
EZAFTPMR

EZA2550W  Name length error for filename name

Explanation
The pathname provided for a data transfer (get, put, append), delete, or rename request is too long. The name, when combined with the current working directory, must adhere to the following maximum lengths:

- 44 for a physical sequential data set
- 55 for a member of a PDS (includes the parentheses for the member name)
- 1023 for a file in the hierarchical file system.

Note: The maximum length for a file name is 255 -- the total pathname maximum length is 1023.

System action
The request is not performed.

Operator response
Reissue the request with a name that meets the limits for the type of data set or file.

System programmer response
No action is needed.
Module
EZAFTPCG, EZAFTPCP

**EZA2551W  Unknown HOME directory for filename name**

**Explanation**
A command was issued that required the client to resolve the user's HOME directory name (for example, a file name was entered that began with the directory notation ~/) but the client was unable to determine the user's HOME directory.

**System action**
The command is rejected. FTP continues.

**Operator response**
Verify that the OMVS user ID has a HOME directory. If necessary, define a HOME directory for the user ID.

**System programmer response**
No action is needed.

Module
EZAFTPCG, EZAFTPCP

**EZA2552W  Nonexistent GDG data set dsname**

**Explanation**
The relative generation number for the Generation Data Group (GDG) data set is invalid. The number should be a negative integer, a positive integer (for a store command only), or a 0, enclosed in parentheses.

**System action**
FTP continues.

**Operator response**
Reissue the command with a valid relative number for the data set.

**System programmer response**
No action is needed.

Module
EZAFTPCG, EZAFTPCP

**EZA2553W  Unable to send dsname**

**Explanation**
The named data set is for a generation data group (GDG) that does not exist.

**System action**
The data set is not sent. FTP continues.
**Operator response**
Ensure that the GDG exists.

**System programmer response**
No action is needed.

**Module**
EZAFTPCG, EZAFTPCP

**EZA2554W**  
*cmd fails: filename is a directory.*

**Explanation**
The file that is named is a directory. The get, put, and append commands do not support file transfer for a directory file.

**System action**
The command is rejected. FTP continues.

**Operator response**
Reissue the command specifying a name of a file that is not a directory.

**System programmer response**
No action is needed.

**Module**
EZAFTPCG, EZAFTPCP

**EZA2555W**  
*cmd fails: filename is a pipe or FIFO.*

**Explanation**
The file that is named is a pipe or FIFO special file. The file transfer subcommands do not support files of this type.

**System action**
The command is rejected. FTP continues.

**Operator response**
Reissue the command specifying a name of a file that is not a pipe or FIFO special file.

**System programmer response**
No action is needed.

**Module**
EZAFTPCG, EZAFTPCP

**EZA2556W**  
*cmd fails: filename is a character special file.*

**Explanation**
The file that is named is a character special file. The file transfer subcommands do not support files of this type.
System action
The command is rejected. FTP continues.

Operator response
Reissue the command specifying a name of a file that is not a character special file.

System programmer response
No action is needed.

Module
EZAFTPCG, EZAFTPCP

EZA2557W  cmd fails: filename is an unknown type.

Explanation
The file that is named is an unknown type. The file transfer subcommands do not support files of this type.

System action
The command is rejected. FTP continues.

Operator response
Reissue the command specifying a name of a file that is not an unknown file type.

System programmer response
No action is needed.

Module
EZAFTPCG, EZAFTPCP

EZA2558W  cmd fails: filename does not exist.

Explanation
The file that is named does not exist. The put and append subcommands require that the file exists.

System action
The command is rejected. FTP continues.

Operator response
Reissue the command specifying a name of a file exists.

System programmer response
No action is needed.

Module
EZAFTPCP

EZA2560W  Volume is not ready and automatic tape mounts are not allowed.
Explanation
A request to read from a data set or write to a data set on a tape volume was received. The tape volume is not mounted and you have requested NoAutoTapeMount.

System action
The request is not performed.

Operator response
Request that the tape be mounted by the operator and then reissue the request. Also, you can code the FTP.DATA statement AUTOTAPEMOUNT to allow automatic tape mounts to occur.

System programmer response
No action is needed.

Module
EZAFTPCG, EZAFTPCP

EZA2561W  Error allocating tape data set dsname

Explanation
The client attempted to allocate to a data set on a tape volume. The dynamic allocation was unsuccessful.

System action
The command is rejected. FTP continues.

Operator response
No action is needed.

System programmer response
Examine the trace and look for trace messages with the tag alloc_tape. These trace messages provide the reason codes for the dynamic allocation error.

Module
EZAFTPCG, EZAFTPCP

EZA2562W  Allocation of dsn failed (error code s99error info code s99info S99ERSN s99ersn)

Explanation
The client attempted to allocate to a data set on a DASD or tape volume. The dynamic allocation was unsuccessful.

In the message text:

ds
The data set name.

s99error
The hexadecimal Error Reason Code from an SVC 99 request or a DYNALLOC request. See the information about interpreting Error Reason Codes from DYNALLOC in z/OS MVS Programming: Authorized Assembler Services Guide.
**s99info**  
The hexadecimal Information Reason Code from an SVC 99 request. See the information about interpreting Information Reason Codes from DYNALLOC in z/OS MVS Programming: Authorized Assembler Services Guide.

**s99ersn**  
The hexadecimal SMS Reason Code from SVC 99 request. See the information about S99RBX fields in z/OS MVS Programming: Authorized Assembler Services Guide for more information about SMS Reason Codes.

**System action**  
The command is rejected. FTP continues.

**Operator response**  
No action is needed.

**System programmer response**  
Examine the trace and look for trace messages with the tag `alloc_dasd`. These trace messages provide the reason codes for the dynamic allocation error.

**User response**  
Contact the system programmer.

**Problem determination**  
Look up the S99ERROR, S99INFO, and S99ERSN codes information as described in the explanation and take the actions recommended there. If the FTP client trace was enabled at the time of failure, and at least option FSC was enabled, you might be able to obtain more information by inspecting trace output for messages with the tag `alloc_dasd`. See the information about diagnosing FTP client problems with tracing in z/OS Communications Server: IP Diagnosis Guide for more information about using traces.

**Source**  
z/OS Communications Server TCP/IP: FTP

**Module**  
ezaftpcc, ezaftpcg, ezaftpcp

**Routing code**  
*  

**Descriptor code**  
*  

**Automation**  
Not applicable.

**Example**  
Not applicable.

**EZA2563W**  
Data set `dsname` used exclusively by someone else.
Explanation
A data transfer (get, put or append) of a partitioned data set (PDS) was requested and the member requested is currently in use.

System action
The operation is not performed.

Operator response
Try the operation later when no one else is using the member of the PDS.

System programmer response
No action is needed.

Module
EZAFTPCG, EZAFTPCP

EZA2564W   Open of dsname failed.

Explanation
The data set cannot be opened.

System action
The requested operation is terminated. FTP continues.

Operator response
Rerun the FTP with tracing turned on. Contact the system programmer.

System programmer response
Look at the trace and find one of the following trace entry sequences:

- seq_open_file: xyz -> ...
  seq_open_file: failed (aa): bbbb

The first line describes open mode with values x, y, and z that are defined as follows:

- x = I --> Input
- x = O --> Output
- y = S --> Stream I/O
- y = R --> Record I/O
- z = B --> Binary stream
- z = T --> Text stream

The second line describes the error that occurred. aa is the errno value returned from the fopen of file. bbbb is the text associated with the errno value. See the following values and text that could be observed:

(61): Error trying to define file
The file is already opened.

- seq_open_file: Using BSAM, I, SYS00006, , 29
  0, 0, 0
  seq_open_file: BSMOP returned NULL, rc xxx, reason yyy

The second line describes the error which occurred on the open. Use the return code (rc) and reason code to determine why the error occurred.
For return code 80a, reason code 10, or return code 4, FTP was unable to obtain storage to open the data set. Increase the region size for the FTP job or user.

Module
EZAFTPCG, EZAFTTCP

EZA2565W Command fails for dsname. User not authorized.

Explanation
The command was issued to read a data set. The requested data set is protected by a security system such as RACF, and the user is not authorized to read the data set.

System action
The data set is not sent. FTP continues.

Operator response
Contact the owner of the data set for authorization to read the data set.

System programmer response
No action is needed.

Module
EZAFTTCP

EZA2566E Requested action not taken: invalid REST parameter.

Explanation
A command is being processed as part of a restart of a checkpointed command. Before the command was sent, a REST command was processed and a restart marker was saved. The restart marker is incorrect.

System action
The command is rejected.

Operator response
No action is needed.

System programmer response
Look at the trace to determine the error that occurred when the repositioning was done.

Module
EZAFTPCG, EZAFTTCP

EZA2567E Record structure requires stream mode (mode S)

Explanation
Record structure transfers require the stream transmission mode (mode S). No other transmission mode is supported for record structure file transfers.
System action
No files are transferred.

Operator response
Use the STREAM command or MODE S command to change the transmission mode to stream mode. For more information about these commands, see the z/OS Communications Server: IP User’s Guide and Commands.

System programmer response
No action is needed.

Module
EZAFTPCG, EZAFTPCP

EZA2568E Transfer aborted: attempt to connect to db2name failed (sql_rc)

Explanation
FTP attempted to process a SQL request, but was unable to connect to the Db2 subsystem named db2name. (sql_rc) is the SQL return code. See http://www.ibm.com/support/knowledgecenter/SSEPH2/welcome for a complete description of SQL return codes.

System action
No data is sent. FTP continues.

Operator response
If the Db2 subsystem name (db2name) is incorrect, issue a 'locsite db2=' command for the correct Db2 subsystem name, and resubmit the SQL query. If the Db2 subsystem name is correct, contact the system programmer for FTP.

System programmer response
Ensure that the Db2 subsystem has been started.

Module
EZAFTPCP

EZA2569E Transfer aborted: SQL not available. Attempt to open plan plan_name failed (sql_rc)

Explanation
FTP attempted to process a SQL request, but was unable to open the FTP Db2 subsystem plan named plan_name. (sql_rc) is the SQL return code. See http://www.ibm.com/support/knowledgecenter/SSEPH2/welcome for a complete description of SQL return codes.

System action
No data is sent. FTP continues.

Operator response
If FTP SQL support should be available, contact the system programmer for FTP. If a SQL query was not intended, issue locsite filetype= command to change the file type from SQL to SEQ before the next FTP put command.
**System programmer response**

Ensure that a BIND was done for plan `plan_name` and that execute authorization was granted for the plan.

If you used a plan name other than EZAFTPMQ for the EZAFTPMQ DBRM, your FTP.DATA file must contain a DB2PLAN statement to specify the plan name that the FTP client is to use.

**Module**

EZAFTPCP

**EZA2570E** Transfer aborted: SQL PREPARE/DESCRIBE failure

**Explanation**

Db2 encountered an error while processing a SQL statement submitted through FTP. The FTP output file contains the error message from Db2.

**System action**

FTP continues.

**Operator response**

Correct the error indicated in the output file, and resubmit the SQL request.

**System programmer response**

No action is needed.

**Module**

EZAFTPCP

**EZA2571E** Transfer aborted: SQL CURSOR DECLARE failure

**Explanation**

Db2 encountered an error while processing a SQL statement submitted through FTP. The FTP output file contains the error message from Db2.

**System action**

FTP continues.

**Operator response**

If possible, correct the error indicated in the output file and resubmit the SQL request. Otherwise, contact the system programmer for FTP.

**System programmer response**

Correct the error indicated by the message contained in the output file. For a detailed explanation of Db2 error codes, see [http://www.ibm.com/support/knowledgecenter/SSEPH2/welcome](http://www.ibm.com/support/knowledgecenter/SSEPH2/welcome).

**Module**

EZAFTPCP

**EZA2572E** Transfer aborted: SQL CURSOR OPEN failure
Explaination
Db2 encountered an error while processing a SQL statement submitted through FTP. The FTP output file contains the error message from Db2.

System action
FTP continues.

Operator response
If possible, correct the error indicated in the output file and resubmit the SQL request. Otherwise, contact the system programmer for FTP.

System programmer response
Correct the error indicated by the message contained in the output file. For detailed explanation of Db2 error codes, see http://www.ibm.com/support/knowledgecenter/SSEPH2/welcome.

Module
EZAFTPCP

EZA2573E Transfer aborted: unsupported SQL statement

Explaination
FTP retrieved a file (or data set) while the local file type was SQL, but the file contains an SQL statement that is not supported by FTP.

System action
The PUT command is rejected.

Operator response
If an SQL query was intended, issue the PUT command for a file that contains an SQL SELECT statement. If an SQL query was not intended, issue a site filetype= command to change the current setting of filetype.

System programmer response
No action is needed.

Module
EZAFTPCP

EZA2574E Transfer aborted: SQL FETCH error (sql_rc)

Explaination
A SQL query was submitted through FTP, but Db2 has encountered an error retrieving the data. Data retrieval for this query is discontinued. Data in the output file may be incomplete. code indicates the reason for the failure.

(sql_rc) is the SQL return code. See http://www.ibm.com/support/knowledgecenter/SSEPH2/welcome for a complete description of SQL return codes.

System action
FTP continues.
Operator response
Resubmit the query. If the problem persists, contact the system programmer for FTP.

System programmer response

Module
EZAFTPCP

EZA2575E Transfer aborted: insufficient storage to process SQL request

Explanation
A SQL query was being attempted through FTP, but there is not enough system storage available for FTP to complete the request.

System action
No data is sent. FTP continues.

Operator response
Try again. If the problem persists, contact the system programmer for the FTP client.

System programmer response
Determine why FTP is unable to acquire dynamic storage and correct the problem.

Module
EZAFTPCP

EZA2576E Transfer aborted: internal error while processing SQL request

Explanation
FTP has encountered an internal error while processing a SQL request. No data is sent.

System action
FTP continues.

Operator response
Try again. If the problem persists, contact the system programmer for FTP.

System programmer response
If the problem occurs repeatedly, use the client's debug facility to get a trace of the FTP operation and contact the IBM Support Center.

Module
EZAFTPCP

EZA2578I Local directory name set to hierarchical file directory
**Explanation**
The name of the local directory is a hierarchical file directory. Files are grouped in a directory, which is a special kind of file consisting of the names of a set of files and other information about them.

**System action**
FTP continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
EZAFTPCL

---

**EZA2580E**  
*cmd* *cmd* failed : *error_description*

**Explanation**
The FTP user issued the command *cmd*. While processing the command, the FTP client issued a C runtime library function that did not complete successfully.  
*error_description* describes error.

**System action**
The command *cmd* is not executed.

**Operator response**
Reissue the command. If the problem persists, contact the system programmer with the error message.

**System programmer response**
correct the error indicated by *error_description*.

**Module**
EZAFTPCD

---

**EZA2581I**  
*HFS directory* *directory* *is the current working directory*

**Explanation**
The user has issued the LCD command to change the current working directory. The LCD command has completed successfully and has changed the current working directory to the z/OS UNIX file system directory indicated by the *directory* value.

**System action**
The current working directory is changed to the new directory.
Operator response
No action is needed.

System programmer response
No action is needed.

Module
EZAFTPCD

EZA2582E cmd failed: Unknown HOME directory

Explanation
A command was issued that required the client to resolve the user's HOME directory name (for example, a pathname was entered that began with the directory notation ~/) but the client was unable to determine the user's HOME directory.

System action
The command is rejected. FTP continues.

Operator response
Verify that the OMVS user ID has a HOME directory. If necessary, define a HOME directory for the user ID.

System programmer response
No action is needed.

Module
EZAFTPCD

EZA2583I Working Directory for GET is NULL Device

Explanation
The user has entered the LCD *DEV.NULL command to change the current working directory of the client to the NULL directory. When the current working directory is the NULL directory, data transferred to the client from the server (GET or RETR), will not be stored at the client, but will be received and discarded. The NULL directory is used only for data transferred from the server to the client. Data transferred from the client to the server (PUT) will continue to use the working directory which was in effect prior to the issuance of the LCD *DEV.NULL command. The directory which will be used for the PUT command is described in the message that follows this one:

- EZA2584I for PUT is “directory” partitioned data set
- EZA2585I for PUT is the z/OS UNIX file system directory directory
- EZA2586I for PUT is “directory” name prefix.

System action
FTP continues.

Operator response
No action is needed.
**System programmer response**
No action is needed.

**Module**
EZAFTPCD, EZAFTPCL

**EZA2584I** for PUT is "directory" partitioned data set.

**Explanation**
This message is part of a group. See EZA2583I for message group information.

**EZA2585I** for PUT is HFS directory directory

**Explanation**
This message is part of a group. See EZA2583I for message group information.

**EZA2586I** for PUT is "directory" name prefix.

**Explanation**
This message is part of a group. See EZA2583I for message group information.

**EZA2587E** LCD ../ only valid for HFS directories

**Explanation**
The LCD command was entered with a pathname of ../ to back up one directory level, but the current working directory was either an MVS partitioned data set, or an MVS high level qualifier. The “../” notation is only valid when the current working directory is a z/OS UNIX file system directory.

**System action**
The LCD command is rejected.

**Operator response**
Reissue the LCD command with the corrected pathname.

**System programmer response**
No action is needed.

**Module**
EZAFTPCD

**EZA2588E** Unable to connect to alternate TCPIP name

**Explanation**
Error returned from setibmopt routine.

**System action**
None.
Operator response
If the TCPIP start parameter is used, check the spelling of the parameter. If the spelling is correct, check that the stackname specified in the start parameter matches the TCPIPJOBNAME specified in the TCPIP.DATA configuration file. For more information about the TCPIP.DATA configuration file, see the z/OS Communications Server: IP Configuration Reference.

System programmer response
No action is needed.

Module
EZAFTPCY

EZA2589E  Connection to server interrupted or timed out. operation

Explanation
The FTP server is no longer responding to the FTP client or the user has caused an interrupt (for example, Cntrl-c).

operation is the operation that was in progress at the time of the interruption. Possible values are:

**Initial connection**
During initial connection to a non-IPv6 server.

**Initial IPv6 connection**
During initial connection to an IPv6 server.

**Waiting for data connection**
Waiting for the server to establish the data connection.

**Sending a command**
Sending a command to the server on the control connection.

**Sending ABORT command**
Sending the ABORT command to the server.

**Receiving data**
Receiving data on the data connection.

**Sending data**
Sending data on the data connection.

**Waiting for reply**
Waiting for a reply from the server.

**Sending command to SOCKS server**
Sending a command to a SOCKS server.

**Waiting for reply from SOCKS server**
Waiting for a reply from a SOCKS server.

**Establishing data connection through SOCKS server**
While trying to establish a data connection through a SOCKS server.

**Initial connection to SOCKS server**
During initial connection to a SOCKS server.

System action
The current subcommand is ended.

Operator response
The server may not be responding because of traffic in the network. In this case a retry may be successful. The server may have crashed, in which case it will need to be restarted before attempting communications again. A
A complete description of each operation's relevant client timers and recommended steps for diagnosis can be found in the section on diagnosing FTP transfer failures with EZA2589E in z/OS Communications Server: IP Diagnosis Guide. If the problem continues, contact the system programmer.

**System programmer response**

Possible sources of the failure include the client, server, network, firewall, and configuration errors. See the section on diagnosing FTP transfer failures with EZA2589E in z/OS Communications Server: IP Diagnosis Guide for recommended actions to diagnose the failure.

**Module**

EZAFTPSC

**EZA2590E  function error from location - error**

**Explanation**

The FTP client has issued a socket call and received an error return code.

*function* is the C library function that failed and returned an error.

*location* is the location in the FTP client.

*error* is the C run-time library error message for the failure. For more information, see z/OS Language Environment Runtime Messages.

**System action**

Communications are interrupted. The current operation is ended.

**Operator response**

Try the operation again. If the problem persists, contact the system programmer.

**System programmer response**

If the problem persists, report the contents of the message to the IBM Software Support center.

**Module**

EZAFTPSC

**EZA2591I  Waiting for recall of “dsname”**

**Explanation**

You issued a subcommand which referenced the data set *dsname*, which has been migrated.

**System action**

The client attempts to recall the data set.

**Operator response**

No action is needed.

**System programmer response**

If you do not want the FTP client to recall migrated data sets, use the **LOCSIt**e subcommand to set the autorecall mode to noautorecall. See z/OS Communications Server: IP User's Guide and Commands for information about the **LOCSIt**e subcommand.
**EZA2592I**  Waiting for mount for “dsname”  

**Explanation**  
You issued a subcommand which references `dsname`, an existing data set which is cataloged on a volume which is not mounted. The client is attempting to mount the volume so it can complete the request.

**System action**  
The client waits for the volume to be mounted.

**Operator response**  
If you do not want the FTP client to mount unmounted volumes, use the `LOCSIte` subcommand to set automount mode to noautomount. See z/OS Communications Server: IP User’s Guide and Commands for information about the `LOCSIte` subcommand.

**System programmer response**  
No action is needed.

---

**EZA2593I**  HFS directory “directory” created.  

**Explanation**  
The indicated the z/OS UNIX file system directory has been created.

**System action**  
The directory is created. FTP continues.

**Operator response**  
No action is needed.

**System programmer response**  
No action is needed.

---

**EZA2594E**  LMKDIR failed. Unit=unit_name invalid for PDS.  

**Explanation**  
The LMKDIR command was issued to create a new PDS, but the current setting of the LOCSITE UNIT parameter was not valid for a PDS (for example, the LOCSITE UNIT was set to TAPE and a PDS cannot be allocated on a tape ).

**System action**  
The LMKDIR command is rejected.
Operator response
Issue the LOCSITE command with the UNIT parameter to change the setting of the UNIT parameter to a unit that is valid for a PDS, then reissue the LMKDIR command.

System programmer response
No action is needed.

Module
EZAFTPCD

EZA2595E   LMKDIR failed. DCBDsn data set dcbdsn_name has a recfm of recfm which is invalid for a PDS.

Explanation
The LMKDIR command was issued to create a new PDS. The LOCSITE DCBDsn parameter was in effect specifying that all new data sets be created with the same characteristics as the data set dcbdsn_name. However, the model data set dcbdsn_name had a record format recfm that is not valid for a PDS. Record formats FBS, VBS, and VS are not valid record formats for a PDS.

System action
The LMKDIR command is rejected.

Operator response
Use the LOCSITE command to either specify a different DCBDsn data set, or to specify the data set characteristics without using the DCBDsn model data set parameter. Or use a combination of DCBDsn and RECFM LOCSITE parameters to use all of the characteristics of the model DCBDsn data set except the record format, which will be overridden by the RECFM parameter. After changing the appropriate LOCSITE parameters, reissue the LMKDIR command.

System programmer response
No action is needed.

Module
EZAFTPCD

EZA2596E   LMKDIR fails: new_directory. User not authorized

Explanation
The LMKDIR command was issued to create the new PDS new_directory. However, some part of the high-level qualifiers for new_directory were protected by a security system, such as RACF, and the user did not have sufficient authority to create a data set by this name.

System action
The LMKDIR command is rejected.

Operator response
Contact the security administrator to get the necessary authorization for creating the data set.

System programmer response
No action is needed.
EZA2597E  LMKDIR failed. Volume=serial is a tape and is invalid for a PDS.

Explanation
The LMKDIR command was issued to create a new PDS. The LOCSITE VOLUME parameter was in effect, specifying that all new data sets be allocated on volume serial. serial was determined to be a tape, and partitioned data sets cannot be allocated to tape.

System action
The LMKDIR command is rejected.

Operator response
Issue the LOCSITE VOLUME command to change or reset the volume serial for new data sets to a direct access volume, then reissue the LMKDIR command.

System programmer response
No action is needed.

Module
EZAFTPCD

EZA2598E  LMKDIR failed. Recfm recfm is invalid for a PDS.

Explanation
The LMKDIR command was issued to create a new PDS. The LOCSITE RECFM parameter had a value of recfm, which is not a valid record format for a PDS.

System action
The LMKDIR command is rejected.

Operator response
Issue the LOCSITE RECFM command to change the setting of RECFM to a record format that is valid for a PDS, then reissue the LMKDIR command. Incorrect record formats are FBS, VBS, and VS).

System programmer response
No action is needed.

Module
EZAFTPCD

EZA2599W  ftp_data file, line line_number: NCP obsolete: parameter not required.

Explanation
While processing the FTP.DATA file, the FTP client encountered the NCP keyword. This keyword is no longer required. Access method buffer information is computed internally.

Operator response
No action is needed.
**System programmer response**

If the FTP.DATA file is used only by the FTP server and client for z/OS UNIX System Services MVS, and is not shared with another server or client that needs the keyword, remove the keyword from the FTP.DATA file. See the z/OS Communications Server: IP Configuration Reference for information on the parameters of the FTP.DATA file.

**Module**

EZAFTPEP

**EZA2600E** Command *command name* is not a valid proxy command.

**Explanation**

The indicated command was not a valid command that can be sent to the proxy server. For example, local client commands cannot be sent to the proxy server.

**System action**

The command is rejected.

**Operator response**

Reissue the command without the proxy prefix, or enter a valid command for the proxy server.

**System programmer response**

No action is needed.

**Module**

EZAFTPPC

**EZA2601W** NOWRTAPEFastio already specified. WRTAPEFastio ignored.

**Explanation**

The NOWRTAPEFastio parameter was already specified on this LOCSITE subcommand. The WRTAPEFastio parameter is ignored.

**System action**

FTP Continues

**Operator response**

Issue the LOCSITE subcommand again with the required setting.

**System programmer response**

No action is needed.

**EZA2602E** Error reading the file

**Explanation**

The local file could not be read.

**System action**

FTP continues.
**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
EZAFTPCP

**EZA2603E Error sending the file**

**Explanation**
The local file could not be sent.

**System action**
FTP continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
EZAFTPCP

**EZA2604I DSORG=DA requires structure: FILE, mode: STREAM, and transfer type: IMAGE.**

**Explanation**
A command was issued that required the server to transfer an MVS data set which had a dsorg of DA (Direct Access). Data sets with a dsorg of DA can only be transferred in stream mode with the transfer type set to image (binary).

**System action**
The command is rejected. FTP continues.

**Operator response**
Set the structure to FILE, the mode to STREAM, the transfer type to IMAGE, and reissue the command.

**System programmer response**
No action is needed.

**EZA2605W Local data set is full (value)**

**Explanation**
FTP was unable to write to the local data set because it is full. One of the following explicit values was received when the write failed:

19
An unrecoverable error has permanently marked the data set in error.
An attempt was made to extend a non-extendable file.

A write system error occurred.

**System action**
FTP continues.

**Operator response**
Request a larger space allocation for the local data set and try the transfer again.

**System programmer response**
No action is needed.

**Module**
EZAFTPCG

**EZA2606W  File I/O error value**

**Explanation**
FTP experienced a file I/O error when reading from or writing to a data set or file. 
`value` is an unrecognized error value from the file I/O request.

**System action**
FTP continues.

**Operator response**
Notify the system programmer about the error.

**System programmer response**
Activate the debug option and reenter the request. Contact the IBM Software Support Center.

**Module**
EZAFTPCG

**EZA2607W  Transfer aborted due to receive error (file_status)**

**Explanation**
The transfer of data ended because of an error receiving data from the data connection. 
`file_status` is an FTP error number. The message immediately following this one gives the complete description of the error.

**System action**
FTP continues.

**Operator response**
Notify the system programmer about the error.
System programmer response
Correct the error described in file_status.

Module
EZAFTPCG

EZA2617W parameter2 already specified. parameter1 ignored.

Explanation
The LOCSITE subcommand parameters parameter1 and parameter2 are mutually exclusive and cannot be specified on the same LOCSITE subcommand. parameter2 has already been encountered on this LOCSITE subcommand, causing parameter1 to be rejected.

System action
parameter2 is used instead of parameter1. FTP continues.

Operator response
If you want to use parameter1, issue a LOCSITE subcommand specifying parameter1, but not parameter2. See the z/OS Communications Server: IP User's Guide and Commands or z/OS Communications Server: IP Configuration Guide for information about FTP in general and to z/OS Communications Server: IP User’s Guide and Commands for information about the parameters of the LOCSITE subcommand.

System programmer response
No action is needed.

Module
EZAFTPCK

EZA2624W WRTAPEFastio already specified. NOWRTAPEFastio ignored.

Explanation
The WRTAPEFastio parameter was already specified on this LOCSITE subcommand. The NOWRTAPEFastio parameter is ignored.

System action
FTP continues.

Operator response
Issue the LOCSITE subcommand again with the required setting.

System programmer response
No action is needed.

EZA2625W Invalid format data set name “name”. Dcbdsn parameter ignored.

Explanation
The data set name specified for the DCbdsn parameter of the LOCSITE command, which is used to specify the name of the data set to be used as a model for allocation of new data sets, has an incorrect format. The data set name must conform to MVS data set naming conventions.
**System action**
The DCbdsn parameter is ignored. FTP continues.

**Operator response**
Reissue the LOCSITE command with a valid MVS data set name. See the z/OS Communications Server: IP User's Guide and Commands or z/OS Communications Server: IP Configuration Guide for information on FTP in general and to z/OS Communications Server: IP User's Guide and Commands for information on the parameters of the LOCSITE subcommand.

**System programmer response**
Assist the user as necessary.

---

**EZA2627I**  
Internal debug option value enabled

**Explanation**
The internal debug options are set on. If value is 1, regular tracing is on. If value is 2, detailed tracing is on.

**System action**
FTP continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
EZAFTPCL

---

**EZA2628W**  
parm parameter's value (value) must be between low value and high value. The parameter is ignored.

**Explanation**
The LOCSITE command was specified with the parm parameter, but the value, value, specified for the parm parameter was outside the valid range.

**System action**
The parm parameter is ignored.

**Operator response**
Reissue the command with a valid value. See the z/OS Communications Server: IP User's Guide and Commands or z/OS Communications Server: IP Configuration Guide for information on FTP in general and to z/OS Communications Server: IP User's Guide and Commands for information on the parameters of the LOCSITE subcommand.

**System programmer response**
No action is needed.
**EZA2631W** CHKptint parameter *(value)* is larger than a 4 byte integer. Chkptint ignored.

**Explanation**
The value of the CHKptint parameter, *value*, was larger than the maximum value allowed for a 4 byte integer.

**System action**
The value in error is ignored.

**Operator response**
Reissue the LOCSITE command with a valid value specified for the CHKptint parameter. See the *z/OS Communications Server: IP User's Guide and Commands* or *z/OS Communications Server: IP Configuration Guide* for information on FTP in general and to *z/OS Communications Server: IP User’s Guide and Commands* for information on the parameters of the LOCSITE subcommand.

**System programmer response**
No action is needed.

---

**EZA2632I** Data set name too long. Use MVS or HFS naming conventions.

**Explanation**
A command was entered with a data set name that was longer than the MVS maximum of 44 characters or the *z/OS UNIX* file system maximum of 1023 characters.

**System action**
The command is rejected.

**Operator response**
Reissue the command with the correct data set or *z/OS UNIX* file name.

**System programmer response**
No action is needed.

---

**EZA2633I** File name too long. Use HFS naming conventions.

**Explanation**
The command was entered with a file name that was longer than the *z/OS UNIX* file system maximum of 1023 characters.

**System action**
The command is rejected.
Operator response
Reissue the command with the correct z/OS UNIX file name.

System programmer response
No action is needed.

Module
EZAFTPMR

EZA2634I  cmd failed: Unknown HOME directory

Explanation
A command was issued that required FTP to resolve the user's HOME directory name (for example, a pathname was entered that began with the directory notation ~/) but FTP was unable to determine the user's HOME directory.

System action
The command is rejected. FTP continues.

Operator response
Verify that the OMVS user ID has a HOME directory. If necessary, define a HOME directory for the user ID.

System programmer response
No action is needed.

Module
EZAFTPMR

EZA2635I  Member name too long. Use MVS naming conventions.

Explanation
The command was entered with a data set name and member name requested, but the member name was longer than the MVS maximum length of 8 characters.

System action
The command is rejected.

Operator response
Reissue the command with the correct member name syntax.

System programmer response
No action is needed.

Module
EZAFTPMR

EZA2636E  TSO Command failed with return code value
**Explaination**
The TSO command requested completed in error.

**System action**
The command fails.

**Operator response**
Correct the command and reissue. If the command is correct but still fails, turn on debug and reissue the command. Give the debug output to the system programmer.

**System programmer response**
The debug output from the TSO command shows the return code and reason code from the IKJEFTSR service facility routine, which is used to invoke the TSO command from FTP. See z/OS TSO/E Programming Services for a list of return codes and reason codes for the IKJEFTSR service facility routine.

**Module**
EZAFTPCU

<table>
<thead>
<tr>
<th>Module</th>
<th>EZAFTPCU</th>
</tr>
</thead>
<tbody>
<tr>
<td>EZA2637I</td>
<td>No data sets found</td>
</tr>
</tbody>
</table>

**Explaination**
The command requested a listing of one or more data sets, but FTP could not find any data sets that matched the requested pathname.

**System action**
The command is rejected.

**Operator response**
Verify that the correct data set name or path was entered.

**System programmer response**
No action is needed.

**Module**
EZAFTPMR

---

<table>
<thead>
<tr>
<th>Module</th>
<th>EZAFTPMR</th>
</tr>
</thead>
<tbody>
<tr>
<td>EZA2638I</td>
<td>error reading PDS directory</td>
</tr>
</tbody>
</table>

**Explaination**
The command requested members of a partitioned data set, but FTP was unable to read the directory of the PDS.

**System action**
The command is rejected.

**Operator response**
Reissue the command. If the problem persists, contact the system programmer.
System programmer response
Correct the problem with the data set.

Module
EZAFTPMR

EZA2639I  Qualified too long. Use MVS naming conventions.

Explanation
A command was entered with a data set name that contained a qualifier that was longer than the MVS maximum of 8 characters.

System action
The command is rejected.

Operator response
Correct the data set name and reissue the command.

System programmer response
No action is needed.

Module
EZAFTPMR

EZA2640I  Error allocating storage for list

Explanation
FTP was not able to allocate the storage necessary to process the command.

System action
The command is rejected.

Operator response
Reissue the command. If the problem persists, contact the system programmer.

System programmer response
FTP might need to be started with a larger region size.

Module
EZAFTPMR

EZA2641I  Patterns (% and *) may only be specified in the last qualifier when in directory mode

Explanation
The command was entered with a pathname that contained the global file-name characters % and *. The global file-name characters were not in the last qualifier of the pathname, and the MVS server was currently in directory mode. The global file-name characters can only be used in the last qualifier when in directory mode.
System action
The command is rejected.

Operator response
Either correct the pathname to have the global file-name characters in the last qualifier and reissue the command in directory mode, or issue the LOCSITE/SITE DATASETMODE command to change the server to data set mode and then reissue the command as is.

System programmer response
No action is needed.

Module
EZAFTPMR

EZA2643I  Unable to obtain data set list

Explanation
A service call was issued to obtain the list of requested data sets from the MVS system, but the service call was unsuccessful.

System action
The command is rejected.

Operator response
Try the command again. If the problem persists, contact the system programmer.

System programmer response
If necessary, re-create the problem with FTP traces turned on. Locate the last occurrence of the trace message pslist: reason code rc from CSI. This trace message will contain the reason code from the service call that was unsuccessful. Determine the cause and correct the problem.

Recommend Trace: UTL

Module
EZAFTPMR

EZA2644I  No members found.

Explanation
The command requested members of a partitioned data set, but no members were found in the PDS that matched the requested name.

System action
The command is rejected.

Operator response
Verify that the member name or path was entered correctly.
System programmer response
No action is needed.

Module
EZAFTPMR

EZA2658W parm parameter (value) is not valid. parm ignored.

Explanation
The LOCSITE command was entered with the parm parameter, but the value specified, value, was not a valid value. Valid values for the parm parameter are Catlg and Delete.

System action
The parm parameter is ignored.

Operator response
Reenter the LOCSITE subcommand, specifying the correct value for parm. See the z/OS Communications Server: IP User's Guide and Commands or z/OS Communications Server: IP Configuration Guide for information on FTP in general and to z/OS Communications Server: IP User’s Guide and Commands for information on the parameters of the LOCSITE subcommand.

System programmer response
No action is needed.

Module
EZAFTPCK

EZA2659W parm parameter (value) is not numeric. parm ignored.

Explanation
The LOCSITE command was specified with the parm parameter, but the value, value, specified for the parm parameter was not a numeric value.

System action
The parm parameter is ignored.

Operator response
Reissue the command with a valid value. See the z/OS Communications Server: IP User's Guide and Commands or z/OS Communications Server: IP Configuration Guide for information on FTP in general and to z/OS Communications Server: IP User’s Guide and Commands for information on the parameters of the LOCSITE subcommand.

System programmer response
No action is needed.

Module
EZAFTPCK

EZA2660I Workarea allocation failed.
Explanation
The allocation of the workarea for qdisk failed.

System action
FTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
EZAFTPCK

EZA2661W  Restart requires file structure

Explanation
A RESTART command was issued, but the structure is not file structure.

System action
FTP continues.

Operator response
Change the structure to file (issue file or structure f) and reissue the RESTART command.

System programmer response
No action is needed.

Module
EZAFTPCB

EZA2662W  NCP parameter obsolete: Parameter ignored.

Explanation
The NCP parameter is obsolete. It is no longer required because values are computed internally.

System action
FTP continues.

Operator response
None required, the parameter is ignored.

System programmer response
No action is needed.
Module
EZAFTPCK

EZA2663W  parameter not allowed when user not logged in. parameter ignored.

Explanation
The LOCSITE subcommand was issued with the parameter, but the user was not currently logged on to the server with a valid user ID. The user must first log in with a valid user ID and password before issuing the LOCSITE subcommand with the parameter parameter.

System action
FTP continues.

Operator response
Log in to the server using the USER and PASS subcommands, then reissue the LOCSITE subcommand with the parameter parameter.

System programmer response

Module
EZAFTPCK

EZA2664W  CHMod invalid syntax. Specify CHMod mode filename. CHMod ignored.

Explanation
The CHMod parameter of the LOCSITE command was entered incorrectly. The correct syntax of the CHmod parameter of the LOCSITE subcommand is LOCSITE CHMod mode filename where mode is the new permission bit setting for the file, and filename is the name of the file to change.

System action
The CHMod parameter is ignored.

Operator response
Reissue the LOCSITE command with the correct syntax for the CHmod parameter. See the z/OS Communications Server: IP User’s Guide and Commands or z/OS Communications Server: IP Configuration Guide for information on FTP in general and to z/OS Communications Server: IP User’s Guide and Commands for information on the parameters of the LOCSITE subcommand.

System programmer response
No action is needed.

EZA2665W  CHMod invalid filename filename

Explanation
The file name specified by the CHMod parameter of the LOCSITE subcommand was longer than the z/OS UNIX file name maximum of 1023 characters. If the file name operand of the CHMod parameter began with a forward slash (/), then the filename value is the file name operand used “as is”; otherwise, the filename value is the file name operand appended to the current working directory.

filename is the name of the file that is not valid.
System action
The CHMod parameter is ignored.

Operator response
Reissue the LOCSITE command with a valid value specified for the file name on the CHMOD parameter. See the z/OS Communications Server: IP User's Guide and Commands or z/OS Communications Server: IP Configuration Guide for information on FTP in general and to z/OS Communications Server: IP User's Guide and Commands for information on the parameters of the LOCSITE subcommand.

System programmer response
No action is needed.

Module
EZAFTPCK

EZA2667W  CHMod filename is not a valid HFS file. CHMod ignored

Explanation
The file name specified on the CHMod parameter of the LOCSITE subcommand was not an z/OS UNIX file. The CHMod parameter is valid only for z/OS UNIX files.

System action
The CHMod parameter is ignored.

Operator response
Reissue the LOCSITE command with a valid value specified for the file name on the CHMod parameter. See the z/OS Communications Server: IP User's Guide and Commands or z/OS Communications Server: IP Configuration Guide for information on FTP in general and to z/OS Communications Server: IP User's Guide and Commands for information on the parameters of the LOCSITE subcommand.

System programmer response
No action is needed.

Module
EZAFTPCK

EZA2668W  CHMod cannot access file filename: error_description

Explanation
The FTP client encountered an error while attempting to obtain the file information for filename. error_description describes the C runtime library error that was encountered while accessing filename.

System action
The CHMod parameter is ignored.

Operator response
Reissue the LOCSITE command with a valid value specified for the file name on the CHMod parameter. If the problem persists, contact the system programmer.
System programmer response
If necessary, correct the error indicated by error_description.

Module
EZAFTPCK

EZA2669W  CHMod failed: error_description

Explanation
The FTP client encountered an error while attempting to change the permission bits of the file.
error_description describes the C runtime library error that was returned in response to the chmod() request.

System action
The CHMod parameter is ignored.

Operator response
Contact the system programmer.

System programmer response
Correct the error indicated by error_description

Module
EZAFTPCK

EZA2670W  CHMod mode value invalid. Specify mode as a 1-3 digit octal value, or as {u|g|o|a}{=|+|-}{r|w|x|rw|rx|wx|rwx}. CHMod ignored

Explanation
The LOCSITE command was entered with the CHMod parameter, but the mode operand of the CHMod parameter was incorrect. The mode operand specifies the permission bit settings of the file, and should be expressed as either a 1-3 digit octal number (for example, 666 for permission setting rw-rw-rw-), or as a mnemonic indicating the changed bits, (for example a+x to turn on the execute bit for user, group, and other).

System action
The CHMod parameter is ignored.

Operator response
Reenter the LOCSITE subcommand, specifying the correct value for the mode operand. See the z/OS Communications Server: IP User’s Guide and Commands or z/OS Communications Server: IP Configuration Guide for information on FTP in general and to z/OS Communications Server: IP User’s Guide and Commands for information on the parameters of the LOCSITE subcommand.

System programmer response
No action is needed.

Module
EZAFTPCK

EZA2671W  CHMod parameters missing. Specify CHMod mode filename. CHMod ignored
Explanation
The LOCSITE subcommand was entered with the CHMod parameter, but the syntax of the CHMod parameter was incorrect. One or more of the operands required on the CHMod parameter were missing. The syntax of the CHMod parameter is LOCSITE CHMod mode filename.

System action
The CHMod parameter is ignored.

Operator response
Reenter the LOCSITE subcommand, specifying the correct operands. See the z/OS Communications Server: IP User's Guide and Commands or z/OS Communications Server: IP Configuration Guide for information on FTP in general and to z/OS Communications Server: IP User's Guide and Commands for information on the parameters of the LOCSITE subcommand.

System programmer response
No action is needed.

Module
EZAFTPCK

EZA2672W  UMask invalid syntax. Specify UMask umask_value. UMask ignored

Explanation
The LOCSITE command was issued with the UMask parameter, but the syntax of the UMask parameter was incorrect. The correct syntax is LOCSITE UMask umask_value, where umask_value is a 3 character octal number representing file permission bits.

System action
The UMask parameter is ignored. FTP continues.

Operator response
Reissue the LOCSITE command with a valid value for the UMask parameter. See the z/OS Communications Server: IP User's Guide and Commands or z/OS Communications Server: IP Configuration Guide for information on FTP in general and to z/OS Communications Server: IP User's Guide and Commands for information on the parameters of the LOCSITE subcommand.

System programmer response
Assist the user as necessary.

Module
EZAFTPCK

EZA2673I  parameter parameter not allowed when the control connection is not secured

Explanation
You entered an FTP client subcommand during a secure session while the control connection was not secured. The subcommand parameter is not allowed while the control connection is not secured.

In the message text:
The subcommand parameter that is not allowed when the control connection is not secured.

If the subcommand parameter is TLSRFCLEVEL=DRAFT, the user is trying to transition the client to the Internet draft level of RFC 4217, *On Securing FTP with TLS*. However, the Internet draft level of RFC 4217 implemented by z/OS FTP does not support a TLS-secured session with an unsecured control connection.

**System action**
FTP ignores the subcommand parameter.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**User response**
If you are trying to switch the client from using TLSRFCLEVEL=RFC4217 to using TLSRFCLEVEL=DRAFT, use the AUth subcommand with the TLS parameter to secure the control connection, and try switching the client again. See the information about the AUth subcommand in *z/OS Communications Server: IP User's Guide and Commands*.

**Problem determination**
No action is needed.

**Source**
z/OS Communications Server TCP/IP: FTP

**Module**
Not applicable.

**Routing code**
10

**Descriptor code**
12

**Example**

```
Command:  ccc
>>>CCC
200 CCC command successful
locsite TLSRFCLEVEL=DRAFT NOFWFRIENDLY
EZA2673I parameter TLSRFCLEVEL=DRAFT is not allowed when control connection is not secured
```

**Explanation**
The LOCSITE command was issued with the UMask parameter, but the value specified for the UMask parameter was invalid. The value specified for UMask should be a 1 to 3 character octal number representing file permission bits.
**System action**
The UMask parameter is ignored. FTP continues.

**Operator response**
Reissue the LOCSITE command with a valid value for the UMask parameter. See the z/OS Communications Server: IP User’s Guide and Commands or z/OS Communications Server: IP Configuration Guide for information on FTP in general and to z/OS Communications Server: IP User’s Guide and Commands for information on the parameters of the LOCSITE subcommand.

**System programmer response**
Assist the user as necessary.

**Module**
EZAFTPCK

EZA2675W 200-UMask value missing. Specify UMask value as 1 - 3 octal digits

**Explanation**
The LOCSITE command was issued with the UMask parameter, but no value was specified for the UMask parameter. The value specified for UMask should be a 1 to 3 character octal number representing file permission bits.

**System action**
The UMask parameter is ignored. FTP continues.

**Operator response**
Reissue the LOCSITE command with a valid value for the UMask parameter. See the z/OS Communications Server: IP User’s Guide and Commands or z/OS Communications Server: IP Configuration Guide for information on FTP in general and to z/OS Communications Server: IP User’s Guide and Commands for information on the parameters of the LOCSITE subcommand.

**System programmer response**
Assist the user as necessary.

**Module**
EZAFTPCK

EZA2676I Connected to:host, Port:FTP control (21), logged in

**Explanation**
This message is issued in response to the LOCSTAT subcommand. The host is the remote host to which you are connected. The port is the default FTP control port, 21, on the remote host.

**System action**
FTP continues.

**Operator response**
No action is needed.
**System programmer response**
No action is needed.

**Module**
EZAFTPCK

**EZA2677I**  Connected to: host, Port: FTP control (21), not logged in

**Explanation**
This message is issued in response to the LOCSTAT subcommand. The host is the remote host to which you are connected. The port is the default FTP control port, 21, on the remote host.

**System action**
FTP continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
EZAFTPCK

**EZA2689I**  Prompting: prompt, Globbing: glob

**Explanation**
This message is issued in response to the LOCSTAT subcommand. The prompt value indicates whether the PROMPT setting is on or off. On indicates that interactive prompting on multiple commands is on. The glob value indicates whether the GLOB setting is on or off. On indicates that character expansion of local file names is on.

**System action**
FTP continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
EZAFTPCK

**EZA2690I**  Invalid response to prompt. Try again.

**Explanation**
You entered an invalid response to an interactive prompt.
**System action**
FTP continues.

**Operator response**
Enter one of the valid responses that are displayed in the prompt message.

**System programmer response**
No action is needed.

**Module**
EZAFTPCLA

**EZA2691I  Globbing on**

**Explanation**
File-name parameters for the multiple commands (mdelete, mget, and mput) are expanded. That is, the asterisk is used as a wildcard.

**System action**
FTP continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
EZAFTPCL

**EZA2692I  Globbing off**

**Explanation**
File name parameters for the multiple subcommands (mdelete, mget, and mput) are not expanded. That is, the asterisk (*) is not used as a wildcard.

**System action**
FTP continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
EZAFTPCL

**EZA2693I  Interactive mode is on**
**Explanation**

FTP subcommands will prompt for verification before deleting, retrieving, or sending multiple files during the mdelete, mget, and mput subcommands. One of the following four values must be entered for each prompt:

- **Y (Yes)**
  - execute the subcommand
- **N (No)**
  - do not execute the subcommand
- **Q (Quit)**
  - quit processing the subcommand immediately
- **S (Stop prompting)**
  - do not prompt anymore for this subcommand.

**Note:** Pressing the enter key with no value is not a valid response.

**System action**

FTP continues.

**Operator response**

No action is needed.

**System programmer response**

No action is needed.

**Module**

EZAFTPCL

**EZA2694I** Interactive mode is off

**Explanation**

FTP commands will not prompt for verification before deleting, retrieving, or sending multiple files during the mdelete, mget, and mput commands.

**System action**

FTP continues.

**Operator response**

No action is needed.

**System programmer response**

No action is needed.

**Module**

EZAFTPCL

**EZA2695I** Mdelete filename(Yes|No|Quit|Stop prompting)?

**Explanation**

The prompt is displayed for each file before it is deleted when the mdelete subcommand is being processed. 

FILENAME is the name of the file or data set that FTP is about to delete.
You must enter one of the following values before processing continues:

**Y (Yes)**
Delete the file or data set indicated by *filename*. FTP will prompt you with a new file name if it finds another data set or file to delete.

**N (No)**
Do not delete the file or data set indicated by *filename*. FTP will prompt you with a new file name if it finds another data set or file to delete.

**Q (Quit)**
Quit processing the subcommand immediately (do not delete any more files or data sets).

**S (Stop prompting)**
Delete *filename*. Continue deleting data sets or files, but stop prompting before each file or data set deletion.

**Notes:**
1. Only the first character of the entered value is interrogated. That is, entering *yyyyy* has the same effect as entering *yes*.
2. Pressing the enter key with no value is not a valid response.
3. If you do not want to see the prompt the next time you issue the mdelete subcommand, use the prompt subcommand to toggle the interactive mode to off.

**System action**
FTP waits for your reply. The subsequent action depends on how you reply to the prompt.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
EZAFTPCA

---

**EZA2696I** Mget *filename*(Yes|No|Quit|Stop prompting)?

**Explanation**
The prompt is displayed for each file before it is retrieved when the mget subcommand is being processed. *Filename* is the name of the file or data set FTP is about to retrieve.

You must enter one of the following values before processing continues:

**Y (Yes)**
Retrieve *filename*. FTP will prompt you with another *filename* if it finds another file or data set to retrieve.

**N (No)**
Do not retrieve *filename*. FTP will prompt you with another *filename* if it finds another file or data set to retrieve.

**Q (Quit)**
Quit processing the subcommand immediately (do not retrieve any more files or data sets).

**S (Stop prompting)**
Retrieve *filename*. Continue retrieving files or data sets, but do not prompt before retrieving each file.

**Notes:**
1. Only the first character of the entered value is interrogated. That is, entering *yyyyy* has the same effect as entering *yes*.
2. Pressing the enter key with no value is not a valid response.

3. If you do not want to see the prompt the next time you issue the `mget` subcommand, use the `prompt` subcommand to toggle the interactive mode to off.

**System action**

FTP waits for your reply. The subsequent action depends on how you reply to the prompt.

**Operator response**

No action is needed.

**System programmer response**

No action is needed.

**Module**

EZAFTPACA

**EZA2697I** Mput filename(Yes|No|Quit|Stop prompting)?

**Explanation**

The prompt is displayed for each file before it is sent when the `mput` command is being processed.

`filename` is the name of the file or data set that FTP is about to send to the server.

You must enter one of the following values before processing continues:

- **Y (Yes)**
  - Send `filename`. FTP will prompt you with another `filename` if it finds another file or data set to send.

- **N (No)**
  - Do not send `filename`. FTP will prompt you with another `filename` if it finds another file or data set to send.

- **Q (Quit)**
  - Quit processing the subcommand immediately (do not send any more files or data sets).

- **S (Stop prompting)**
  - Send `filename`. Continue sending files or data sets to the server, but do not prompt before sending each file.

**Notes:**

1. Only the first character of the entered value is interrogated. That is, entering `yyyyy` has the same effect as entering `yes`.
2. Pressing the enter key with no value is not a valid response.
3. If you do not want to see the prompt the next time you issue the `mput` subcommand, use the `prompt` subcommand to toggle the interactive mode to off.

**System action**

FTP waits for your reply. The subsequent action depends on how you reply to the prompt.

**Operator response**

No action is needed.

**System programmer response**

No action is needed.

EZAFTPCK

EZA2700I  Proxy connection to: host, Port: FTP control (21), logged in

Explanation
This message is issued in response to the LOCSTAT subcommand. A proxy connection to a remote host exists. The host is the remote host to which you are connected. The port is the default FTP control port, 21, on the remote host. This message is only displayed if a proxy connection exists.
System action
FTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
EZAFTPCK

**EZA2701I**  Connected to: host, Port: FTP control (21), not logged in

Explanation
This message is issued in response to the LOCSTAT subcommand. A proxy connection to a remote host exists. The host is the remote host to which you are connected. The port is the default FTP control port, 21, on the remote host. This message is only displayed if a proxy connection exists.

System action
FTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
EZAFTPCK

**EZA2702I**  Proxy Local Port: port

Explanation
This message is issued in response to the LOCSTAT subcommand. The indicated port is the port number of the local host for the proxy connection. This message is only displayed if a proxy connection exists.

System action
FTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
EZAFTPCK
EZA2703I  Valid proxy commands are:

Explanation
This message is issued in response to the HELP PROXY subcommand. Following it are a list of commands which are valid on the PROXY subcommand.

System action
FTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
EZAFTPCL

EZA2704I  For more information about proxy commands, say 'HELP ALL PROXY'

Explanation
This message provides information about how to request help for PROXY commands using the HELP command. This message is issued in response to a HELP PROXY request.

System action
FTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
EZAFTPCL

EZA2705E  Command not available. Unable to load Japanese translation tables in filename; return code: code

Explanation
The FTP client encountered an error while attempting to load the indicated translation table. Possible return codes are:

1  No storage for the translation table
2  Unable to find the translation table header
3  Error reading the file
System action
FTP continues.

Operator response
Notify the system programmer of the error.

System programmer response
Respond as indicated by the return code displayed in the message.

Module
EZAFTPNC

EZA2706E Command not available. Unable to access Japanese translation tables.

Explanation
The FTP client cannot open the indicated translation table.

System action
FTP continues.

Operator response
Notify the system programmer of the error.

System programmer response
Make sure that the translation table is properly specified and loaded in storage accessible to the FTP client.

Module
EZAFTPNC

EZA2707E Command not available. Unable to load Korean translation tables in filename; return code: code

Explanation
The FTP client encountered an error while attempting to load the indicated translation table. Possible return codes are:

1  No storage for the translation table
2  Unable to find the translation table header
3  Error reading the file

System action
FTP continues.

Operator response
Notify the system programmer of the error.
System programmer response
Respond as indicated by the return code displayed in the message.

Module
EZAFTPNC

EZA2708E Command not available. Unable to access Korean translation tables.

Explanation
The FTP client cannot open the indicated translation table.

System action
FTP continues.

Operator response
Notify the system programmer of the error.

System programmer response
Make sure that the translation table is properly specified and loaded in storage accessible to the FTP client.

Module
EZAFTPNC

EZA2709E Command not available. Unable to load traditional Chinese translation tables in filename; return code: code

Explanation
The FTP client encountered an error while attempting to load the indicated translation table. Possible return codes are:

1. No storage for the translation table
2. Unable to find the translation table header
3. Error reading the file

System action
FTP continues.

Operator response
Notify the system programmer of the error.

System programmer response
Respond as indicated by the return code displayed in the message.

Module
EZAFTPNC

EZA2710E Command not available. Unable to access traditional Chinese translation tables.
**Explanation**
The FTP client cannot open the indicated translation table.

**System action**
FTP continues.

**Operator response**
Notify the system programmer of the error.

**System programmer response**
Make sure that the translation table is properly specified and loaded in storage accessible to the FTP client.

**Module**
EZAFTPNC

---

**EZA2711E**  
Command not available. Unable to load simplified Chinese translation tables in `filename`; return code: `code`

**Explanation**
The FTP client encountered an error while attempting to load the indicated translation table. Possible return codes are:

1. No storage for the translation table
2. Unable to find the translation table header
3. Error reading the file

**System action**
FTP continues.

**Operator response**
Notify the system programmer of the error.

**System programmer response**
Respond as indicated by the return code displayed in the message.

**Module**
EZAFTPNC

---

**EZA2712E**  
Command not available. Unable to access simplified Chinese translation tables.

**Explanation**
The FTP client cannot open the indicated translation table.

**System action**
FTP continues.
Operator response
Notify the system programmer of the error.

System programmer response
Make sure that the translation table is properly specified and loaded in storage accessible to the FTP client.

Module
EZAFTPNCEZA2713I Language: name characteristics

Explanation
This message is issued in response to the LOCSTAT subcommand when the FTP data transfer type is 'B' (DBCS). It displays the name of the particular DBCS data type, followed by any SO/SI characteristics that were specified when this data type was specified.

System action
FTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
EZAFTPCEZA2714I Proxy Command:

Explanation
The system is prompting you to enter a proxy command.

System action
The system waits for you to enter a proxy command.

Operator response
Enter the command you want to process.

System programmer response
No action is needed.

Module
EZAFTPPCEZA2715I No primary connection
**Explanation**
You entered a proxy command that requires both a primary and a secondary connection. The OPEN subcommand must be issued to establish a connection to the primary FTP server.

**System action**
FTP continues.

**Operator response**
Issue the OPEN subcommand with a host name.

**System programmer response**
No action is needed.

---

**Module**
EZAFTPCA, EZAFTPCG, EZAFTPCP

**EZA2716I  Replace option is invalid for a proxy command**

**Explanation**
You entered a proxy get or mget command with the replace option. The option is not supported.

**System action**
FTP continues.

**Operator response**
Issue the command without replace.

**System programmer response**
No action is needed.

---

**Module**
EZAFTPCA, EZAFTPCG

**EZA2717E  PROXY and NOTYPE are conflicting specifications.**

**Explanation**
You entered a proxy command with the notype option. A proxy command is normally sent to the secondary server but the notype option indicates the corresponding type command should not be sent to the server.

**System action**
The command is ignored. FTP continues.

**Operator response**
Issue the command without notype, or not as a proxy command.

**Operator response**
If you intended the command for the secondary server, reissue the command without the notype option. If you intended this command for the client only, reissue it without specifying proxy.
System programmer response
No action is needed.

Module
EZAFTPCT

EZA2718I ASA control characters transferred as C control character sequences

Explanation
This message is issued in response to the LOCSTAT subcommand. ASA control characters in ASA files opened for text processing will be converted to C control character sequences during file transfer.

System action
FTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
EZAFTPCK

EZA2719I ASA control characters transferred as ASA control characters

Explanation
This message is issued in response to the LOCSTAT subcommand. ASA control characters in ASA files opened for text processing will be transferred as ASA control characters.

System action
FTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
EZAFTPCK

EZA2720I New data sets catalogued if a store operation terminates abnormally

Explanation
This message is issued in response to the LOCSTAT subcommand. New data sets will be cataloged if a store operation terminates abnormally.
System action
FTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
EZAFTPCK

EZA2721I  New data sets deleted if a store operation terminates abnormally

Explanation
This message is issued in response to the LOCSTAT subcommand. New data sets will be deleted if a store operation terminates abnormally.

System action
FTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
EZAFTPCK

EZA2722I  Single quotes will override the current working directory

Explanation
This message is issued in response to the LOCSTAT subcommand. Single quotes will override the current working directory.

System action
FTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
EZAFTPCK

EZA2723I  Single quotes will be treated as part of the filename
Explanation
This message is issued in response to the LOCSTAT subcommand. Single quotes will be treated as part of the file name.

System action
FTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
EZAFTPCK

EZA2724I   UMASK value is umask

Explanation
This message is issued in response to the LOCSTAT subcommand. Specifies the octal umask to be used when allocating new z/OS UNIX files.

System action
FTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
EZAFTPCK

EZA2734W   Sbdataconn invalid syntax. Specify SBDATACONN=(value1,value2) or SBDATACONN=dsn. SBDATACONN ignored.

Explanation
A LOCSITE subcommand has been entered with a SBDATACONN parameter that has incorrect syntax. The SBDATACONN parameter must be either a pair of code set names (the first must be an EBCDIC code set name, and the second must be an ASCII code set name), or the fully qualified name of an MVS data set or z/OS UNIX file containing translate tables generated by the CONVXLAT utility.

System action
FTP continues.

Operator response
Resubmit the LOCSITE subcommand with corrected syntax.
System programmer response
No action is needed.

Module
EZAFTPCK

EZA2735W  Sbdataconn parameter is too long. Maximum length for code page name is length. SBDATACONN ignored.

Explanation
A LOCSITE subcommand has been entered with an SBDATACONN parameter specifying an invalid code page name. The SBDATACONN parameter is ignored.

System action
FTP continues.

Operator response
See the z/OS XL C/C++ Programming Guide for information on supported code set converters and valid code set names. Resubmit the corrected LOCSITE subcommand.

System programmer response
No action is needed.

Module
EZAFTPCK

EZA2736W  No conversion available between parm1 and parm2. SBDATACONN ignored.

Explanation
A LOCSITE subcommand has been entered with an SBDATACONN parameter, but there is no supported code set converter for the code sets parm1 and parm2. The SBDATACONN parameter is ignored.

System action
FTP continues.

Operator response
See the z/OS XL C/C++ Programming Guide for information on supported code set converters and valid code set names. Resubmit the corrected LOCSITE subcommand, with the EBCDIC code set name as the first SBDATACONN value, followed by the ASCII code set name.

System programmer response
No action is needed.

Module
EZAFTPCK

EZA2737W  Unable to set up conversion between parm1 and parm2. SBDATACONN ignored.
Explanation
A LOCSITE subcommand has been entered with an SBDATACONN parameter. A code set convertor was successfully opened, but FTP was unable to set up single-byte translate tables using the requested code sets. The SBDATACONN parameter is ignored.

System action
FTP continues.

Operator response
Ensure that the requested code set names are for single-byte code pages. SBDATACONN is not supported for double-byte. See the z/OS XL C/C++ Programming Guide for information on supported code set converters and valid code set names.

System programmer response
No action is needed.

Module
EZAFTPCK

EZA2738W  Translate file '{file}' not found. SBDATACONN ignored.

Explanation
A LOCSITE subcommand has been entered with an SBDATACONN parameter that specified a file name, but FTP was unable open file. The SBDATACONN parameter is ignored.

System action
FTP continues.

Operator response
Ensure that the file name specified on the SBDATACONN parameter is a fully qualified name of an existing MVS data set or z/OS UNIX file.

System programmer response
If the file name is correct, use the FTP client's debug facility to determine why FTP cannot open the file.

Module
EZAFTPCK

EZA2739W  Translate file '{file}' invalid. SBDATACONN ignored.

Explanation
A LOCSITE subcommand has been entered with an SBDATACONN parameter that specified a file name, but FTP encountered an error while trying to load its translate tables using file. Possible errors include an invalid header record or incorrect file length. (The file must contain exactly 768 bytes of data.) The SBDATACONN parameter is ignored.

System action
FTP continues.
**Operator response**
Ensure that the file name specified is correct. It must be a fully qualified name, and the file must contain translate tables in the format generated by the CONVXLAT utility.

**System programmer response**
Use the client's debug facility to help determine why the file cannot be used.

**Module**
EZAFTPCK

**EZA2740E** SQL query not available. Can't load CAF routines.

**Explanation**
FTP was unable to load the CAF (Call Access Facility) modules it uses to provide support for SQL queries.

**System action**
The command is rejected. FTP continues.

**Operator response**
If FTP SQL support is required, ensure that the appropriate DSNLOAD library is included in the STEPLIB for the FTP client. (If FTP is started from the UNIX shell, the STEPLIB environment variable must be set.) Restart the FTP client session.

If FTP SQL support was not intended, issue a `locsite filetype=` command to change the file type from its current setting of SQL to SEQ.

**System programmer response**
Ensure that the appropriate DSNLOAD library is accessible.

**Module**
EZAFTPMQ

**EZA2741W** Ctrlconn invalid syntax. Specify CTRLCONN=ascii_code_page_name or CTRLCONN=7BIT. CNTRLCONN ignored.

**Explanation**
A LOCSITE subcommand has been entered with a CTRLCONN parameter whose value begins with '(' . The syntax for the CTRLCONN parameter does not use parentheses. The CTRLCONN parameter is ignored.

**System action**
FTP continues.

**Operator response**
Reenter the LOCSITE command with corrected syntax.

**System programmer response**
No action is needed.
EZA2742W  parameter=operand ignored. Requested conversion is not supported.

Explanation
A CTRLCONN parameter was entered on a LOCSITE subcommand, but there is no conversion available between the FTP client's code page and operand. The CTRLCONN parameter is ignored. The translate tables for the control connection are not changed.

System action
FTP continues.

Operator response
Reissue the LOCSITE command, specifying either "7bit" or the name of an ASCII code page supported by iconv. See the z/OS XL C/C++ Programming Guide for a list of the code pages supported by iconv. The code page name must be entered exactly as shown in the list (for example: IBM-850 or ISO8859-1).

System programmer response
None

Module
EZAFTPCK

EZA2743W  keyword=value ignored. Unable to set up requested conversion.

Explanation
A CTRLCONN parameter was entered on a LOCSITE subcommand, but FTP was unable to build the single-byte translate tables for the control connection. The CTRLCONN parameter is ignored. The translate tables for the control connection are not changed.

Note: If the FTP client is running in a double-byte environment, the CTRLCONN parameter cannot be used to change the translate tables for the control connection.

System action
FTP continues.

Operator response
No action is needed.

System programmer response
If the FTP client is running in a double-byte code set, the CTRLCONN parameter is not supported. The tables used for the control connection are set at client initialization from either a TCPXLBIN file, or from FTP's internal default single-byte tables.

If the client is running in a single-byte environment, an internal error has occurred. If this occurs repeatedly, contact the IBM Support Center with an FTP trace.

Module
EZAFTPCK

EZA2744W  parameter parameter already specified. "parameter=value" ignored.
**Explanation**

*parameter* parameter was already specified on the LOCSITE command. This parameter can only be issued once per LOCSITE command. All occurrences of the parameter after the first occurrence are ignored.

**System action**

*parameter* is set to the value specified the first time the parameter was encountered. The *value* specified for this occurrence of *parameter* is ignored.

**Operator response**

If you want to change the parameter value to the value specified by *parameter=value*, reissue the LOCSITE command with *parameter=value* as the only occurrence of the parameter on the LOCSITE command.

**System programmer response**

No action is needed.

**Module**

EZAFTPCK

**EZA2745I** Error trying to delete the new file.

**Explanation**

FTP attempted to delete the new file that was created but the delete failed. One possible reason for a delete failure is that the data set has an unexpired retention period.

**System action**

No action is needed.

**Operator response**

The data set can be deleted with the data set utilities of the operating system.

**System programmer response**

No action is needed.

**Module**

EZAFTPCG

**EZA2746E** A qualifier in *name* begins with an invalid character.

**Explanation**

You entered a subcommand with *name* as a parameter. A data set qualifier specified in *name* begins with an invalid character.

**System action**

No action is needed.

**Operator response**

Reissue the subcommand with a valid data set name.
System programmer response
No action is needed.

Module
EZAFTPGU

**EZA2747E** A qualifier in *name* is more than 8 characters.

Explanation
A data set qualifier specified on the LCD or LMKDIR command is longer than 8 characters.

System action
No action is needed.

Operator response
Reissue the command with a valid data set name.

System programmer response
No action is needed.

Module
EZAFTPGU

**EZA2748E** A qualifier in *name* contains an invalid character.

Explanation
A data set qualifier specified on the current subcommand contains an invalid character.

System action
FTP rejects the subcommand. Processing continues.

Operator response
Reissue the subcommand with a valid data set name.

System programmer response
No action is needed.

Module
EZAFTPGU

**EZA2749E** Cannot establish conversion between *codeset* and UCS-2.

Explanation
While processing the FTP.DATA file, the value for the UCSHOSTCS parameter was not a valid code set name. An attempt to set up a conversion table between *codeset* and UCS-2 failed.

System action
The line containing the error is ignored. Processing of the FTP.DATA file continues with the next line in the file.
Operator response
Contact the System programmer with the error message to have the FTP.DATA file corrected.

System programmer response
Correct the FTP.DATA file to contain the correct code set for UCSHORTCS. See the z/OS Communications Server: IP Configuration Reference for information on the parameters of the FTP.DATA file.

Module
EZAFTPCT, EZAFTPEP

EZA2756W Unable to setup conversion between UCS-2 and codeset. UCSHOSTCS ignored.

Explanation
A conversion between the codeset specified on the LOCSITE UCSHOSTCS command and UCS-2 could not be completed.

System action
The UCSHOSTCS parameter on the LOCSITE command is ignored. FTP continues.

Operator response
Reissue the LOCSITE command with a valid code set name.

System programmer response
No action is needed.

Module
EZAFTPCK

EZA2757I Host code set for TYPE U transfer code_set

Explanation
This message is issued in response to the LOCSTAT subcommand when the FTP data transfer type is 'U' (UCS-2). It displays the name of the EBCDIC code set used for EBCDIC to UCS-2 conversion and UCS-2 to EBCDIC conversion.

System action
FTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
EZAFTPCK

EZA2773E TYPE U transfer is not supported in mode mode
**Explanation**
FTP has retrieved or sent an UCS-2 file (or data set) but the current mode is not set to Stream. Stream mode is required for UCS-2 data.

**System action**
The GET or PUT subcommand is rejected.

**Operator response**
Change the mode to stream using the STREAM command.

**System programmer response**
No action is needed.

**Module**
EZAFTPCG, EZAFTPCP

**EZA2774E** TYPE U transfer is only supported in stream mode

**Explanation**
To transfer a UCS-2 file, stream mode must be used. See EZA2773E for more information.

**System action**
FTP continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
EZAFTPCG, EZAFTPCP

**EZA2775E** Record structure is not supported for TYPE U transfer

**Explanation**
FTP has retrieved or sent an UCS-2 file (or data set) but the current structure is set to Record. File structure is required for UCS-2 data.

**System action**
The GET or PUT command is rejected.

**Operator response**
Change the structure to FILE using the STRUCT=F command.

**System programmer response**
No action is needed.
**Module**

EZAFTPCG, EZAFTPCP

**EZA2776E**  TYPE U transfer is not supported for filetype type

**Explanation**

FTP has retrieved or sent an UCS-2 file (or data set) but the current file type is not set to SEQ. Sequential file is required for UCS-2 data. JES or SQL files cannot be transferred as UCS-2 data.

**System action**

The GET or PUT command is rejected.

**Operator response**

If the file is not JES or SQL, change the file type to SEQ using the LOCSITE FILETYPE=SEQ command.

**System programmer response**

No action is needed.

---

**Module**

EZAFTPCG, EZAFTPCP

**EZA2777I**  TYPE U transfer is only supported for filetype SEQ

**Explanation**

An UCS-2 transfer failed because the file type was not sequential. See EZA2776E for more information.

**System action**

FTP continues.

**Operator response**

None

**System programmer response**

None

---

**Module**

EZAFTPCG, EZAFTPCP

**EZA2778E**  Transfer of RDWs is not supported for TYPE U. Use 'LOCSITE NORDW'

**Explanation**

FTP has sent an UCS-2 file (or data set) and RDWs is currently ON. RDWs must be off when sending UCS-2 data.

**System action**

The PUT command is rejected.

**Operator response**

Turn RDWs off using the LOCSITE NORDW command.
**System programmer response**
No action is needed.

**Module**
EZAFTPCP

**EZA2779E** Transfer of trailing blanks is not supported for TYPE U. Use 'LOCSITE NOTRAILINGBLANKS'

**Explanation**
FTP has sent an UCS-2 file (or data set) and TRAILINGBLANKS is currently ON. TRAILINGBLANKS must be off when sending UCS-2 data.

**System action**
The PUT command is rejected.

**Operator response**
Turn TRAILINGBLANKS off using the LOCSITE NOTRAILINGBLANKS command.

**System programmer response**
No action is needed.

**Module**
EZAFTPCP

**EZA2780E** NOASATRANS is not supported for TYPE U. Use 'LOCSITE ASATRANS'

**Explanation**
FTP has retrieved or sent an UCS-2 file (or data set) and ASATRANS is currently set to OFF. ASATRANS must be ON when storing UCS-2 data in EBCDIC format into an ASA data set.

**System action**
The GET or PUT command is rejected.

**Operator response**
Turn ASATRANS on using the LOCSITE ASATRANS command.

**System programmer response**
No action is needed.

**Module**
EZAFTPCG, EZAFTPCP

**EZA2781E** Transfer aborted: conversion failure

**Explanation**
FTP has retrieved or sent an UCS-2 file (or data set), but was unable to convert it to/from EBCDIC.

**System action**
The GET or PUT command is rejected.
Operator response
Turn on debug and issue GET or PUT again. Give the output to the system programmer.

System programmer response
Check the debug messages to determine the errno and errnojr being returned from the iconv system call.

Module
EZAFTPCG, EZAFTPCP

EZA2782E Transfer aborted: substitution occurred for TYPE U transfer

Explanation
FTP has retrieved or sent an UCS-2 file (or data set) that contained a UCS-2 character that could not be converted to EBCDIC. The EBCDIC substitution character would need to be used to convert the UCS-2 character.

System action
The GET or PUT command is rejected.

Operator response
To allow the file to be stored in EBCDIC, substitution must be allowed. Issue LOCSITE UCSSUB to turn ON UCS-2 substitution.

System programmer response
No action is needed.

Module
EZAFTPCG, EZAFTPCP

EZA2783E Transfer aborted: uneven number of bytes received for TYPE U transfer

Explanation
FTP has retrieved or sent an UCS-2 file (or data set) that contained an uneven number of bytes.

System action
The GET or PUT command is rejected.

Operator response
No action is needed.

System programmer response
Make sure the UCS-2 file is not corrupt. By definition UCS-2 is double byte, which should result in the file length being an even number of bytes.

Module
EZAFTPCG

EZA2784I Conversion from Unicode to EBCDIC resulted in number substitutions.
Explanation
FTP has received a Unicode file. Some characters were replaced with the EBCDIC substitution character.

System action
FTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
EZAFTPCG, EZAFTPCP

EZA2785E WRAPRECORD is not supported for TYPE U. Use 'LOCSITE NOWRAPRECORD'

Explanation
FTP has retrieved an UCS-2 file (or data set) and WRAPRECORD is currently ON. WRAPRECORD must be off when storing UCS-2 data in EBCDIC format.

System action
The GET command is rejected.

Operator response
Turn WRAPRECORD off using the LOCSITE NOWRAPRECORD command.

System programmer response
No action is needed.

Module
EZAFTPCG

EZA2786E TYPE U transfer requires variable format data set

Explanation
FTP has retrieved an UCS-2 file (or data set) but the target data set is not variable format.

System action
The GET command is rejected.

Operator response
Change the target data set to a variable format data set.

System programmer response
No action is needed.
Module
EZAFTPCG

EZA2787E Transfer aborted: truncation occurred for TYPE U transfer

Explanation
FTP has retrieved an UCS-2 file (or data set) and converted it to EBCDIC. Some of the records were truncated. Also UCSTRUNC is currently set to NO.

System action
The GET command is rejected.

Operator response
Either set UCSTRUNC to YES using the LOCSITE UCSTRUNC command, or increase the logical record length of the retrieved file.

System programmer response
No action is needed.

Module
EZAFTPCG

EZA2788I Command ! may only be issued when the client is running in the z/OS UNIX shell.

Explanation
This message is issued when the ! subcommand was issued while not under the z/OS UNIX System Services shell. The ! subcommand is not supported in a batch, EXEC, TSO, or Callable API environment.

System action
FTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
EZAFTPCL

EZA2789E DSORG=DA requires structure: FILE, mode: STREAM, and transfer type: IMAGE.

Explanation
A PUT command was issued for a DSORG=DA data set, but one or more of the following conditions are not met: FILE structure, STREAM mode, and IMAGE transfer type.

System action
FTP continues.
Operator response
If you intend to transfer a DSORG=DA file, use the LOCSTAT command to display the current status for the FTP client. Then use the STRUCT F, MODE S, and/or TYPE I commands as required.

System programmer response
No action is needed.

Module
EZAFTPCP

EZA2790E  LRECL X valid only for RECFM of U or variable length spanned.

Explanation
The LOCSITE command was issued with LRECL=X, but the record format is not U or variable length spanned.

System action
FTP continues.

Operator response
If you intend to set LRECL=X, use the LOCSITE command to set the record format to U or variable length spanned.

System programmer response
No action is needed.

Module
EZAFTPCCK

EZA2791I  LRECL being reset to lrecl.

Explanation
The LOCSITE command was issued with LRECL=X, but the record format is not U or variable length spanned. LRECL is being reset to the previous value or 256 if the previous value was invalid.

System action
FTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
EZAFTPCCK

EZA2792I  LRECL being reset to site default of 'not used'.
Explanation
The LOCSITE command was issued with LRECL=X, but the record format is not U or variable length spanned. LRECL is being reset to the default value of 'not used'.

System action
FTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
EZAFTPCK

EZA2793I  UCS Substitution: ucssub, UCS Truncation: ucstrunc

Explanation
This message is issued in response to the LOCSTAT subcommand if the transfer type is UCS-2. The ucssub value indicates whether substitution is allowed when converting between UCS-2 and EBCDIC. The ucstrunc value indicates whether truncation is allowed when converting between UCS-2 and EBCDIC.

System action
FTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
EZAFTPCK

EZA2794I  Both CCTRANS and CTRLCONN were specified. Using CTRLCONN. CCTRANS will be ignored.

Explanation
The FTP client has encountered both CCTRANS and CTRLCONN keywords in FTP.DATA. The CCTRANS keyword is supported only to aid migration; the CTRLCONN keyword is the preferred keyword. When both keywords are present in FTP.DATA, the CTRLCONN value will be used for the client configuration and the CCTRANS value will be ignored.

System action
FTP continues.

Operator response
No action is needed.
System programmer response
To avoid this message, remove the CCTRANS statement from the FTP.DATA file.

Module
EZAFTPEP

EZA2795I Both SBTRANS and SBDATACONN were specified. Using SBDATACONN. SBTRANS will be ignored.

Explanation
The FTP client has encountered both SBTRANS and SBDATACONN keywords in FTP.DATA. The SBTRANS keyword is supported only to aid migration; the SBDATACONN keyword is the preferred keyword. When both keywords are present in FTP.DATA, the SBDATACONN value will be used for the client configuration and the SBTRANS value will be ignored.

System action
FTP continues.

Operator response
No action is needed.

System programmer response
To avoid this message, remove the SBTRANS statement from the FTP.DATA file.

Module
EZAFTPEP

EZA2798I Byte Order: byte_order

Explanation
This message is issued in response to the LOCSTAT subcommand if the transfer type is UCS-2. The byte_order indicates whether the UCS-2 files sent by the client are encoded using big-endian or little-endian.

System action
FTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
EZAFTPCK

EZA2799W The data set is allocated to another job and is unavailable.

Explanation
The client was unable to allocate the data set because it is already allocated to another job.
**System action**
No action is needed.

**Operator response**
Try again later.

**System programmer response**
No action is needed.

**Module**
EZAFTPCP, EZAFTPCG

**EZA2801I**  Data not wrapped into next record.

**Explanation**
Data that does not fit within the target record will be truncated.

**System action**
FTP continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
EZAFTPCK

**EZA2802I**  Data was truncated.

**Explanation**
A data transfer has completed, but FTP was not able to store all the data because the logical record size for the receiving data set was not large enough. Some data has been lost.

**System action**
FTP continues.

**Operator response**
If truncation is not acceptable, redo the data transfer to an existing data set that has a larger record size, or you can use the LOCSITE LRECL parameter to specify a particular record size that is larger and redo the data transfer to a new data set.

**System programmer response**
No action is needed.

**Module**
EZAFTPCG
**EZA2803I**  Lines were wrapped.

**Explanation**  
A data transfer has completed. One or more lines of data were longer than the record size of the receiving data set; those lines were continued in the next record.

**System action**  
FTP continues.

**Operator response**  
No action is needed.

**System programmer response**  
No action is needed.

**Module**  
EZAFTPCK

---

**EZA2804W**  Data set is out of space.

**Explanation**  
A data transfer has failed because there is not enough space in the data set.

**System action**  
FTP continues.

**Operator response**  
See message EZA2805W for the system completion code and reason code and take actions appropriate for the failure.

**System programmer response**  
No action is needed.

**Module**  
EZAFTPCG

---

**EZA2805W**  System completion code and reason: cc-rc

**Explanation**  
A file I/O operation failed with the system completion code cc and the reason code rc.

cc-rc is the hexadecimal system completion code and the return code. See the z/OS MVS System Codes for the descriptions of the system completion codes. Return codes are described as part of the system completion codes.

**System action**  
FTP continues.
Operator response
See the z/OS MVS System Codes publication for suggested actions for the specified failure code.

System programmer response
No action is needed.

Module
EZAFTPCG, EZAFTPCP

EZA2806I  DBCS conversion to EBCDIC encountered invalid input (number errors)

Explanation
The FTP client encountered input errors during conversion of type B data.

System action
FTP continues.

Operator response
For more specific information about the errors, issue the DEBUG subcommand and then reissue the GET subcommand. Check the source data and correct any errors. If you are creating a pure DBCS local file, ensure that the source data does not contain any single-byte data. Resubmit the data transfer.

System programmer response
No action is needed.

Module
EZAFTPCG

EZA2807I  Executing under single stack configuration. Specified TCPIP name tcpipname ignored.

Explanation
The FTP client was started with the -p or (TCP start parameter that specified TCPIP stack tcpipname was to be used. The client is running in an INET (single-stack) configuration and this start parameter applies only to a CINET (multi-stack) configuration.

System action
The parameter is ignored. FTP client continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
EZAFTPCY

EZA2808W  File has unsupported DSORG.
Requested file has a DSORG that is not supported by FTP.

The file transfer request is terminated. FTP continues.

Check DSORG for the file.

No action is needed.

CCONNTIME is the amount of time to wait after attempting to close a control connection before terminating the control connection and reporting an error.

FTP continues.

No action is needed.

DATACTTIME is the amount of time to wait after attempting to send or receive data before terminating the data connection and reporting an error to the user.

FTP continues.

No action is needed.
Module
EZAFTPCL

EZA2811I  DCONNTIME is dconntime

Explanation
DCONNTIME is the amount of time to wait after attempting to close a data transfer connection before
terminating the data connection and reporting an error.

System action
FTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
EZAFTPCL

EZA2812I  INACTTIME is inacttime

Explanation
INACTTIME is the amount of time to wait for an expected response from the server, on either the control or the
data connection, before closing the session.

System action
FTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
EZAFTPCL

EZA2813I  MYOPENTIME is myopentime

Explanation
MYOPENTIME is the amount of time to wait for a session to open before terminating the attempt and reporting
an error.

System action
FTP continues.
Operator response
No action is needed.

System programmer response
No action is needed.

**Module**
EZAFTPCL

**EZA2814I**  UCOUNT is ucount

**Explanation**
UCOUNT is the unit count for new allocations.

**System action**
FTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

**Module**
EZAFTPCL

**EZA2815I**  VCOUNT is vcount

**Explanation**
VCOUNT is the volume count for new allocations.

**System action**
FTP continues.

Operator response
No action is needed.

System programmer response
EZAFTPCL

**Module**
No action is needed.

**EZA2816I**  No automatic mount of tape volumes.

**Explanation**
NOAUTOMOUNT was specified. NOAUTOMOUNT is the default value.
System action
FTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
EZAFTPCL

EZA2817I Automatic mount of tape volumes.

Explanation
AUTOMOUNT was specified.

System action
FTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
EZAFTPCL

EZA2818I Data connections for the client are firewall friendly.

Explanation
This message is issued in response to the LOCSTAT subcommand. It indicates that when a data connection is set up, the client will be the active end of the data connection and therefore firewall friendly.

System action
FTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
EZAFTPCL

EZA2819I Data connections for the client are not firewall friendly.
Explanation
This message is issued in response to the LOCSTAT subcommand. It indicates that when a data connection is set up, the client will be the passive end of the data connection and therefore not firewall friendly.

System action
FTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
EZAFTPCL

EZA2822W  NOFWFriendly already specified. FWFriendly ignored.

Explanation
NOFWFriendly was already specified on this LOCSITE command, FWFriendly is ignored.

System action
FTP continues.

Operator response
Specify one option, FWFriendly or NOFWFriendly on the LOCSITE command.

System programmer response
No action is needed.

Module
EZAFTPCK

EZA2823W  FWFriendly already specified. NOFWFriendly ignored.

Explanation
FWFriendly was already specified on this LOCSITE command, NOFWFriendly is ignored.

System action
FTP continues.

Operator response
Specify one option, FWFriendly or NOFWFriendly on the LOCSITE command.

System programmer response
No action is needed.
**Module**
EZAFTPCK

**EZA2824W**  Open of *filename* failed due to incorrect BLKSIZE or LRECL. Use SITE LRECL or BLKSIZE

**Explanation**
An incorrect block size or logical record length was specified for the file.

*filename* is the name of the file that could not be opened.

**System action**
The requested operation is ended. FTP continues.

**Operator response**
Override the incorrect BLKSIZE/LRECL by issuing a SITE command with the correct settings.

**System programmer response**
No action is needed.

**Module**
EZAFTPCP

**Procedure name**
sndf

**EZA2825E**  File contains records that are too long to be processed

**Explanation**
The FTP client cannot process the received data because a record delimiter was not found in the data and the FTP client is not configured to wrap records. The FTP client expects to find a record delimiter, such as a Carriage Return and Line Feed (CRLF) in ASCII mode or a Newline(NL) in EBCDIC mode, to denote the end of a record.

**System action**
The file is not transferred.

**Operator response**
Ensure that the ASCII or EBCDIC file being received has proper delimiters in the data or configure the FTP client to wrap records using the wraprecord parameter. See z/OS Communications Server: IP User's Guide and Commands for information about configuring wraprecord.

**System programmer response**
No action is needed.

**Module**
EZAFTPCG

**Procedure name**
mvs_rcvFile()

**EZA2826E**  Volume=volume_serial_list contains a tape volume.
Explanation

The LMKDIR subcommand was issued to create a new PDS. The LOCSITE VOLUME parameter was in effect, specifying that all new data sets will be allocated on volumes volume_serial_list. One of the volumes in volume_serial_list was determined to be a tape, and partitioned data sets cannot be allocated to tape.

System action

The LMKDIR subcommand is rejected.

Operator response

Issue the LOCSITE VOLUME command to change the volume serial list for new data sets to DASD volumes, then reissue the LMKDIR subcommand. See the z/OS Communications Server: IP User’s Guide and Commands for more information on the LOCSITE subcommand.

System programmer response

No action is needed.

Module
EZAFTPCD

Procedure name
lmkdir()

EZA2827I Error mounting one of these volumes: volume_serial_list.

Explanation

The LMKDIR subcommand was issued to create a new PDS. The LOCSITE VOLUME parameter was in effect, specifying that all new data sets will be allocated on volumes volume_serial_list. FTP was not able to mount one of the volumes in volume_serial_list.

System action

The LMKDIR subcommand is rejected.

Operator response

Ask the operator to mount all volumes required. Reissue the LMKDIR command. If this does not correct the problem, report the error to the system programmer.

System programmer response

Check the MVS console for messages related to the volumes in volume_serial_list. Correct the errors, and reissue LMKDIR.

Module
EZAFTPCD

Procedure name
lmkdir()

EZA2828I Volume=volume_serial_list contains a volume that is not mounted.
Explanation
The LMKDIR subcommand was issued to create a new PDS. The LOCSITE VOLUME parameter was in effect, specifying that all new data sets will be allocated on volumes volume_serial_list. One or more or the volumes in volume_serial_list was not mounted, and NOAUTOMOUNT was in effect. NOAUTOMOUNT prevents automatic mounting of volumes that are not mounted.

System action
The LMKDIR subcommand is rejected.

Operator response
Ask the operator to mount all required volumes, or issue the LOCSITE AUTOMOUNT subcommand to permit automatic mounting of volumes that are not mounted. Reissue the LMKDIR subcommand. See the z/OS Communications Server: IP User's Guide and Commands for more information on the LOCSITE subcommand.

System programmer response
No action is needed.

Module
EZAFTPCD

Procedure name
lmkdir()

EZA2829W UCOUNT value (value) must be P, or an integer from minimum through maximum.

Explanation
The LOCSITE subcommand was issued with the UCOUNT parameter. The value, value, specified for the UCOUNT parameter was not an integer from minimum through maximum, nor was it the letter P.

System action
The UCOUNT parameter is ignored.

Operator response
Reissue the command with a valid value.

System programmer response
No action is needed.

Module
EZAFTPCK

Procedure name
locsite()

EZA2830I Anonymous FTP log in from ipaddr at currenttime - email address: emailaddress

Explanation
An anonymous user logged in and it is written to syslog.
**ipadd** is the IP address of the client logging in to FTP.

**currenttime** is the time the login occurred.

**emailaddress** is what the user entered as his or her email address.

**System action**

FTP continues.

**Operator response**

No action is needed.

**System programmer response**

No action is needed.

**Module**

EZAFTPRA

**EZA2831E** EMAILADDRCHECK value must be NO, WARNING or FAIL

**Explanation**

While processing the FTP.DATA file, the server encountered the EMAILADDRCHECK parameter with a parameter value that was not NO, WARNING or FAIL. The only valid values for the EMAILADDRCHECK parameter are NO, WARNING or FAIL.

**System action**

The line containing the error is ignored. Processing of the FTP.DATA file continues with the next line in the file.

**Operator response**

Contact the System programmer with the error message to have the FTP.DATA file corrected.

**System programmer response**

Correct the FTP.DATA file to contain the correct value for the specified parameter. See the z/OS Communications Server: IP Configuration Reference for information on the parameters of the FTP.DATA file.

**Module**

EZAFTPEP

**EZA2832I** Load module transfer requires FILETYPE = SEQ

**Explanation**

The user has requested a file transfer that might involve load modules and the client’s local file type is not SEQ.

**System action**

Load module transfer processing ends and base processing continues.

**Operator response**

If you want load module transfer processing to be performed, issue a LOCSITE FILETYPE=SEQ subcommand.
**System programmer response**

No action is needed.

**Module**

EZAFTPCC

---

**EZA2833I Load module transfer does not support load module rename**

**Explanation**

The user has requested a file transfer that might involve load modules and has requested that the files be renamed. Load module transfer processing does not support renaming of load modules.

**System action**

Load module transfer processing ends and base processing continues. Any MVS load modules transferred will not be executable on the target system.

**Operator response**

If you want load module transfer processing to be performed, issue a transfer subcommand that does not include a rename of the files.

**System programmer response**

No action is needed.

**Module**

EZAFTPCC

---

**EZA2834I Load module transfer supports member names only**

**Explanation**

The user has requested a file transfer that might involve load modules but has specified either an z/OS UNIX file name or a fully qualified MVS data set name. Load module transfer only supports transfer of members of the PDS or PDSE which is the current working directory.

**System action**

Load module transfer processing ends and base processing continues. Any MVS load modules transferred will not be executable on the target system.

**Operator response**

If you want load module transfer processing to be performed, reissue the transfer subcommand without using quotes or slashes.

**System programmer response**

No action is needed.

**Module**

EZAFTPCC

---

**EZA2835I Load module transfer requires local directory to be PDS or PDSE**
**Explanation**
The user has requested a file transfer that might involve load modules but the current working directory is not a PDS or a PDSE. Load module transfer requires the current working directory to be a PDS or a PDSE.

**System action**
Load module transfer processing ends and base processing continues. Any MVS load modules transferred will not be executable on the target system.

**Operator response**
If you wanted load module transfer processing to be performed, change the local directory to a load library (a PDS or a PDSE with RECFM=U).

**System programmer response**
No action is needed.

**Module**
EZAFTPCC

**EZA2836I No members of the data set match the selection pathnames**

**Explanation**
The user has requested a PUT or MPUT that might involve load modules but the PDS or PDSE current working directory does not contain any members that match the local file name provided.

**System action**
FTP waits for the next subcommand.

**Operator response**
Check the file name specified on the PUT or MPUT subcommand.

**System programmer response**
No action is needed.

**Module**
EZAFTPCC

**EZA2837I Could not build a file list**

**Explanation**
While performing load module transfer, the FTP client was unable to build a list of file names to transfer.

**System action**
Load module transfer processing ends and base processing continues. Any MVS load modules transferred will not be executable on the target system.

**Operator response**
No action is needed.
**System programmer response**
Verify adequate storage available for memory files.

**Module**
EZAFTPCC

**EZA2838I Load module transfer syntax error**

**Explanation**
An unexpected or incorrectly formatted load module transfer response was sent from the FTP server to the FTP client. This is a violation of the load module transfer protocol.

**System action**
Load module transfer processing is ended and the file transfer is completed using base processing. Any MVS load modules transferred will not be executable on the target system.

**Operator response**
Contact the system programmer.

**System programmer response**
Ensure that the server and client are both at a supported level of Communications Server. If not, contact the vendor of the non-IBM FTP program for service.

**Module**
EZAFTPCC

**EZA2839I Reload of the load library failed**

**Explanation**
While processing a GET or MGET command for one or more load modules, the client failed to reload the unloaded load module from the temporary data set into the load library.

**System action**
The transfer is ended, and no files will be transferred. FTP waits for the next subcommand.

**Operator response**
Contact the system programmer.

**System programmer response**
Verify that sufficient free space exists in the load library to receive the load modules. Look for console messages from the file system or the IEBCOPY system utility. If none were provided, get an FTP client trace of the operation.

**Module**
EZAFTPCC

**EZA2840I Unload of the load library failed**
**Explanation**

While processing a PUT or MPUT command for one or more load modules, the client failed to unload the load module from the load library into a temporary data set.

**System action**

The transfer is ended, and no files will be transferred. FTP waits for the next subcommand.

**Operator response**

Contact the system programmer.

**System programmer response**

Verify sufficient free space exists in the file system for a temporary file to hold the unloaded load modules. Look for console messages from the file system or the IEBCOPY utility. If none were provided, get an FTP client trace of the operation.

**Module**

EZAFTPCC

**EZA2841I Local directory might be a load library**

**Explanation**

As a result of the LCD subcommand, the FTP client local directory is a PDS or a PDSE with RECFM=U. This might be a load library, and load module transfer processing might be attempted for this directory.

**System action**

FTP continues.

**Operator response**

No action is needed.

**System programmer response**

No action is needed.

**Module**

EZAFTPCD

**EZA2842I System service invoked for load module transfer failed: IEBCOPY rc=rc**

**Explanation**

While performing a load module transfer, the client invoked the IEBCOPY system utility to unload load modules into a temporary data set (for PUT or MPUT) or to reload unloaded load modules from temporary data set into the target load library (for GET or MGET). IEBCOPY failed.

\( rc \) is the decimal return code provided by IEBCOPY. IEBCOPY return codes are documented in z/OS DFSMSdfp Utilities.

**System action**

Load module transfer ends. No files will be transferred. The FTP client waits for the next subcommand.
Operator response
Contact the system programmer

System programmer response
Use the z/OS DFSMSdfp Utilities manual to determine the corrective action for the IEBCOPY return code.

Module
EZAFTPMD

EZA2843E Incorrect format data set name dsn

Explanation
The FTP server was parsing keywords in the FTP.DATA file. The data set name specified, dsn, was not a valid MVS data set name. The keyword is ignored. The FTP server continues with the next keyword.

System action
FTP continues.

Operator response
Notify the system programmer of the error.

System programmer response
Correct the data set name in the FTP.DATA file. See the z/OS Communications Server: IP Configuration Reference for information on the parameters of the FTP.DATA file.

Module
EZAFTPEP

EZA2844I ISPFSTAT is set to ispfstat

Explanation
ISPFSTAT can be set to either TRUE or FALSE. When ISPFSTAT is set to TRUE, ISPF Statistics of a PDS member that has been transferred to the FTP client will be updated or created. The default setting is FALSE.

ispfstat is either TRUE or FALSE.

System action
FTP Continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
EZAFTPCL
** Procedure name  
locstat()

**EZ2845I** Statistics have been updated for the PDS member that was transferred

**Explanation**  
Statistics had to be updated for the PDS member that was transferred because the PDS member that it replaced had statistics. ISPFSTAT setting of FALSE was ignored.

**System action**  
FTP continues

**Operator response**  
No action is needed.

**System programmer response**  
No action is needed.

**Module**

verbose()

EZA2859I  Message IDs are displayed when running in system UNIX

Explanation
This message is generated after the VERBOSE subcommand to the FTP client. It indicates that VERBOSE mode is toggled on and client messages will be displayed with their message ID numbers. The VERBOSE setting is applicable only when the FTP client is running in a UNIX environment.

system is the name of the operating system (for example, z/OS).

System action
FTP continues.

Operator response
Reissue the VERBOSE subcommand to toggle the setting off, if necessary.

System programmer response
No action is needed.

Module
EZAFTPCL

Procedure name
verbose()

EZA2860I  Secure Hostname is: level
Explanation
This message is issued in response to the LOCSTAT subcommand. It indicates whether host name verification in the server’s certificate is required or optional.

In the message text:

**level**
The setting for the SECURE_HOSTNAME statement in the FTP.DATA file. The possible levels for the secure host name are REQUIRED or OPTIONAL. OPTIONAL is the default.

System action
FTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
ezaftpcl

Procedure name
docstat

EZA2861I Using socks_configuration_file for SOCKS server configuration

Explanation
The FTP client identified a file or data set containing SOCKS server configuration information.

socks_configuration_file is the z/OS UNIX file or MVS data set containing SOCKS configuration information

System action
The FTP client continues processing. The SOCKS configuration will be referenced for any attempt to connect the client to an FTP server. The SOCKS configuration might cause the FTP client to connect to FTP servers through a SOCKS server, instead of connecting directly to the FTP server.

Operator response
If socks_configuration_file is the correct file to use for the SOCKS server configuration, no action is needed. Otherwise, contact the system programmer.

System programmer response
If socks_configuration_file is the correct file to use for the SOCKS server configuration, no action is needed. If you want to use a different file for the SOCKS configuration, see the z/OS Communications Server: IP Configuration Reference for information about configuring the FTP client for SOCKS.

Module
ezaftpcl

Procedure name
docstat()
Errors parsing SOCKS configuration file file on line line_number - use of SOCKS has been disabled.

Explanation
The FTP client located the specified SOCKS configuration file, but encountered syntax errors when parsing the information.

file is the name of the z/OS UNIX file or MVS data set containing the SOCKS configuration file.
line_number is the line of file where the error was encountered.

System action
The FTP client continues, but disables use of any SOCKS server for this session.

Operator response
Contact the system programmer.

System programmer response
Correct the error in the SOCKS configuration file or data set. See the z/OS Communications Server: IP Configuration Reference manual for information about configuring the FTP client for SOCKS.

Module
ezaftpcy

Procedure name
ftpSocks()

Error error opening SOCKS configuration file socks_configuration_file - use of SOCKS has been disabled

Explanation
The FTP client encountered an error while attempting to open the SOCKS configuration file.
error is the C run-time library error message returned for the failing fopen() call. For more information, see z/OS Language Environment Runtime Messages.
socks_configuration_file is the name of the file that failed to open.

System action
The FTP client continues. It will not be configured to use a SOCKS server.

Operator response
Specify the correct socks_configuration_file or contact the system programmer.

System programmer response
Specify the correct socks_configuration_file or correct the error indicated by error.

Module
EZAFTPCY
**Procedure name**
findSocks()

---

**EZA2864I**  Error error reading SOCKS configuration file socks_configuration_file - use of SOCKS has been disabled

**Explanation**
The FTP client encountered an error while attempting to read the SOCKS configuration file.

*error* is the C run-time library error message returned. For more information, see z/OS Language Environment Runtime Messages.

*socks_configuration_file* is the name of the file that had the read error.

**System action**
The FTP client continues. It will not be configured to use a SOCKS server.

**Operator response**
Specify the correct *socks_configuration_file* or contact the system programmer.

**System programmer response**
Specify the correct *socks_configuration_file* or correct the error indicated by *error*.

---

**Module**
EZAFTPCY

**Procedure name**
ftpSocks()

---

**EZA2865I**  Tape write is allowed to use BSAM I/O.

**Explanation**
When processing ASCII data in stream mode for GET and writing to tape, the FTP Client is allowed to use the BSAM I/O routine instead of the LE Run-Time Library. The WRTAPEFastio option has been set in the FTP.DATA data set or in a LOCSITE subcommand. The option is honored unless a request that contradicts it has been made (such as ASATRANS for a data set with ASA control characters).

**System action**
FTP continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

---

**EZA2866I**  Tape write is not allowed to use BSAM I/O.
Explanation
When processing ASCII data in stream mode for GET and writing to tape, the FTP Client must use the LE Run-Time Library fwrite() function. This is the default setting and is changed by specifying WRTAPEFastio TRUE in the FTP.DATA data set or by specifying WRTAPEFastio on a LOCSITE subcommand.

System action
FTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

EZA2870I TLS security mechanism negotiation failed - data connection closed

Explanation
The FTP client and server failed during the negotiation step (also known as the handshake) to protect a data connection with the TLS mechanism.

System action
No action is needed.

Operator response
Activate the FTP client and server traces as follows:

```
SITE DEBUG=(NONE,ACC,SOC(3))
DEBUG NONE ACC SOC(3)
```

Try the subcommand again and contact the system programmer with the error message.

If you are not allowed to issue the SITE command to change the server trace options, ask the system programmer to set the options, close the session to the server, enter FTP again and try the failing subcommand.

System programmer response
Use the FTP client and server traces to determine the cause of the error and correct the problem.

Module

getList, rcvXLMT, sndXLMT, rcvFile, rcvNullDir, sndFile

EZA2889I Authentication mechanism: mechanism

Explanation
This message is issued in response to the LOCSTAT subcommand. It indicates that the FTP session is protected by the authentication mechanism that is displayed.

The supported mechanisms are GSSAPI or TLS.
System action
FTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
EZAFTPCL

Procedure name
locstat

EZA2890I  Control connection protection: level

Explanation
This message is issued in response to the LOCSTAT subcommand. It indicates that the control connection has the security level that is displayed.
The possible security levels for the GSSAPI security mechanism are Clear, Safe, or Private.
The security level for the TLS security mechanism is always Private.

System action
FTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
EZAFTPCL

Procedure name
locstat

EZA2891I  Data connection protection: level

Explanation
This message is issued in response to the LOCSTAT subcommand. It indicates that the data connection has the security level that is displayed.
The possible security levels for the GSSAPI security mechanism are Clear, Safe, or Private.
The possible security levels for the TLS and TLS-P security mechanisms are Clear and Private.
System action
FTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
EZAFTPCL

Procedure name
locstat

Explanation
You issued the `ftp` command with the `port_number` parameter and the `-a` or `-r` parameter. The port number you specified was the secure port. The `-a` and `-r` start parameters are not allowed when you specify the port indicated by the `port_number` value.

In the message text:

*port_number*
   The port number on the remote host to which you specified that the FTP client should be connected.

System action
The FTP client ends.

Operator response
No action is needed.

System programmer response
No action is needed.

User response
Issue the `ftp` command without the `-a` or `-r` start parameter to log into the server using the secure port. Or, log into the server using the `-a` or `-r` start parameter with another port number.

Problem determination
Not applicable.

Source
z/OS Communications Server TCP/IP: FTP

Module
Not applicable.
Routing code
10

Descriptor code
12

Example
Your client FTP.DATA contains this statement:

```
TLSPORT 990
```

This statement sets the secure port to 990. You attempt to connect to the FTP server at port 990 on the host specified `hostname` value. You specify the `-a` parameter also:

```
/rpcbind ftp -v -a tls hostname 990
EZA2892I Secure port 990 does not allow the -a or -r start parameter
```

Message EZA2892I is issued because you specified the `-a` parameter while trying to connect to the secure port.

**EZA2894I** Security mechanism `mechanism` is not valid and is ignored

Explanation
You specified the mechanism on the `-a` or the `-r` parameter on the FTP command. The mechanism `mechanism` is not one of the supported mechanisms.

System action
FTP continues.

Operator response
If a security mechanism is required, stop FTP and start again with one of the supported security mechanisms. The supported security mechanisms are GSSAPI or TLS.

System programmer response
No action is needed.

Module
EZAFTPCY

Procedure name
processStartParms

**EZA2895I** Authentication negotiation succeeded

Explanation
A security mechanism was requested to protect the session. The client and server have successfully negotiated to protect the session.

System action
FTP continues.
Operator response
No action is needed.

System programmer response
No action is needed.

Module
EZAFTPCZ

Procedure name
ftpOpen

EZA2896I  Unable to set control connection protection to required level level

Explanation
The client was unable to set the control connection protection to the required level as specified on the SECURE_CTRLCONN statement in the client's FTP.DATA file. The server does not support the protection level for the control connection.

System action
FTP continues. The connection to the FTP server ends.

Operator response
Contact the system programmer with the error message to have the FTP.DATA file corrected.

System programmer response
Correct the FTP.DATA file to set the SECURE_CTRLCONN statement to a level supported by the server. See the z/OS Communications Server: IP Configuration Guide for information about configuring FTP.

Module
EZAFTPCZ

Procedure name
ftpOpen

EZA2897I  Authentication negotiation failed

Explanation
The client was unable to negotiate authentication with the server.

System action
FTP continues.

Operator response
Activate the FTP client and server traces as follows:
• SITE DEBUG=(NONE,SEC,SOC(3))
• DEBUG NONE SEC SOC(3)
Try the connection again and contact the system programmer with the error message.
If you are not allowed to issue the SITE command to change the server trace options, ask the system programmer to set the options, close the session to the server, enter FTP again and try the failing subcommand.

**System programmer response**
Use the MODIFY command to set the tracing options for the server.

**Module**
EZAFTPCZ

**Procedure name**
ftpOpen

---

**EZA2898I**  Unable to successfully negotiate required authentication

**Explanation**
The client was unable to successfully negotiate the required authentication with the server.

**System action**
The connection with the server ends. FTP continues.

**Operator response**
Activate the FTP server and client traces as follows:

- SITE DEBUG=(NONE,ACC,SOC(3))
- DEBUG NONE ACC SOC(3)

Try the connection again and contact the system programmer with the error message.

If you are not allowed to issue the SITE command to change the server trace options, ask the system programmer to set the options. Then close the session to the server, restart FTP, and try the failing subcommand.

If the server is not the z/OS FTP server, get servers traces as defined by the operating system of the FTP server.

**System programmer response**
Contact your IBM Support Representative and provide the client and server traces for diagnosis.

**Module**
EZAFTPCZ

**Procedure name**
ftpOpen

---

**EZA2899I**  Request to import name **name** failed

**Explanation**
The call to the gss_import_name() function failed to import **name**. This message is preceded by the messages EZA2912I and EZA2913I. See those messages for further diagnosis.

**System action**
FTP continues.
Operator response
No action is needed.

System programmer response
See z/OS Integrated Security Services Network Authentication Service Programming for an explanation of the gss_import_name() function.

EZA2903I The subcommand is not valid when there is no active security mechanism

Explanation
You entered a subcommand that is not valid when no security mechanism is active.

System action
FTP continues.

Operator response
See the z/OS Communications Server: IP User’s Guide and Commands for information about the valid security mechanisms for the subcommand.
System programmer response
No action is needed.

Module
EZAFTPFC

Procedure name
setclevel, setdlevel

EZA2904I  Cannot set protection level to level

Explanation
The protection was not set to the requested level. This might happen because the FTP.DATA file SECURE_CTRLCONN or SECURE_DATACONN statements do not support the requested level or because the server denied the request.

System action
FTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
EZAFTPFC

Procedure name
setclevel, setdlevel

EZA2905I  Control connection protection is level

Explanation
This message displays the current level of protection for the control connection.

System action
FTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
EZAFTPFC
**Procedure name**
setclevel

**EZA2906I** Data connection protection is *level*

**Explanation**
This message displays the current level of protection for the data connection.

FTP continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
EZAFTPFC

**Procedure name**
setdlevel

**EZA2907I** Attempt to encrypt data failed

**Explanation**
The call to the gss_wrap() function failed. This message is preceded by the messages EZA2912I and EZA2913I. See those messages for further diagnosis.

**System action**
FTP continues.

**Operator response**
No action is needed.

**System programmer response**
See z/OS Integrated Security Services Network Authentication Service Programming for an explanation of the gss_wrap() function.

**Module**
EZAFTPFC

**Procedure name**
gss_secure_command

**EZA2909I** Cannot base 64 decode reply: *error*

**Explanation**
A reply from the server was unable to be Base 64 decoded.
error will be one of the following:

1 **Bad character in encoding:** An invalid character was received from the server as part of a base 64 encoded string. The valid characters in a base 64 encoded string are the letters A-Z, the letters a-z, the numbers 0-9, the plus sign (+), and the forward slash (/).

2 **Encoding not properly padded:** An invalid base 64 encoded string was received from the server. The string was not padded with equal signs to extend the length of the string to a multiple of four characters.

3 **Decoded number of bits not a multiple of 8:** An invalid base 64 encoded string was received from the server. The string was unable to be decoded because it did not decode into a multiple of eight bits.

**System action**
FTP continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
EZAFTPFC

---

**EZA2916I**  
**local site variable statement_name is set to value**
Explanation
This message is displayed as part of the **LOCSTAT** subcommand output.

*statement_name* is the name of the statement coded in the client FTP.DATA file.

*value* is the current setting of *statement_name*. It is the default value assigned by FTP, or what you specified in the FTP.DATA file, or the most recent value you assigned with a **LOCSIte** subcommand. You can use the LOCSIte subcommand to change *value*. See the [z/OS Communications Server: IP User's Guide and Commands](https://www.ibm.com/systems/man8/comm/svcicfg003.html) and the [z/OS Communications Server: IP Configuration Reference](https://www.ibm.com/systems/man8/comm/svcicfg004.html) for information about the *statement_name* statement in the client FTP.DATA file.

**System action**
Processing continues.

**Operator response**
If you want to change the setting of *statement_name* temporarily, use the **LOCSIte** subcommand. See the [z/OS Communications Server: IP User's Guide and Commands](https://www.ibm.com/systems/man8/comm/svcicfg003.html) for information about the **LOCSIte** subcommand. If you want to make a permanent change to *statement_name*, see the [z/OS Communications Server: IP Configuration Reference](https://www.ibm.com/systems/man8/comm/svcicfg004.html) for information about coding the *statement_name* statement.

**System programmer response**
No action is needed.

**Module**
ezaftpcl

**Procedure name**
locstat()

---

**EZA2917I** PROXY OPEN is not supported with security mechanisms

**Explanation**
The FTP session is protected by the GSSAPI security mechanism or the TLS security mechanism. FTP does not allow a second session to be opened using PROXY OPEN while the primary session is protected.

**System action**
FTP continues.

**Operator response**
If proxy transfers are needed, close the primary connection and open a connection that does not have a security mechanism protecting the session. Then the PROXY OPEN can be issued.

**System programmer response**
No action is needed.

**Module**
EZAFTPCZ

**Procedure name**
ftpOpen
EZA2918I  Filetype SQL requires type A (ASCII) or E (EBCDIC)

Explanation
The user issued a PUT or APPEND subcommand. The file type that is specified by the LOCSITE subcommand or in the FTP.DATA file is SQL. An SQL transfer from the client requires that the data type of the connection is ASCII or EBCDIC.

System action
The PUT or APPEND subcommand is not performed.

Operator response
Change the data type by issuing the ASCII or EBCDIC subcommand and reissue the put or append subcommand.

System programmer response
No action is needed.

Module
EZAFTPCP

Module
EZAFTPCL

Procedure name
debug

EZA2926I The subcommand is not valid for the mechanism security mechanism

Explanation
The user entered an FTP subcommand during a session that was protected with a security mechanism. The subcommand is not valid while the session is secured.

In the message text:

mechanism
The security mechanism used to secure the session. Valid values are TLS and GSSAPI.

System action
The command is ignored.

Operator response
No action is needed.

System programmer response
When the mechanism value is GSSAPI, secure the session using a different security mechanism, do not secure the session, or instruct the user to refrain from entering the subcommand.

When the mechanism value is TLS, more subcommands are permitted during a TLS-secured session when the TLSRFCLEVEL parameter value is RFC4217 than when the TLSRFCLEVEL parameter value is DRAFT. If the TLSRFCLEVEL parameter value is DRAFT, consider setting the TLSRFCLEVEL parameter value to RFC4217.

For more information, see the following sources:

• The information about the steps for customizing the FTP client for TLS in z/OS Communications Server: IP Configuration Guide.
• The information about the TLSRFCLEVEL (FTP client and server) in z/OS Communications Server: IP Configuration Reference.
• The information about using security mechanisms in z/OS Communications Server: IP User's Guide and Commands.
• The information about the Locsite subcommand in z/OS Communications Server: IP User's Guide and Commands.

If the value TLSRFCLEVEL RFC4217 is not acceptable, or if using that value does not solve the problem, do one of the following:

• Do not secure the session
• Secure the session with a different mechanism
• Instruct the user to refrain from using the subcommand
User response
When the *mechanism* value is GSSAPI, either do not enter the subcommand, or report the error to the system programmer.

When the *mechanism* value is TLS, use the **LOCStat** subcommand to display the TLSRFCLEVEL configuration option value, and report the error to the system programmer.

Problem determination
If the FTP server is z/OS V1R9 or later, you can display the server’s TLSRFCLEVEL value with the **stat** subcommand. The server must be configured to use the value TLSRFCLEVEL RFC4217 to allow the client the full range of RFC 4217 functionality.

EZAFTPCT

Procedure name
cliDBOpt, sjisk
EZA2928I  File contains binary data - enter binary subcommand before entering transfer subcommand

Explanation
FTP has determined that the local file is tagged as a binary file. FTP will transfer this file only if the data type is set to binary.

System action
FTP continues.

Operator response
Enter the binary or TYPE I subcommand and reenter the transfer request.

System programmer response
No action is needed.

Module
EZAFTPCP

Procedure name
hfs_sndFile

EZA2929I  File contains ASCII data - enter ASCII subcommand before entering transfer subcommand

Explanation
FTP has determined that the local file is tagged as an ASCII file. FTP will transfer this file only if the data type is set to ASCII.

System action
FTP continues.

Operator response
Enter the ASCII or TYPE A subcommand and reenter the transfer request.

System programmer response
No action is needed.

Module
EZAFTPCP

Procedure name
hfs_sndFile

EZA2930I  Transfer failed because data cannot be translated

Explanation
The data cannot be translated using the current translate table. The translate table was built from the code sets that are specified by the SBDATACONN parameter on LOCSITE or an SBDATACONN statement in the FTP.DATA file. At the time the table was built, one or more of the codepoints was reported as untranslatable for specific data codepoints. The data in this transfer has one or more of the codepoints.
**System action**
FTP continues.

**Operator response**
Use LOCSITE SBDATACONN to build or select a translation table that can translate the codepoints in the data.

**System programmer response**
No action is needed.

---

**EZA2939I**  Tagged type file translated with current data connection translation table

**Explanation**
The FTP client detected that the local file is tagged with a coded character set ID (ccsid). The data connection translate table is not defined with the SBDATACONN=(file_system_cp,network_transfer_cp) method. Without a network transfer codepage, the client cannot build a translate table using the ccsid of the file. The FTP client uses the translate table defined for the data connection.

*type* is either ASCII or EBCDIC.

---

**System action**
FTP continues.

**Operator response**
If you do not want to use the current data connection translate table, issue a LOCSITE SBDATACONN=(file_system_cp,network_transfer_cp) subcommand to provide a codepage to be used to build a translate table.

**System programmer response**
No action is needed.

**Module**
EZAFTPCP

**Procedure name**
hfs_sndFile

---

**EZA2943I**  SBSUB is set to sbsub

**Explanation**
SBSUB can be set to either TRUE or FALSE.

*sbsub* is one of the following:

**TRUE**
A substitution character is used when untranslatable characters are encountered during the data transfer.
FALSE
The data transfer will fail because of an untranslatable character. FALSE is the default setting.

System action
FTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
EZAFTPCL

Procedure name
locstat()

EZA2944I SBSUBCHAR is set to sbsubchar

Explanation
During the data transfer, untranslatable characters will be replaced by the substitution character, sbsubchar. If SPACE is specified, then the ASCII or EBCDIC representation of a blank will be substituted. The SBSUBCHAR setting is ignored when SBSUB is set to FALSE.

sbsubchar is either SPACE or a substitution character in hexadecimal.

System action
FTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
EZAFTPCL

Procedure name
locstat()

EZA2946I SBSUBChar parameter sbsubchar is not valid - SBSUBChar ignored

Explanation
The SBSUBChar parameter must be either a hexadecimal number or SPACE.

sbsubchar is not a valid substitution character.
System action
The parameter is ignored.

Operator response
Reissue the LOCSITE command with a valid value specified for the SBSUBChar parameter. See the z/OS Communications Server: IP User's Guide and Commands, in the chapter about transferring data using the file transfer protocol for information about the parameters of the LOCSITE subcommand.

System programmer response
No action is needed.

Module
EZAFTPCK

Procedure name
locsite

EZA2947I  One or more characters were substituted during the transfer

Explanation
During a data transfer, one or more untranslatable characters were found and were replaced by the substitution character (SBSUBCHAR). For single byte transfers the substitution character specified by SBSUBCHAR will be used. See the z/OS Communications Server: IP Configuration Reference and the z/OS Communications Server: IP User's Guide and Commands for information about specifying and displaying the SBSUBCHAR value.

System action
FTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
ezaftpcg, ezaftpcp

Procedure name
hfs_rcvFile(), sndFile()

EZA2950I  usage: uuid@gen { -[pcPC]}

Explanation
This message displays the correct format and syntax for the UUID command. For more information about the UUID command, see the Network Computing System Reference Manual.

System action
TCPIP continues.
Operator response
Correct the format and syntax as indicated and resubmit the command.

System programmer response
Assist the user as necessary.

Module
UUID@GEN

Procedure name
main

EZA2956E  GLBD: unable to listen on type address family

Explanation
The Global Location Broker Daemon (GLBD), which controls the Global Location Broker database, which helps clients locate servers on the network, is unable to listen on a socket. The Berkeley socket concept is used for the Network Computing System (NCS), of which the GLBD is a part. Sockets are identified by a socket address composed of an address family, which defines the structure of the address, network address (host address), and port number (endpoint address). This message indicates that the GLBD cannot find a socket address for the indicated address family. No requests can be received over the socket.

System action
TCPIP continues.

Operator response
Notify the system programmer of the error.

System programmer response
Check the physical connections between the host and the network. Check to make sure that the indicated socket is available to the GLBD. For more information about the GLBD, see the z/OS Communications Server: IP Configuration Reference.

Module
GLBD

Procedure name
register_server

EZA2957E  GLBD: unable to listen on any address families

Explanation
The remote procedure call to the Global Location Broker Daemon (GLBD) did not include any active address families. The Berkeley socket concept is used for the Network Computing System, of which the GLBD is a part. It can listen to more than one socket identified by a socket address composed of an address family, which defines the structure of the address, the network (host) address, and port number (endpoint address). Without an active address family, the GLBD is unable to receive requests over a connection.

System action
TCPIP continues.
Operator response
Notify the system programmer of the error.

System programmer response
Check the remote procedure call used to invoke the GLBD to make sure that it contains active address families. For more information about the GLBD, see the z/OS Communications Server: IP Configuration Reference.

Module
GLBD

Procedure name
main

**EZA2961I** LLBD: (find_socket) called with no ready sockets

Explanation
The procedure find_socket, which finds an available socket for a Local Location Broker Daemon (LLBD) connection, was called, but found no sockets ready to open a connection. A connection is not established.

System action
TCPIP continues.

Operator response
Resubmit the request when a socket is available.

System programmer response
Assist the user as necessary.

Module
LLBD

Procedure name
find_socket

**EZA2962I** info name [port]

Explanation
This message provides information about the use of a port.

**Processing Request port**
The indicated port has been used to submit a request that is now being processed.

**Listening On port**
NCS is listening on the indicated port for user requests.

System action
TCPIP continues.

Operator response
No action is needed.
System programmer response
No action is needed.

Module
LLBD

Procedure name
print_socket_info

EZA2963I  LLBD: (use_family) Can't create socket

Explanation
The function use_family, which is called to set up a socket for a connection, was unable to create a socket. No connection is established.

System action
TCPIP continues.

Operator response
Resubmit the command when storage is available to create the socket.

System programmer response
Assist the user as necessary.

Module
LLBD

Procedure name
use_family

EZA2964I  LLBD: (use_family) Can't bind socket

Explanation
The function use_family, which is called to set up a socket for a connection to Local Location Broker Daemon (LLBD), was unable to bind the socket because the bind request was rejected by the remote host. No connection is established.

System action
TCPIP continues.

Operator response
Resubmit the command when a socket is available on the remote host.

System programmer response
Check the remote host to determine why it is rejecting the LLBD BIND request.

Module
LLBD

EZA2xxx messages 335
Procedure name
use_family

**EZA2965I**  LLBD: Unable to obtain *type* family port

**Explanation**
The Local Location Broker Daemon (LLBD) was unable to obtain a port for the indicated address family. The LLBD uses the Berkeley socket concept, allowing it to listen on multiple sockets, each of which has an address family, which defines the structure of the address, a network (host) address, and a port address. This message indicates the address family type for which the LLBD is unable to get a port. No connection is established.

**System action**
TCP/IP continues.

**Operator response**
Notify the system programmer of the error.

**System programmer response**
Check the host to determine why no port can be allocated.

**Module**
LLBD

**Procedure name**
open_sockets

**EZA2966E**  LLBD: Unable to obtain any sockets

**Explanation**
The Local Location Broker Daemon (LLBD) is unable to obtain any sockets for communication with the network. The LLBD uses sockets to listen for requests and to send replies.

**System action**
TCP/IP continues.

**Operator response**
Notify the system programmer of the error.

**System programmer response**
Make sure that the LINK and DEVICE statements for the LLBD are configured properly and that the socket allocation requests submitted by LLBD specify valid, available sockets. Check the physical connections between the host and the network. Make sure that one or more ports are available to handle the sockets. For more information about socket errors, see the z/OS Communications Server: IP Programmer's Guide and Reference.

**EZA2977E** specification - illegal broker specification

**Explanation**
The set_broker command contained an incorrect broker specification. The command is not processed. For more information about the specifications for set_broker command, see the *Network Computing System Reference Manual*.

**System action**
TCPIP continues.

**Operator response**
Correct the specification and resubmit the command.

System programmer response
Assist the user as necessary.

Module
LB@ADMIN

Procedure name
main

**EZA2948I** Usage: set_broker local | global

**Explanation**
This message displays the format and syntax for the use_broker command, which is used to specify the location broker to be used. For more information about the use_broker command, see the *Network Computing System Reference Manual*.

**System action**
TCPIP continues.

**Operator response**
Correct the syntax and resubmit the command.

System programmer response
Assist the user as necessary.
EZA2979I  No entries match.

Explanation
No entries were found matching the location broker found in the use_broker command. The command is not processed.

System action
TCPIP continues.

Operator response
Resubmit the use_broker command, specifying a valid location broker. For more information about the use_broker command, see the Network Computing System Reference Manual.

System programmer response
Assist the user as necessary.

EZA2991I  id=id
EZA2992I  Bindings for id @ hash_table_position

Explanation
These messages display information from the server's name table in a readable form.

System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.
Unexpected (or unimplemented) type ("EZA2995I") encountered in label EZA2996I; exiting.

Explanation
The function BACKEND_init, which initializes the code for the BACKEND procedure, encountered a type that it does not recognize in the indicated label. The function exits the label containing the unrecognized type.

System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

NIDL compiler invoked

Explanation
This message indicates that the Network Interface Definition Language (NIDL) compiler has been invoked.
**System action**
The NIDL compiler is initialized. TCPIP continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
MAIN

**Procedure name**
main

**EZA2999I**  NIDL compiler ended

**Explanation**
The Network Interface Definition Language compiler (NIDL) has ended.

**System action**
The NIDL compiler ends. TCPIP continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.
Chapter 5. EZA3xxxx messages

**EZA3000I**  unexpected EOF inside a comment at line *line*

**Explanation**
The Network Interface Definition Language (NIDL) compiler encountered an unexpected end of file in a comment at the indicated line in the current file. Processing of the file halts.

**System action**
TCPIP continues.

**Operator response**
Notify the system programmer of the problem.

**System programmer response**
Remove the end of file marker from the comment and recompile. For more information about NIDL, see the z/OS Communications Server: IP Programmer's Guide and Reference.

**Module**
LEX YY

**Procedure name**
main

**EZA3001E**  Illegal option ftype in getflags: *ftype*

**Explanation**
The Network Interface Definition Language (NIDL) compiler encountered an incorrect option in the procedure getflags, which is used to set processing flags for the compiler. The option is not processed.

**System action**
TCPIP continues.

**Operator response**
Notify the system programmer of the error.

**System programmer response**
Correct the indicated option and recompile. For more information about NIDL compiler options, see the z/OS Communications Server: IP Programmer's Guide and Reference.

**Module**
GETFLAGS

**Procedure name**
main

**EZA3002E**  Unknown flag (*flag*) in getflags
**Explanation**
The Network Interface Definition Language (NIDL) compiler encountered an option that it does not recognize. The option is not processed.

**System action**
TCPIP continues.

**Operator response**
Notify the system programmer of the error.

**System programmer response**
Correct the indicated option and recompile. For more information about NIDL compiler options, see the z/OS Communications Server: IP Programmer's Guide and Reference.

**Module**

**EZA3003E Options table:**

**Explanation**
This message precedes the printing of the options table for the Network Interface Definition Language (NIDL) compiler in response to an incorrect option.

**System action**
The options table is displayed. TCPIP continues.

**Operator response**
Notify the system programmer of the error.

**System programmer response**
Correct the options as necessary and recompile.

**Module**
GETFLAGS

**Procedure name**
printflags

**EZA3004E option**

**Explanation**
The indicated option for the Network Interface Definition Language (NIDL) compiler is incorrect. The compiler halts.
**System action**
The compiler halts. TCPIP continues.

**Operator response**
Notify the system programmer of the error.

**System programmer response**
Correct the option and recompile. For information on NIDL compiler options, see the *Network Computing System Reference Manual*.

**Module**
GETFLAGS

**Procedure name**
printflags

**EZA3005E** illegal option in printflags: *option*

**Explanation**
The indicated option for the Network Interface Definition Language (NIDL) compiler is either incorrect or not allowed.

**System action**
The compiler halts. TCPIP continues.

**Operator response**
Notify the system programmer of the error.

**System programmer response**
Correct the option and recompile. For more information about NIDL compiler options, see the *Network Computing System Reference Manual*.

**Module**
GETFLAGS

**Procedure name**
printflags

**EZA3006E** *flag*

**Explanation**
The indicated INTARG flag for the Network Interface Definition Language (NIDL) compiler is incorrect.

**System action**
The compiler halts. TCPIP continues.

**Operator response**
Notify the system programmer of the error.
**System programmer response**
Correct the flag and recompile. For more information about NIDL compiler flags, see the *Network Computing System Reference Manual*.

**Module**
GETFLAGS

**Procedure name**
printflags

---

**EZA3007E  STRARG_flag**

**Explanation**
The indicated STRARG flag for the Network Interface Definition Language (NIDL) compiler is incorrect.

**System action**
The compiler halts. TCPIP continues.

**Operator response**
Notify the system programmer of the error.

**System programmer response**
Correct the flag and recompile. For more information about flags for the NIDL compiler, see the *Network Computing System Reference Manual*.

---

**Module**
GETFLAGS

**Procedure name**
printflags

---

**EZA3008E  flag**

**Explanation**
The indicated Network Interface Definition Language (NIDL) flag, which is either a TOGGLEARG flag or an ASSERTARG flag, is incorrect.

**System action**
The NIDL compiler halts. TCPIP continues.

**Operator response**
Notify the system programmer of the error.

**System programmer response**
Correct the flag and recompile. For more information about NIDL compiler flags, see the *Network Computing System Reference Manual*.
Module
GETFLAGS

Procedure name
printflags

EZA3009E  flag

Explanation
The DENYARG flag for the Network Interface Definition Language (NIDL) compiler is incorrect.

System action
The NIDL compiler halts. TCPIP continues.

Operator response
Notify the system programmer of the error.

System programmer response
Correct the DENYARG flag and recompile. For more information about NIDL compiler options, see the Network Computing System Reference Manual.

Module
GETFLAGS

Procedure name
printflags

EZA3010E  flag

Explanation
The CHRARG flag for the Network Interface Definition Language (NIDL) compiler is incorrect.

System action
The NIDL compiler halts. TCPIP continues.

Operator response
Notify the system programmer of the error.

System programmer response
Correct the CHRARG flag and recompile. For more information about NIDL compiler options, see the Network Computing System Reference Manual.
Explanation
The FLTARG flag for the Network Interface Definition Language (NIDL) compiler is incorrect.

System action
The NIDL compiler halts. TCPIP continues.

Operator response
Notify the system programmer of the error.

System programmer response
Correct the FLTARG flag and recompile. For more information about NIDL compiler options, see the Network Computing System Reference Manual.

Module
GETFLAGS

Procedure name
printflags

EZA3012E flag

Explanation
The LONGARG flag for the Network Interface Definition Language (NIDL) compiler is incorrect.

System action
The NIDL compiler halts. TCPIP continues.

Operator response
Notify the system programmer of the error.

System programmer response
Correct the LONGARG flag and recompile. For more information about NIDL compiler options, see the Network Computing System Reference Manual.

Module
GETFLAGS

Procedure name
printflags

EZA3013E usage: NIDL fileName [flags]

Explanation
The NIDL command, which is used to invoke the Network Interface Definition Language (NIDL) compiler, was incorrect. The command is not processed. This message gives the correct format and syntax for the NIDL command. For more information about the NIDL compiler, see the Network Computing System Reference Manual.
**System action**  
TCPIP continues.

**Operator response**  
Correct the NIDL command and resubmit it.

**System programmer response**  
Assist the user as necessary.

explain_args

**EZA3014E**  
-ansi is no longer needed.

**Explanation**  
The NIDL command, which is used to invoke the Network Interface Definition Language (NIDL) compiler, was submitted with the ansi option specified. The ansi option is no longer necessary. The command is not processed.

**System action**  
TCPIP continues.

**Operator response**  
Resubmit the command without specifying the ansi option.

**System programmer response**  
Assist the user as necessary.

**Module**  
FRONTEND

**Procedure name**  
NIDL_init

**EZA3030E**  
(alloc_socket) Can't create socket, errno=errno

**Explanation**  
The procedure alloc_socket, which is called to allocate a socket, was unable to create a new socket.  
errno is the UNIX System Services Return Code. These return codes are listed and described in the z/OS UNIX System Services Messages and Codes.

**System action**  
TCPIP continues.

**Operator response**  
Notify the system programmer of the error.
System programmer response
Use the *errno* displayed in this message to determine the cause of the error and respond as indicated.

Module
RPC@C

Procedure name
alloc_socket

**EZA3031E** (alloc_socket) Can't bind socket, *errno=errno*

Explanation
The function alloc_socket, which is called to allocate a socket, was unable to bind a socket to open communications.

*errno* is the UNIX System Services Return Code. These return codes are listed and described in the z/OS UNIX System Services Messages and Codes.

System action
TCPIP continues.

Operator response
Notify the system programmer of the error.

System programmer response
Use the *errno* displayed in this message to determine the cause of the error and respond as indicated.

Module
RPC@C

Procedure name
alloc_socket

**EZA3032E** (send_pkt) cannot enable broadcast, *status=status*

Explanation
The function send_pkt, which is called to send packets to clients, is unable to broadcast a packet over the network because the socket from which the packet is to be sent does not have the correct status.

System action
TCPIP continues.

Operator response
Notify the system programmer of the error.

System programmer response
Determine the reason the socket has an incorrect status and respond as indicated.
Module
RPC@C

Procedure name
send_pkt

EZA3033E  (send_pkt) cannot enable broadcast, errno=errno

Explanation
The function send_pkt, which is called to send a packet, could not send a broadcast message. No packet is sent. 
errno is the UNIX System Services Return Code. These return codes are listed and described in the z/OS UNIX System Services Messages and Codes.

System action
TCPIP continues.

Operator response
Notify the system programmer of the error.

System programmer response
Use the errno displayed in this message to determine the cause of the error and respond as indicated.

Module
RPC@C

Procedure name
send_pkt

EZA3034E  (recv_pkt\client) Rcvd packet from wrong place; wanted “address”

EZA3035E  (recv_pkt\client) got “address”

Explanation
The function recv_pkt\client, which is called to receive a packet, received a packet from an address other than the one it expected. The packet is discarded.

System action
TCPIP continues.

Operator response
Notify the system programmer of the error.

System programmer response
Check the client and both indicated addresses to determine why the client is receiving packets from an incorrect address.
Procedure name
recv_pkt/client

EZA3036I  (recv_pkt/client) Rcvd callback (ptype=packet_type)

Explanation
The function recv_pkt/client, which is called to receive a packet, received a callback from a client indicating that
the last packet sent to that client has been received.

System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
RPC@C

Procedure name
recv_pkt/client

EZA3037I  (recv_pkt/client) Rcvd packet not for my activity

Explanation
The host received a packet that does not match the host's current activity. If the sequence number of the packet
is correct, the packet will be acknowledged, preventing retransmission of the packet. Otherwise the packet will
be discarded, causing the client to resend the packet when the acknowledgment time out expires.

System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
RPC@C

Procedure name
recv_pkt/client

EZA3038I  (recv_pkt/client) Rcvd packet with bad seq (should be number, is number ptype=packet_type)
Explanation
The host has received a packet with an incorrect sequence number. The packet is discarded without acknowledgment, causing the client to resend the packet after the acknowledgment time out has expired. The actual sequence number, expected sequence number, and packet type are displayed in this message.

System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
RPC@C

Procedure name
recv_pkt\client

EZA3039I  (ack_replies) Acking [address, sequence_number]

Explanation
The function ack_replies, which is called to send acknowledgments for packets that have been received, is sending an acknowledgment to the indicated address for the packet with the indicated sequence number.

System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
RPC@C

Procedure name
ack_replies

EZA3040E  (ack_replies) Can't send ACK, errno=errno

Explanation
The function ack_replies, which is called to acknowledge packets that have been received, is unable to send an acknowledgment. 

errno is the UNIX System Services Return Code. These return codes are listed and described in the z/OS UNIX System Services Messages and Codes.
System action
TCPIP continues.

Operator response
Notify the system programmer of the error.

System programmer response
Use the errno given in this message to determine the cause of the error and respond as indicated.

Module
RPC@C

Procedure name
ack_replies

EZA3041I  (await_reply) timeout

Explanation
The host is currently in a time out initiated by the procedure await_reply, which is called to put the host in a wait state to receive packets.

System action
After the timeout, the host resumes processing. TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
RPC@C

Procedure name
await_reply

EZA3042I  (await_reply) timeout (EINTR)

Explanation
A request from the function await_reply, which waits for a reply to a packet, to the operating system was interrupted. The request will be resubmitted to the system.

System action
TCPIP continues.

Operator response
No action is needed.
System programmer response
No action is needed.

Module
RPC@C

Procedure name
await_reply

**EZA3043I** *(rpc_sar) Starting to ping*

**Explanation**
The host is sending a PING packet to check for the existence of other hosts on the network. For more information about the PING function, see the z/OS Communications Server: IP System Administrator's Commands.

**System action**
TCPIP continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

Module
RPC@C

Procedure name
rpc_sar

**EZA3044I** *(rpc_sar) Too many pings...signaling*

**Explanation**
The local host has sent the maximum number of PING packets to check for the existence of another host on the network. The local host assumes that the host it is seeking does not exist. No more PING packets are sent.

**System action**
TCPIP continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.
Procedure name
rpc__sar

EZA3045I  (rpc__sar) Rcvd “working” during frag send!

Explanation
The host received a “working” packet, but the host is sending fragmented packets, disrupting data transmission. The packet is acknowledged.

System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
RPC@C

Procedure name
rpc__sar

EZA3046I  (rpc__sar) Rcvd “working” pkt; seq=number

Explanation
The host has received a “working” packet with the indicated sequence number. The packet is acknowledged.

System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
RPC@C

Procedure name
rpc__sar

EZA3047I  (rpc__sar) Got “fack” for non-large request!
Explanation
The host received a fragmentation acknowledgment packet for a request that was not large enough to need fragmentation. This indicates that the client is configured to receive a smaller maximum transmission unit (MTU) than the host is configured to send. The packet is transmitted in fragments to allow the client to receive it.

System action
TCPIP continues.

Operator response
Notify the system programmer of the error.

System programmer response
Check the client to determine why it is acknowledging fragmentation when none is necessary.

Module
RPC@C

Procedure name
rpc__sar

EZA3048I (rpc__sar) Got “response” during frag recv!

Explanation
The host received a response packet while sending a fragmented packet. The response packet is received and acknowledged after sending of the fragmented packet is completed.

System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
RPC@C

Procedure name
rpc__sar

EZA3049I (rpc__sar) Got non-frag “response” during frag send!

Explanation
The host received a non-fragmented response packet while sending a fragmented packet. The response will be accepted and acknowledged after the host is through sending the fragmented packet.
System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
RPC@C

Procedure name
rpc__sar

EZA3050E  (use_family) Can't create socket

Explanation
The function use_family, which is used to create and register a socket for listening, was unable to create a
socket. This prevents the host from receiving requests over the connection.

System action
TCPIP continues.

Operator response
Notify the system programmer of the error.

System programmer response
Check the host to determine why it is unable to create a socket, and respond as indicated. For more information
about socket errors, see the z/OS Communications Server: IP Programmer's Guide and Reference.

Module
RPC@S

Procedure name
use_family

EZA3051E  (use_family) Can't bind socket, errno=errno

Explanation
The function use_family, which is used to create and register a socket for listening, could not bind a socket to
open a connection, preventing the host from receiving requests over that connection.

errno is the UNIX System Services Return Code. These return codes are listed and described in the z/OS UNIX
System Services Messages and Codes.

System action
TCPIP continues.
**Operator response**

Notify the system programmer of the error.

**System programmer response**

Use the `errno` displayed in this message to determine the cause of the error and respond as indicated.

**Module**

RPC@S

**Procedure name**

use_family

---

**EZA3052E** *(rpc__use_family)* Can't getsockname, `errno=errno`

**Explanation**

The function `getsockname`, which is used by the function `rpc__use_family` to get the name of a socket to be used for listening, was unsuccessful. The connection is not established.

`errno` is the UNIX System Services Return Code. These return codes are listed and described in the [z/OS UNIX System Services Messages and Codes](https://publib.boulder.ibm.com/infocenter/osc赛区/).  

**System action**

TCPIP continues.

**Operator response**

Notify the system programmer of the error.

---

**EZA3053E** *(rpc__use_family)* Can't get my netaddr

**Explanation**

The function `rpc__use_family`, which uses a socket to listen for requests from clients, was unable to get the network address for the socket. The socket is closed.

**System action**

TCPIP continues.

**Operator response**

Notify the system programmer of the error.
System programmer response
Check the host to determine why the network address was not passed to rpc__use_family. For more information about this function, see the Network Computing System Reference Manual.

Module
RPC@S

Procedure name
rpc__use_family

EZA3054E (rpc__use_family) Can't get socket

Explanation
The function rpc__use_family, which uses a socket to listen for requests, was unable to get a socket. The connection is not established.

System action
TCPIP continues.

Operator response
Notify the system programmer of the error.

System programmer response
Check the host to determine why no socket is available and respond as indicated. For more information about socket errors, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

Module
RPC@S

Procedure name
rpc__use_family

EZA3055I (scan_activities) Freeing passive connection

Explanation
The function scan_activities, which retransmits unacknowledged replies and frees old activities, is freeing the indicated passive connection.

System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.
Module
RPC@S

Procedure name
scan_activities

EZA3056I  (scan_activities) Passivating idle connection

Explanation
The function scan_activities, which retransmits unacknowledged replies and frees old activities, is changing the state of the indicated connection from idle to passive open.

System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
RPC@S

Procedure name
scan_activities

EZA3057I  (scan_activities) Dropping reply [identifier, sequence_number]

Explanation
The function scan_activities, which retransmits unacknowledged replies and frees old activities, is dropping the indicated packet because it has been sent the maximum allowable number of times.

System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
RPC@S

Procedure name
scan_activities

EZA3058I  (scan_activities) Retransmitting reply (state=state) [id, reply_packet_sequence_header_]

EZA3xxxx messages  363
**Explanation**  
The function scan_activities, which retransmits unacknowledged replies and frees old activities, is resending the indicated packet.

**System action**  
TCPIP continues.

**Operator response**  
No action is needed.

**System programmer response**  
No action is needed.

**Module**  
RPC@S

**Procedure name**  
scan_activities

**Explanation**  
The function ping_common, which is used to process request and PING packets whose sequence numbers indicated that they are current, is processing the indicated packet.

**System action**  
TCPIP continues.

**Operator response**  
No action is needed.

**System programmer response**  
No action is needed.

**Module**  
RPC@S

**Procedure name**  
ping_common

**Explanation**  
The function ping_common, which is used to process request and PING packets whose sequence number indicates that they are current, is resending the indicated reply packet.
**System action**

TCPIP continues.

**Operator response**

No action is needed.

**System programmer response**

No action is needed.

**Module**

RPC@S

**Procedure name**

ping_common

**EZA3061I (ping_common) No call (state=state, ptype=packet_type) [id., sequence_number]**

**Explanation**

The function ping_common, which is used to process request and PING packets whose sequence numbers indicate that they are current, received a packet that did not contain a call for a service.

**System action**

TCPIP continues.

**Operator response**

No action is needed.

**System programmer response**

No action is needed.

**Module**

RPC@S

**Procedure name**

ping_common

**EZA3062I (who_are_you) Doing callback**

**Explanation**

The function who_are_you, which is used to determine the identity of a client, is doing a callback to the client.

**System action**

TCPIP continues.

**Operator response**

No action is needed.
System programmer response
No action is needed.

Module
RPC@S

Procedure name
who_are_you

EZA3063I  (who_are_you) Can't bind to client, st=status

Explanation
The function who_are_you, which is used to determine the identity of a client, is unable to bind a socket for communication with the client. The reason is indicated by the status displayed in this message.

System action
TCPIP continues.

Operator response
Notify the system programmer of the error.

System programmer response
Respond as indicated by the status displayed in this message.

Module
RPC@S

Procedure name
who_are_you

EZA3064I  (who_are_you) fault, st=status

Explanation
The function who_are_you, which is used to determine the identity of a client, has encountered an error. The connection to the client is not established. The reason is indicated by the status displayed in this message.

System action
TCPIP continues.

Operator response
Notify the system programmer of the error.

System programmer response
Respond as indicated by the status displayed in this message.

Module
RPC@S
Procedure name
who_are_you

EZA3065I (who_are_you) who_are_you failed, st=status

Explanation
The function who_are_you, which is used to determine the identity of a client, was unsuccessful. The reason is indicated by the status displayed in this message. The connection is closed and the function rpc__free_handle is called to free the socket.

System action
TCPIP continues.

Operator response
Notify the system programmer of the error.

System programmer response
Respond as indicated by the status displayed in this message.

Module
RPC@S

Procedure name
who_are_you

EZA3066I (do_request_frag) Bad initial frag

Explanation
The function do_request_frag, which is called to handle fragmented request packets, received an initial fragment other than the one that was expected.

System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
RPC@S

Procedure name
do_request_frag

EZA3067I (do_request_frag) Out of order frag; expecting number [packet_type, sequence_number]
Explanation
The function do_request_frag, which is used to handle fragmented request packets, received a fragment other than the one that is expected. The fragment is not acknowledged, prompting the sending client to resend the fragment after the acknowledgment timeout.

System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
RPC@S

Procedure name
do_request_frag

EZA3068I (do_request) Unknown interface [packet_type, sequence_number]

Explanation
The function do_request, which accepts and handles client request packets, received a packet from an interface that is not registered with a location broker. The packet is refused and the request is not processed.

System action
TCPIP continues.

Operator response
Notify the system programmer of the error.

System programmer response
Register the interface with the location broker and resubmit the request. For more information about registering an interface with a location broker, see the z/OS Communications Server: IP Sockets Application Programming Interface Guide and Reference.

Module
RPC@S

Procedure name
do_request.

EZA3069I (do_request) Opnum out of range [id, sequence_number]

Explanation
The function do_request, which accepts and handles client request packets, received a packet whose operation number was outside the valid range. The packet is rejected, prompting the sending client to create a new packet to send the request.
System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
RPC@S

Procedure name
do_request.

EZA3070I  (do_request) Got inappropriate request (state=state) [id, sequence_number]

Explanation
The function do_request, which accepts and handles client requests, received a request packet during the processing of a duplicate request. Processing of the old request halts. The new request is returned, prompting the client to retransmit the request and allowing the host time to shut down processing of the old request.

System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
RPC@S

Procedure name
do_request.

EZA3071I  (do_request) Old sequence, previous=sequence_number [id, sequence_number]

Explanation
The function do_request, which accepts and handles client request packets, received a packet whose sequence number indicates that it is not current. The packet is rejected.

System action
TCPIP continues.

Operator response
No action is needed.
System programmer response
No action is needed.

Module
RPC@S

Procedure name
do_request

EZA3072I (do_request) Mismatch sequence during frag reassembly [id, sequence_number]

Explanation
The function do_request, which accepts and handles client request packets, received a packet with an incorrect sequence number during the reassembly of a fragmented packet. The fragment is rejected. The fragmented packet is reassembled.

System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
RPC@S

Procedure name
do_request

EZA3073E (do_request) Protocol error [id, sequence_number]

Explanation
The function do_request, which accepts and handles client request packets, encountered a protocol error caused by an out of sequence packet. The packet is not processed.

System action
TCPIP continues.

Operator response
Notify the system programmer of the error.

System programmer response
Check the sending device to determine why it is sending out of sequence packets.

Module
RPC@S
Procedure name
do_request.

EZA3074E (do_request) Fault while executing request, st=status

Explanation
The function do_request, which accepts and handles client request packets, encountered an error while processing a request. The reason is indicated by the status displayed in this message.

System action
Processing halts. TCPIP continues.

Operator response
Notify the system programmer of the error.

System programmer response
Respond as indicated by the status portion of this message.

Module
RPC@S

Procedure name
do_request.

EZA3075I (do_ping) No call (no activity for this call) [id, sequence_number]

Explanation
The function do_ping, which handles PING packets, received a packet that did not contain a request for an activity.

System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
RPC@S

Procedure name
do_ping

EZA3076I (do_ping) No call )higher numbered ping), ahint=activity_number, previous=old*us.sequence_number [id, sequence_number]
Explanation
The function do_ping, which handles PING packets, received a packet with a sequence number higher than the sequence number of the current activity, indicating that the “quit” packet for that activity has been lost. The current activity is stopped.

System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
RPC@S

Procedure name
do_ping

EZA3077I  (do_ping) Drop ping [id, sequence_number]

Explanation
The function do_ping, which is called to handle PING packets, is dropping the indicated PING packet.

System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
RPC@S

Procedure name
do_ping

EZA3078I  (do_ack) No or incorrect ahint in ack, ahint=activity_number [id, sequence_number]

Explanation
The function do_ack, which handles acknowledgment packets, received a packet with a missing or incorrect activity number. The packet is dropped, then resent.

System action
TCPIP continues.
Operator response
No action is needed.

System programmer response
No action is needed.

Module
RPC@S

Procedure name
do_ack.

EZA3079I  (do_fack) No or incorrect ahint in fack, ahint=activity_number [id, sequence_number]

Explanation
The function do_fack, which handles fragmented acknowledgment packets, received a packet with a missing or incorrect activity number for a fragmented packet. The packet is dropped, the packet is resent.

System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
RPC@S

Procedure name
do_ack.

EZA3080I  (do_fack) Anomalous fack, state=state, prev_seq=sequence_number, frag=fragment_number, [id, sequence_number]

Explanation
The function do_fack, which handles fragmented acknowledgment packets, received a packet with a state, sequence number, or fragmentation number other than what was expected.

System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.
Module
RPC@S

Procedure name
do_fack

EZA3081I (do_quit) No call (no activity for this call) [id, sequence_number]

Explanation
The function do_quit, which handles quit packets, received a packet that did not contain an activity number.

System action
TCP/IP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
RPC@S

Procedure name
do_quit

EZA3082I (do_bad_pkt) Bad pkt, ptype=packet_type [id, sequence_number]

Explanation
The function do_bad_pkt, which handles incorrect packets, has been called for the indicated packet.

System action
TCP/IP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
RPC@S

Procedure name
do_bad_pkt

EZA3083I (rpc__listen_dispatch) Trash ahint (activity_number)
The function rpc__listen_dispatch, which does server-side processing for one incoming packet, received a packet with an activity number that is greater than the range of valid activity numbers. The packet is discarded.

System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Procedure name
rpc__listen_dispatch

EZA3084I (rpc__listen_dispatch) Trashi ihint (activity_number)

The function rpc__listen_dispatch, which does server-side processing for one packet, received a packet with an IP address outside the valid range. The packet is discarded.

System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Procedure name
rpc__listen_dispatch

EZA3085I (rpc__listen_dispatch) Server boot time mismatch

The function rpc__listen_dispatch, which handles server-side processing for one packet at a time, received a packet with a server boot time field that does not match the current server. This indicates that the server has been rebooted since the last communication with this client. The packet is rejected, prompting the client to update their tables with the correct boot time. The packet will be resent by the client.
System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
RPC@S

Procedure name
rpc__listen_dispatch

EZA3086I  (check_for_pkt) Rcvd (ptype= type) [id, sequence_number]

Explanation
The function check_for_pkt, which checks all sockets for data and processes any non-request packets, received the indicated packet.

System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
RPC@S

Procedure name
check_for_pkt

EZA3087I  (check_for_pkt) Waiting...

Explanation
The function check_for_pkt, which checks all sockets for data and processes any non-request packets, is currently in a waiting state.

System action
TCPIP continues.

Operator response
No action is needed.
System programmer response
No action is needed.

Module
RPC@S

Procedure name
check_for_pkt

EZA3088I (check_for_pkt) Checking for pkts...

Explanation
The function check_for_pkt, which checks all sockets for data and processes any non-request packets, is checking all sockets for data.

System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
RPC@S

Procedure name
check_for_pkt

EZA3089I (listen) task task_number

Explanation
The function listen, which listens for requests from clients, received a packet with a request for the indicated task.

System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
RPC@S
**EZA3090I**  (listen) Spurious quit activity fault ignored

**Explanation**
The function listen, which listens for requests from clients, received a quit request for an activity that has already been stopped. The request is ignored.

**System action**
TCPIP continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
RPC@S

**Procedure name**
listen

---

**EZA3091I**  (listen) wait failed status

**Explanation**
The function listen, which listens for requests from clients, did not receive data after entering a wait state to wait for data.

**System action**
TCPIP continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
RPC@S

**Procedure name**
listen

---

**EZA3092I**  (listen) Spurious quit activity fault ignored
**Explanation**
The function listen, which listens for requests from clients, received a quit request for an activity that has already been stopped. The request is ignored.

**System action**
TCPIP continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
RPC@S

**Procedure name**
listen

---

**EZA3093E**  (rpc) *** FATAL ERROR "error" at file\line ***

**Explanation**
The server has encountered an error in the indicated data set at the indicated line.

**System action**
Processing of the data set halts. TCPIP continues.

**Operator response**
Notify the system programmer of the error.

**System programmer response**
Correct the data set as indicated and resubmit it for processing.

**Module**
RPC@UTIL

**Procedure name**
rpc__die

---

**EZA3094E**  (rpc__lock) Can't get lock lock at file\line

**Explanation**
The function rpc__lock, which is used to make sure that only one processing thread is occurring during many RPC runtime routines, was unable to lock the indicated data set at the indicated line.

**System action**
Processing of the data set halts. TCPIP continues.
**Operator response**

Notify the system programmer of the error.

**System programmer response**

Correct the indicated line in the data set and resubmit the data set for processing.

**Module**

RPC@UTIL

**Procedure name**

rpc__lock

---

**EZA3095E** (rpc__recvfrom) Error in recv, errno=errno

**Explanation**

The function rpc__recvfrom, which is used to receive a packet from a socket, was unable to receive a packet. 

*errno* is the UNIX System Services Return Code. These return codes are listed and described in the z/OS UNIX System Services Messages and Codes.

**System action**

TCP/IP continues.

**Operator response**

Notify the system programmer of the error.

**System programmer response**

Use the *errno* displayed in this message to determine the cause of the error and respond as indicated.

**Module**

RPC@UTIL

**Procedure name**

rpc__recvfrom

---

**EZA3096E** (rpc__recvfrom) Bad RPC version (version)

**Explanation**

The function rpc__recvfrom, which receives a packet from a socket, received a packet sent by an incompatible RPC version. The packet is not processed.

**System action**

TCP/IP continues.

**Operator response**

Notify the system programmer of the error.
System programmer response
Replace the incompatible RPC version with a compatible one. For more information about RPC versions, see the Network Computing System Reference Manual.

Module
RPC@UTIL

Procedure name
rpc__recvfrom

EZA3097E  (rpc__recvfrom) Bad pkt type (type)

Explanation
The function rpc__recvfrom, which receives a packet from a socket, received a packet with an incorrect type. The packet is not processed.

System action
TCPIP continues.

Operator response
Notify the system programmer of the error.

System programmer response
Check the sending device to determine why it is sending incorrect packet types.

Module
RPC@UTIL

Procedure name
rpc__recvfrom

EZA3098E  (rpc__recvfrom) Packet too short: is length data length is length

Explanation
The function rpc__recvfrom, which receives a packet from a socket, received a packet that is too small. The packet is not processed.

System action
TCPIP continues.

Operator response
Notify the system programmer of the error.

System programmer response
Check the sending device to determine why it is sending packets that are smaller than allowed.

Module
RPC@UTIL
**Procedure name**
rpc__recvfrom

**EZA3099E**  (rpc__sendto) sento failed, errno=errno

**Explanation**
The function rpc__sendto, which sends a packet to a socket, was unsuccessful. 
*errno* is the UNIX System Services Return Code. These return codes are listed and described in the *z/OS UNIX System Services Messages and Codes*.

**System action**
TCPIP continues.

**Operator response**
Notify the system programmer of the error.

**System programmer response**
Use the *errno* displayed in this message to determine the cause of the error and respond as indicated.

**Module**
RPC@UTIL

**Procedure name**
 rpc__sendto

**EZA3100E**  (periodic_task) “task” task exited, status=status

**Explanation**
A task that is called periodically has been exited, rather that entering a wait state until the next call. The *status* displayed in this message indicates the reason.

**System action**
The task is exited. TCPIP continues.

**Operator response**
Notify the system programmer of the error.

**System programmer response**
Use the *status* displayed in this message to determine the cause of the error and respond as indicated.

**Module**
RPC@UTIL

**Procedure name**
periodic_task

**EZA3101I**  rpc_vers: version

Chapter 6. EZA4xxxx messages

EZA4250E  couldn't do udp_create

Explanation
The svcudp_create() call which creates a UDP-based service transport to which it returns a pointer, was unsuccessful.

System action
Portmapper stops.

Operator response
Inform the system programmer of this message.

System programmer response
Check for storage availability, check that all the udp_create parameters have been correctly specified and restart the program.

Module
PORTMAP

Procedure name
Main()

EZA4251E  couldn't do tcp_create

Explanation
The svctcp_create() call, which creates a TCP-based service transport to which it returns a pointer, was unsuccessful.

System action
Portmapper stops.

Operator response
Inform the system programmer of this message.

System programmer response
Check for storage availability, check that all the tcp_create parameters have been correctly specified, and restart the program.

Module
PORTMAP

Procedure name
Main()
The portmapper process has been initiated. Portmapper is the software that supplies client programs with the port numbers of server programs.

Portmapper continues.

No action is needed.

No action is needed.

PORTMAP

reg_portmapper

svc_run returned unexpectedly

Indicates the procedure that has been called and the address where the call was issued. This message is written to an output file.

Check for the correct PORTMAP specifications in the hlq.PROFILE.TCPIP configuration data set, restart PORTMAP, and run the program again. If the error persists, call the IBM Software Support Center.

PORTMAP

svc_run

portmap: procedure procedure called from address

Indicates the procedure that has been called and the address where the call was issued. This message is written to an output file.
**System action**
Portmapper continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
PORTMAP

**Procedure name**
reg_srv

**EZA4255E svc_sendreply**

**Explanation**
The procedure svc_sendreply(), which is called by the service dispatch routine to send the results of the call to the caller, was unsuccessful.

**System action**
Portmapper stops.

**Operator response**
Inform the system programmer of this message.

**System programmer response**
Check for the correct PORTMAP specifications in the hlq.PROFILE.TCPIP configuration data set, restart PORTMAP, and run the program again. If the error persists, call the IBM Software Support Center.

**Module**
PORTMAP

**Procedure name**
reg_srv

**EZA4256I PORTMAPPER STARTED**

**Explanation**
The UNIX System Services Portmapper issues this message when it has completed initialization and is ready to accept requests.

**System action**
Portmapper continues.

**Operator response**
No action is needed.
System programmer response
No action is needed.

Module
portmap

Procedure name
main(), svc_run()

EZA4257I application STOPPED

Explanation
The UNIX System Services application specified by the application value issues this message just before it exits in response to a stop command from the operator.
In the message text:
application
The name of the application specified.

System action
The application stops.

Operator response
No action is needed.

System programmer response
Restart the application as needed.

Module
portmap or rpcbind

Procedure name
main()

EZA4258I RPCBIND INITIALIZATION COMPLETED AT time ON date

Explanation
The UNIX System Services rpcbind server issues this message when it has completed initialization and is ready to accept requests.
In the message text:
time
The time that the initialization was completed, in local time.
date
The date that the initialization was completed, in local time.

System action
rpcbind continues.
**Operator response**

If *time* and *date* are accurate in local time, no action is required. Otherwise, notify the system programmer.

**System programmer response**

If *time* and *date* do not reflect the current local time and date, correct the configuration and start rpcbind again.

Local time is affected by time zone information such as:

- The TZ environment variable
- The _TZ environment variable
- The LC_TOD category

See the information about building a locale in *z/OS XL C/C++ Programming Guide* for a description of LC_TOD, which is a nonstandard *z/OS C/C++* proprietary locale category. See the information about setting your local time zone in *z/OS UNIX System Services User's Guide*, or the information about customizing a time zone in *z/OS XL C/C++ Programming Guide* for information about customizing the local time zone.

**User response**

No action required.

**Problem determination**

Not applicable.

**Example**

```
EZA4258I RPCBIND INITIALIZATION COMPLETED AT 16:15:48 ON 11/01/05.
EZA4259I RPCBIND BIND() TO stack protocol PORT portnum FAILED ERRNO = errno ERRNO2 = errnojr
```

**Explanation**

The rpcbind server attempted to use the C/C++ bind() API using *protocol* to *stack* on *portnum*. The interface returned -1 with a decimal *errno* and hexadecimal *errnojr*. See the *z/OS XL C/C++* Runtime Library Reference to determine the reason for the returned value of the bind() call. The most common returned value is 1115, EADDRINUSE. This means that another application is listening on the specified port. Use the Netstat command netstat -p stack -P portnum in the *z/OS UNIX* environment, or NETSTAT TCP stack (PORT *portnum* in the TSO environment to determine what application is listening on the specified port.

In the message text:

*stack*

The name of the TCP/IP stack.
**protocol**

The value is either TCP or UDP.

**portnum**

The port number, usually 111, that RPCBIND tried to bind to a socket.

**errno**

The UNIX System Services return code. These return codes are listed in and described in the return codes (errnos) chapter in z/OS UNIX System Services Messages and Codes. The most likely errno value for this error is 1115 for EADDRINUSE.

**errnojr**

The hexadecimal UNIX System Services reason code. The format of the 4-byte reason code is explained in the introduction to the reason codes (errnojrs) chapter of the z/OS UNIX System Services Messages and Codes, where the reason codes are listed. The most likely errnojr value for this error is 0xXXXX7232, JrBindAddrInUsed.

**System action**
rpcbind terminates.

**Operator response**
Contact the system programmer.

**System programmer response**
If the errno is 1115 (EADDRINUSE), use the netstat -P portnum command to determine which application is using the specified port. End the application’s use of the port and restart rpcbind. If the errno is not 1115, see z/OS UNIX System Services Messages and Codes to determine the reason for the returned values. Determine and correct the failure. Restart rpcbind.

If the errno is 1115 for EADDRINUSE, you can use the Netstat command's port report to determine which application is already using port 111. In the following example, the PORTMAP address space already has port 111 and needs to be stopped before starting RPCBIND.

```
netstat -p TCPCS -P 111
MVS TCP/IP NETSTAT CS V1R8 TCP/IP Name: TCPCS 09:06:27
User Id Conn State
---------- ---- -----
PORTMAP 000000A1 Listen
Local Socket: 0.0.0.111
Foreign Socket: 0.0.0.0
PORTMAP 000000A0 UDP
Local Socket: 0.0.0.111
Foreign Socket: *.*
```

```

EZA4260I  UNSUPPORTED MODIFY COMMAND PARAMETER text.

Explanation
The UNIX System Services rpcbind server issues this message when it receives a syntactically incorrect modify request from the MVS operator. A correct modify request is in the form TRACE=keyword. The valid keywords can be found in z/OS Communications Server: IP System Administrator’s Commands.

In the message text:

```
text
```
The unrecognized text entered after the procedure name.

System action
rpcbind continues. The modify request is ignored.

Operator response
Contact the system programmer.

System programmer response
See the information about the MODIFY command -- RPCBIND in z/OS Communications Server: IP System Administrator's Commands to correct the syntax of the modify request.

Example

EZA4260I  F  RPCBIND,TRACE=XXXX  EZA4260I  UNSUPPORTED  MODIFY  COMMAND  PARAMETER  XXXX.

EZA4261I  RPCBIND KEYWORD  keyword  SET  status

Explanation

The UNIX System Services rpcbind server issues this message in response to the MVS modify RPCBIND TRACE request. The message displays the setting of a TRACE keyword. See the information about the MODIFY command -- RPCBIND in z/OS Communications Server: IP System Administrator's Commands to set the keyword.

In the message text:

**keyword**

The type of trace. The values for keyword are FLOW, ERROR, LOG, XDR.

**status**

The value is either ON or OFF.

System action

rpcbind continues.

Operator response

Contact the system programmer.

System programmer response

Verify that the TRACE settings are set correctly. See the information about the MODIFY command -- RPCBIND in z/OS Communications Server: IP System Administrator's Commands to set the keyword.

Example

f rpcbind,trace=

EZA4261I  RPCBIND KEYWORD  FLOW  SET  ON
EZA4261I  RPCBIND KEYWORD  ERROR  SET  ON
EZA4262I  THE RPCBIND PID FILE rpcbind.pid CANNOT BE WRITTEN TO DIRECTORY dir - reason

Explanation
The UNIX System Services rpcbind server issues this message when it tries to write the PID file, rpcbind.pid, to the specified directory. The directory might not exist or it might be mounted as read only.

In the message text:

dir
The directory specified with the rpcbind -i option, or the default directory /etc if no -i option was specified.

reason
The reason the PID file cannot be written to the directory specified by the dir value.

System action
rpcbind stops.

Operator response
Contact the system programmer.

System programmer response
If the specified reason is DIRECTORY DOES NOT EXIST, create the directory using the mkdir command with the specified directory name from the UNIX shell. If the specified reason is DIRECTORY IS READ ONLY, ensure that the file system on which the directory is mounted is read/write. Correct the problem indicated by reason, or use the -i option of the rpcbind command to specify a different directory.

User response

**Example**

```
EZA4263I RPCBIND COULD NOT BE RUN AS NONSWAPPABLE
EZA4264I INCORRECT RPCBIND OPTION option SPECIFIED
```

**Explanation**
The UNIX System Services rpcbind server issues this message when it receives an incorrect option. One possible reason for the error is that options are case sensitive even though messages that appear on the z/OS console are uppercase. Therefore, if an option appears to be correct in a message, verify that the option was specified in the correct case when it was issued.

In the message text:

*option*
The option specified on the rpcbind command.
**System action**
rpcbind stops.

**Operator response**
Contact the system programmer.

**System programmer response**
Restart rpcbind with a valid option. See the information about the **RPCBIND** in *z/OS Communications Server: IP Configuration Reference* for more information.

**User response**
Not applicable.

**Example**

```
EZA4264I INCORRECT RPCBIND OPTION -X SPECIFIED
```

**EZA4265I**  **RPCBIND api FAILED ERRNO = errno ERRNO2 = errnojr**

**Explanation**
The rpcbind server attempted to use the API specified by C/C++. The interface returned -1 with *errno* and *errnojr*.

In the message text:

- **api**
  The failing C/C++ run-time library call name.

- **errno**
  The UNIX System Services return code. These return codes are listed in and described in the return codes (errnos) chapter in *z/OS UNIX System Services Messages and Codes*.

- **errnojr**
  The hexadecimal UNIX System Services reason code. The format of the 4-byte reason code is explained in the introduction to the reason codes (errnojrs) chapter of the *z/OS UNIX System Services Messages and Codes*, where the reason codes are listed.
System action
None.

Operator response
Contact the system programmer.

System programmer response
See z/OS XL C/C++ Runtime Library Reference to determine the reason for the returned value of the specified API. Determine and correct the API failure. Restart rpcbind.

User response
Not applicable.

Problem determination

Example

```
RPCBIND BIND() FAILED ERRNO = 1115 ERRNO2 = 0X74637232
```

EZA4266I LOST STATISTICS FOR PROGRAM = program VERSION = version PROC = proc

Explanation
The rpcbind server received a request to pass a call to another server on the rpcbind host.

The rpcbind server processed the request and tried to save statistics about the call. However, the rpcbind server was not able to save the statistics for that call.

If you use the rpcinfo utility from another host to query the rpcbind server statistics, the statistics reported will not include the program (program), version (version), or procedure (proc) information about this call. Likewise, if a program sends an RPCBPROC_GETSTAT request to the rpcbind server, the statistics reported will not include the program (program), version (version), or procedure (proc) information about this call.

In the message text:

- **program**
  The program number of the target program that was requested.

- **version**
  The version of the program that was requested.
**proc**
The procedure implemented by the program that was requested.

**System action**
Processing of the request completes. Statistics regarding the call are not saved.

**Operator response**
Save the system log for problem determination and contact the system programmer.

**System programmer response**
Obtain the system log and contact the IBM Support Center.
The rpcbind start option, -s, allows you to specify the number of statistics entries per binding protocol that the rpcbind server will maintain. Specifying a larger value for the -s option when starting rpcbind prevents the loss of statistics.

See the information about starting the rpcbind address space in z/OS Communications Server: IP Configuration Guide for more information about the -s parameter.

For more information about the RPCBPROC_GETSTAT request and about statistics regarding rpcbind calls to other servers, see RFC 1833. See Appendix B, “Related protocol specifications,” on page 1247 for information about accessing RFCs.

**Example**
EZA4266I LOST STATISTICS FOR PROGRAM= 200000 VERSION = 3 PROC=12

EZA4267I PARAMETER parameter NOT VALID - VALUE MUST BE IN THE RANGE OF low - high.

**Explanation**
You specified a parameter with a value that is not valid when you started the rpcbind server.

In the message text:
**parameter**  
The name of the specified parameter.

**low**  
The lowest value allowed for the specified parameter.

**high**  
The highest value allowed for the specified parameter.

**System action**  
The rpcbind server exits.

**Operator response**  
Contact the system programmer.

**System programmer response**  
See the information about starting the rpcbind address space in z/OS Communications Server: IP Configuration Guide for more information about the specified parameter. Ensure that the operator specifies a value within the acceptable range when starting the rpcbind server.

**User response**  
Not applicable.

**Problem determination**

**Descriptor code**  
0

**Example**  
```
EZA4267I PARAMETER -s NOT VALID - VALUE MUST BE IN THE RANGE OF 113 - 500.
```

**Explanation**  
The rpcbind server could not establish Event Notification Facility (ENF) support. One of the following occurred:
- RPCBIND could not send an ENF system event indicating that it completed initialization.
- RPCBIND could not register a resource manager to send an ENF system event when RPCBIND ends.

RPC applications that use the ENF system event to determine when the rpcbind server is available might not register with this instance of the rpcbind server.
In the message text:

**ret_code**
Return code from ENF set up

**rsn_code**
Reason code from ENF set up

See ENF event code 80 return and reason codes in z/OS Communications Server: IP and SNA Codes for more information about `ret_code` and `rsn_code`.

**System action**
RPCBIND continues.

**Operator response**
Contact the system programmer.

**System programmer response**
See ENF event code 80 return and reason codes in z/OS Communications Server: IP and SNA Codes for more information about `ret_code` and `rsn_code`. If the problem persists, contact the IBM Support Center with the message.

**User response**
None.

**Problem determination**
See the system programmer response.

EZA4276E get_myaddress: socket

Explanation
The function get_myaddress(), which puts the local host's IP address into the addr parameter, was unsuccessful because of a negative return value received from the socket() system call. The socket() system call creates an endpoint for communication and returns a socket descriptor representing the endpoint.

System action
The calling program ends.

Operator response
No action is needed.
System programmer response
Check for the correct entries declared in the domain, type, and protocol parameters of the socket() call and the addr parameter of the get_myaddress() call, and restart the program. See the z/OS Communications Server: IP Programmer's Guide and Reference for more information.

Module
PMAP@CLN

Procedure name
get_myaddress()

EZA4277E  get_myaddress: ioctl (get interface configuration)

Explanation
The function get_myaddress(), which puts the local host's IP address into addr, was unsuccessful because of a negative return value received from the ioctl() system call. The ioctl() system call controls the operating characteristics of sockets.

System action
The calling program ends.

Operator response
No action is needed.

System programmer response
Check for the correct entries declared in the s, cmd, and arg parameters of the ioctl() system call and the addr parameter of the get_myaddress() call, check that the network interface configuration is defined in an ifconf structure of the IF.H data set, and restart the program. See the z/OS Communications Server: IP Programmer's Guide and Reference for more information.

Module
PMAP@CLN

Procedure name
get_myaddress()

EZA4278E  get_myaddress: ioctl

Explanation
The function get_myaddress(), which puts the local host's IP address into addr, was unsuccessful because of a negative return value received from the ioctl() system call. The ioctl() system call controls the operating characteristics of sockets.

System action
The calling program ends.

Operator response
No action is needed.
System programmer response

Check for the correct entries declared in the s, cmd, and arg parameters of the ioctl() system call and the addr parameter of the get_myaddress() call, check that the network interface flags are defined in an ifreq structure of the IF.H data set, and restart the program. See the z/OS Communications Server: IP Programmer's Guide and Reference for more information.

Module
PMAP@CLN

get_myaddress()

EZA4279E  broadcast: ioctl (get interface configuration)

Explanation
The procedure getbroadcastnets(), which gets the address of a network to broadcast a remote procedure, was unsuccessful because of a negative return code received from the ioctl() system call. The ioctl() call controls the operating characteristics of sockets.

System action
Processing continues.

Operator response
No action is needed.

System programmer response

Check for the correct entries declared in the s, cmd, and arg parameters of the ioctl() system call and the parameters of the clnt_broadcast() call, check that the network interface configuration is defined in an ifconf structure of the IF.H data set, and restart the program. See the z/OS Communications Server: IP Programmer's Guide and Reference for more information.

Module
PMAP@RMT

Procedure name
getbroadcastnets()

EZA4280E  broadcast: ioctl (get interface destination address)

Explanation
The procedure getbroadcastnets(), which gets the address of a network to broadcast a remote procedure, was unsuccessful because of a negative return code received from the ioctl() system call. The ioctl() call controls the operating characteristics of sockets.

System action
Processing continues.

Operator response
No action is needed.
System programmer response
Check for the correct entries declared in the s, cmd, and arg parameters of the ioctl() system call and the parameters of the clnt_broadcast() call, check that the network interface destination address is defined in an ifreq structure of the IF.H data set, and restart the program. See the z/OS Communications Server: IP Programmer’s Guide and Reference for more information.

Module
PMAP@RMT

Procedure name
getbroadcastnets()

EZA4281E  broadcast: ioctl (get interface broadcast address)

Explanation
The procedure getbroadcastnets(), which gets the address of a network to broadcast a remote procedure, was unsuccessful because of a negative return code received from the ioctl() system call. The ioctl() call controls the operating characteristics of sockets.

System action
Processing continues.

Operator response
No action is needed.

System programmer response
Check for the correct entries declared in the s, cmd, and arg parameters of the ioctl() system call and the parameters of the clnt_broadcast() call, check that the network interface broadcast address is defined in an ifreq structure of the IF.H data set, and restart the program. See the z/OS Communications Server: IP Programmer’s Guide and Reference for more information.

Module
PMAP@RMT

Procedure name
getbroadcastnets()

EZA4282E  Cannot create socket for broadcast rpc

Explanation
The procedure clnt_broadcast(), which broadcasts the remote procedure described by prognum, versnum, and procnum to all locally connected broadcast network, was unsuccessful because of a negative return code received from the socket() system call. The socket() call creates an endpoint for communication and returns a socket descriptor representing the endpoint.

System action
An error is returned to the calling program.

Operator response
No action is needed.
System programmer response
Check for the correct entries declared in the clnt_broadcast() and the socket() parameters and restart the program. See the z/OS Communications Server: IP Programmer's Guide and Reference for more information.

Module
PMAP@RMT

Procedure name
clnt广播()

EZA4283E  Cannot send broadcast packet

Explanation
The procedure clnt_broadcast was unsuccessful because of a negative return code received from the sendto() system call. Destruction usually involves freeing private data structures associated with the stream. The sendto() system call sends datagrams on the socket with the descriptor s. This call applies to any datagram socket, whether connected or unconnected.

System action
An error is returned to the calling program.

Operator response
No action is needed.

System programmer response
Check for the correct entries declared in the clnt_broadcast() and the socket() calls and restart the program. See the z/OS Communications Server: IP Programmer's Guide and Reference for more information.

Module
PMAP@RMT

Procedure name
clnt广播()

EZA4284E  Broadcast select problem

Explanation
The broadcast of a remote procedure to all locally connected broadcast network was unsuccessful because of a negative return code received from the select() system call. The select() call monitors activity on a set of sockets to see if any of the sockets are ready for reading, writing, or have an exceptional condition pending.

System action
An error is returned to the calling program.

Operator response
No action is needed.
System programmer response
Check for the correct entries declared in the parameters of the select(), xdr_destroy(), and clnt_broadcast() calls and restart the program. See the z/OS Communications Server: IP Programmer's Guide and Reference for more information.

Module
PMAP@RMT

Procedure name
xdr_destroy()

EZA4285E Cannot receive reply to broadcast

Explanation
The broadcast of a remote procedure to all locally connected broadcast network was unsuccessful because of a negative return code received from the recvfrom() system call. The recvfrom() call receives data on a socket with descriptor s and stores it in a buffer. This call applies to any datagram socket, whether connected or unconnected.

System action
An error is returned to the calling program.

Operator response
No action is needed.

System programmer response
Check for the correct entries declared in the parameters of the recvfrom(), xdr_destroy(), and clnt_broadcast() calls and restart the program. See the z/OS Communications Server: IP Programmer's Guide and Reference for more information.

Module
PMAP@RMT

Procedure name
clnt_broadcast

EZA4286E svc_run: - select failed

Explanation
The function svc_run(), which accepts RPC requests and calls the appropriate service, was unsuccessful because of a negative return code received from select() system call. The select() call monitors activity on a set of sockets to see if any of the sockets are ready for reading, writing, or have an exceptional condition pending.

System action
Svc_run() returns to the caller.

Operator response
No action is needed.
**System programmer response**
Check for the correct entries declared in the `nfds`, `readfds`, `writefds`, `exceptfds`, and `timeout` parameters of the `select()` system call and restart the program. See the z/OS Communications Server: IP Programmer's Guide and Reference for more information.

**Module**
SVC@RUN

**Procedure name**
svc_run()

**EZA4287E svctcp_.c - tcp socket creation problem**

**Explanation**
The function `svctcp_create()`, which creates a TCP-based service transport, was unsuccessful because of a negative return code received from the `socket()` system call. The `socket()` call creates an endpoint for communication and returns a socket descriptor representing the endpoint. When `RPC_ANYSOCK` is specified in the `sock` parameter of the `svctcp_create()` call, a new socket is created. If the socket is not bound to a local TCP port, it is bound to an arbitrary port.

**System action**
An error is returned to the calling program.

**Operator response**
No action is needed.

**System programmer response**
Check for the correct entries declared in the parameters of the `svctcp_create()` and `socket()` calls, and restart the program. See the z/OS Communications Server: IP Programmer's Guide and Reference for more information.

**Module**
SVC@TCP

**Procedure name**
svctcp_create()

**EZA4288E svctcp_.c - cannot getsocketname or listen**

**Explanation**
The function `svctcp_create()`, which creates a TCP-based service transport, was unsuccessful because of a negative return code received from the `getsockname()` or the `listen()` system call. The `getsockname()` call stores the current name for the socket specified by the `s` parameter into the structure pointed to by the `name` parameter. It returns the address of the socket that has been bound. The `listen()` call applies only to stream sockets. This call completes the binding necessary for a socket and it creates a connection request queue to queue incoming connection requests.

**System action**
An error is returned to the calling program.
Operator response
No action is needed.

System programmer response
Check for the correct entries declared in the parameters of the svctcp_create(), getsockname(), and listen() calls, and restart the program. See z/OS Communications Server: IP Programmer's Guide and Reference for more information.

Module
SVC@TCP

Procedure name
svctcp_create()

EZA4289E  svcudp_create: socket creation problem

Explanation
The function svcudp_create(), which creates a UDP-based service transport, was unsuccessful because of a negative return code received from the socket() system call. The socket() call creates an endpoint for communication and returns a socket descriptor representing the endpoint. When RPC_ANYSOCK is specified in the sock parameter of the svcudp_create() call, a new socket is created.

System action
An error is returned to the calling program.

Operator response
No action is needed.

System programmer response
Check for the correct entries declared in the parameters of the svcudp_create() and socket() calls, and restart the program. See the z/OS Communications Server: IP Programmer's Guide and Reference for more information.

Module
SVC@UDP

Procedure name
svcudp_bufcreate()

EZA4290E  svcudp_create - cannot getsocketname

Explanation
The function svcudp_create(), which creates a UDP-based service transport, was unsuccessful because of a negative return code received from the getsockname(). The getsockname() call stores the current name for the socket specified by the s parameter into the structure pointed to by the name parameter. It returns the address of the socket that has been bound.

System action
An error is returned to the calling program.
**Operator response**

No action is needed.

**System programmer response**

Check for the correct entries declared in the parameters of the svcudp_create(), getsockname(), and listen() calls, and restart the program. See the *z/OS Communications Server: IP Programmer's Guide and Reference* for more information.

**Module**

SVC@UDP

**Procedure name**

svcudp_bufcreate()

**EZA4291E broadcast: ioctl (get interface flags)**

**Explanation**

The procedure getbroadcastnets(), which gets the address of a network to broadcast a remote procedure, was unsuccessful because of a negative return code received from the ioctl() system call. The ioctl() call controls the operating characteristics of sockets.

**System action**

Processing continues.

**Operator response**

No action is needed.

**System programmer response**

Check for the correct entries declared in the s, cmd, and arg parameters of the ioctl() system call and the parameters of the clnt_broadcast() calls, check that the network interface flags are defined in an ifreq structure of the IF.H data set, and restart the program. See the *z/OS Communications Server: IP Programmer's Guide and Reference* for more information.

**Module**

PMAP@CLN

**Procedure name**

getbroadcastnets()

**EZA4301E *** Can't initialize resolver.**

**Explanation**

The Domain Name Server was unable to initialize the resolver library routines, which are used by clients to request resolution by the Domain Name Server. This indicates that there was an error in specifying the configuration file for the resolver, or the Domain Name Server was unable to allocate the configuration data set. The default name for the configuration data set is hlq.RESOLV.CONF.

**System action**

Initialization stops. TCPIP continues.
Operator response
Check the syntax of the configuration data set and resubmit the command. If the error persists, specify the configuration options using the NSLOOKUP command and its parameters. For more information about the configuration data set, see z/OS Communications Server: IP Configuration Reference. For more information about the NSLOOKUP command and its parameters, see the z/OS Communications Server: IP System Administrator's Commands.

System programmer response
Make more storage available to the Domain Name Server if necessary.

EZA4302I Usage: command infile command

Explanation
The command line syntax was incorrect; the correct command line syntax is displayed. Command is replaced by the name of this program, RPCGEN, unless the executable’s file name was changed.

System action
RPCGEN exits.

Operator response
Correct the syntax and restart.

System programmer response
No action is needed.

Module
RPCMAIN

Procedure name
Main()

EZA4303I [-c | -h | -l | -m] [-o fn ft fm] [in fn in ft [in fm]]

Explanation
The command line syntax was incorrect. This message indicates the correct syntax for this command.

System action
RPCGEN continues.

Operator response
Enter the command using the correct syntax and try it again. See the z/OS Communications Server: IP User's Guide and Commands for more information.

System programmer response
No action is needed.

Module
RPCMAIN
Procedure name
main()

EZA4304I    command [-c | -h | -l | -m] [-o outfile] [infile]

Explanation
The command line syntax was incorrect. This message indicates the correct syntax for this command.

System action
RPCGEN continues.

Operator response
Enter the command using the correct syntax and try it again. See the z/OS Communications Server: IP User's Guide and Commands for more information.

System programmer response
No action is needed.

Module
RPCMAIN

Procedure name
main()

EZA4306I    command [-s udp | tcp ] * [-o outfile] [infile]

Explanation
The command line syntax was incorrect. This message indicates the correct syntax for this command.

System action
RPCGEN continues.

Operator response
Enter the command using the correct syntax and try it again. See the z/OS Communications Server: IP User's Guide and Commands for more information.

System programmer response
No action is needed.

Module
RPCMAIN

Procedure name
main()

EZA4307E    command: output would overwrite file
**Explanation**
The specified output file would overwrite the input file. The output file name should be different from the input file name.

**System action**
RPCGEN exits.

**Operator response**
Change the output file name and restart.

**System programmer response**
No action is needed.

**Module**
RPCMAIN

**Procedure name**
Open_output()

---

`EZA4308E command: unable to open file rc`

**Explanation**
RPCGEN was unable to open the output file.

**System action**
RPCGEN exits.

**Operator response**
Determine from the error code why the file is unavailable. Possible reasons include: file missing, out of storage, and wrong pointer.

**System programmer response**
No action is needed.

**Module**
RPCMAIN

**Procedure name**
Open_output()

---

`EZA4309E line file, line number: preprocessor error`

**Explanation**
RPCGEN encountered a preprocessor error while searching for the null at the end of the number and spaces. A non-null character was found at the end of the number and spaces.

**System action**
RPCGEN exits.
Operator response
Correct the program and restart; or tell the system programmer about the error.

System programmer response
Correct the program.

Module
RPCSCAN

Procedure name
Docpline()

EZA4310E  line file, line number: constant or identifier expected

Explanation
RPCGEN expected a constant or identifier at this point in the source file.

System action
RPCGEN exits.

Operator response
Correct the program and restart; or tell the system programmer about the error.

System programmer response
No action is needed.

Module
RPCSCAN

Procedure name
Scan_num()

EZA4311E  line file, line number: illegal character in file

Explanation
RPCGEN encountered an incorrect character in the source file.

System action
RPCGEN exits.

Operator response
Correct the program and restart; or tell the system programmer about the error.

System programmer response
Correct the program.
Module
RPCSCAN

Procedure name
Get_token()

EZA4312E line file, line number: unterminated string constant

Explanation
RPCGEN encountered an unterminated string constant. The string should be terminated with a null character (\0 or X'00'). The program could be overwriting data.

System action
RPCGEN exits.

Operator response
Correct the program and restart; or tell the system programmer about the error.

System programmer response
Examine the program data for an unterminated string or an incorrect pointer. Correct the program.

Module
RPCSCAN

Procedure name
Findstrconst()

EZA4313E line file, line number: preprocessor error

Explanation
RPCGEN encountered an error during preprocessing. This message indicates the data set name and the line number where the error occurred.

System action
RPCGE continues.

Operator response
No action is needed.

System programmer response
Correct the line number, specified in this message, in the source data set and restart the program. See the z/OS Communications Server: IP Programmer's Guide and Reference for more information.

Module
RPCSCAN

Procedure name
docplline()
EZA4314E   Too many files!

Explanation
The number of open files exceeds the maximum permitted. The maximum number of files allowed is 4. The program depends upon the C compiler to clear the variable nfiles to 0. If C does not clear nfiles to 0, the message occurs unpredictably.

System action
RPCGEN exits.

Operator response
No action is needed.

System programmer response
If the compiler does not provide a reset to nfiles, add a software reset to nfiles.

Module
RPCUTIL, RPCMAIN

Procedure name
Record_open(), main()

EZA4318E  line file, line number: definition keyword expected

Explanation
RPCGEN expected a definition keyword at this point in the source file.

System action
RPCGEN exits.

Operator response
Correct the source file and restart.

System programmer response
No action is needed.

Module
RPCPARSE

Procedure name
Get_definition()

EZA4319E  line file, line number: illegal result type

Explanation
RPCGEN encountered an incorrect result type, Opaque, on this line of the source file.
**System action**
RPCGEN exits.

**Operator response**
Correct the source file and restart.

**System programmer response**
No action is needed.

**Module**
RPCPARSE

**Procedure name**
Def_program()

---

**EZA4320E   line file, line number: illegal argument type**

**Explanation**
RPCGEN encountered an incorrect argument type, Opaque, on this line of the source file.

**System action**
RPCGEN exits.

**Operator response**
Correct the source file and restart.

**System programmer response**
No action is needed.

**Module**
RPCPARSE

**Procedure name**
Def_program()

---

**EZA4321E   line file, line number: no array-of-pointer declarations — use typedef**

**Explanation**
RPCGEN encountered an incorrect array-of-pointer declaration at this line in the source file. RPCGEN does not allow arrays of pointers, but they can be implemented by means of typedef.

**System action**
RPCGEN exits.

**Operator response**
Do a typedef of the array-of-pointers, or tell the system programmer about the error.
System programmer response
Do a typedef of the array-of-pointers and restart.

Module
RPCPARSE

Procedure name
Get_declaration()

EZA4322E  line file, line number: array declaration expected

Explanation
RPCGEN expected an array declaration at this line of the source file.

System action
RPCGEN exits.

Operator response
Correct the program and restart; or tell the system programmer about the error.

System programmer response
Correct the program.

Module
RPCPARSE

Procedure name
Get_declaration()

EZA4323E  line file, line number: variable-length array declaration expected

Explanation
RPCGEN expected a variable-length array declaration at this point in the source file.

System action
RPCGEN exits.

Operator response
Correct the input program and restart; or tell the system programmer about the error.

System programmer response
Correct the input program.
Procedure name
Get_declaration()

EZA4324E  line file, line number: voids allowed only inside union and program definitions

Explanation
RPCGEN encountered an inappropriate void type at this line in the source file.

System action
RPCGEN exits.

Operator response
Correct the program and restart; or tell the system programmer about the error.

System programmer response
Correct the program.

Module
RPCPARSE

Procedure name
Get_type()

EZA4325E  line file, line number: expected type specifier

Explanation
RPCGEN expected a type specifier at this point in the source file.

System action
RPCGEN exits.

Operator response
Correct the program and restart; or tell the system programmer about the error.

System programmer response
Correct the program.

Module
RPCPARSE

Procedure name
Get_type()

EZA4326I  Program program is not available

Explanation
The program name specified in the prognum parameter of the clntudp_create() procedure is not available. This procedure call creates a client transport handle for the remote program (prognum). UDP is used as the transport.
System action
The system continues.

Operator response
No action is needed.

System programmer response
Specify the correct program name in the progunm parameter of the clntudp_create() procedure call, check that the program name specified is available in storage and resubmit the call. See the z/OS Communications Server: IP Programmer’s Guide and Reference for more information.

Module
RPCINFO

Procedure name
udpping()

EZA4327I  Program number version version is not available

Explanation
The indicated program is not ready.

System action
The system continues.

Operator response
Start the server that uses the required program number.

System programmer response
No action is needed.

Module
RPCINFO

Procedure name
Pmapdump()

EZA4328I  Program number version version ready and waiting

Explanation
The indicated program is ready.

System action
The system continues.

Operator response
No action is needed.
System programmer response
No action is needed.

Module
RPCINFO

Procedure name
Pmapdump()

EZA4329X  Rpcinfo: can't contact portmapper (EZA4329)

Explanation
RPCINFO encountered an error establishing a TCP connection to Portmapper. See z/OS Communications Server: IP and SNA Codes for more information on System Return Codes.

System action
RPCINFO exits.

Operator response
Correct the problem identified in the error response. A typical error is that the Portmapper is not running on the host. Start PORTMAP. PING the host to determine that Portmapper is running and available on the network.

System programmer response
No action is needed.

Module
RPCINFO

Procedure name
Pmapdump(), clnt_call() brdcst(), clnt_broadcast()

EZA4330I  No remote programs registered.

Explanation
No remote programs have been registered on the Portmapper to be retrieved by RPCINFO.

System action
RPCINFO continues.

Operator response
Start a server that registers a procedure on the Portmapper.

System programmer response
No action is needed.

Module
RPCINFO

EZA4xxx messages 419
Procedure name
Pmapdump()

EZA4331E  Usage: rpcinfo -n portnum u host prognum versnum
EZA4332I  rpcinfo -n portnum t host prognum versnum
EZA4333I  rpcinfo p host
EZA4334I  rpcinfo -b prognum versnum

Explanation
The command line syntax is displayed to indicate that the user invoked RPCINFO with incorrect arguments.

System action
RPCINFO exits.

Operator response
Reenter RPCINFO with the correct control parameter syntax.

System programmer response
No action is needed.

Module
RPCINFO

Procedure name
Usage()

EZA4335E  Rpcinfo: service is unknown service

Explanation
The program number specified on the command line does not correspond to a known service.

System action
RPCINFO exits.

Operator response
Correct the program number. Check that the server is running and that it registers the correct number. Rerun.

System programmer response
No action is needed.

Module
rpcinfo

Procedure name
Getprognum(), getrpcbyname()

EZA4336E  Rpcinfo: host is unknown host
You specified an unrecognized host on the RPCINFO command line. The name server might be down. The host name might have been changed to another network. The hlq.HOSTS.LOCAL, hlq.HOSTS.ADDRINFO, or hlq.HOSTS.SITEINFO data sets might be incorrect. You might need to run MAKESITE.

**System action**
RPCINFO exits.

**Operator response**
PING the host. Determine whether the host name is correct and whether the name server is running.

**System programmer response**
Make any necessary changes to the hlq.HOSTS.LOCAL data set and run MAKESITE.

**Module**
RPCINFO

**Procedure name**
Get_net_address(), udpping(), socket() udpping(), tcpping()

---

**EZA4337E**  
Rpcinfo: broadcast failed: rc

**Explanation**
RPCINFO encountered an error issuing a broadcast.

**System action**
RPCINFO exits.

**Operator response**
Use err in the message to determine the probable cause. There are many possible return codes. See clnt_stat in z/OS Communications Server: IP Programmer’s Guide and Reference.

**System programmer response**
No action is needed.

**Module**
RPCINFO

**Procedure name**
Brdcst(), clnt_broadcast()

---

**EZA4338E**  
procedure: out of memory

**Explanation**
The procedure specified was unsuccessful because of insufficient storage allocated for completion.

**System action**
TCPIP continues.
Operator response
Inform the system programmer of this message.

System programmer response
Increase the region size of the application executing the remote procedure call (RPC).

Module
AUTH@UNI, CLNT@TCP, CLNT@UDP, SVC@SIMP, SVC@TCP, SVC@UDP, XDR, XDR@ARRA, XDR@REC, XDR@REFE, XDR@STR

Procedure name
authunix_create(), clnttcp_create(), mem_alloc(), clntudp_bufcreate(), registerrpc(), malloc(), makefd_xprt(), svctcp_create(), svcudp_bufcreate(), xdr_array(), xdr_bytes(), xdr_reference(), xdr_string(), xdrrec_create()

EZA4339E  message

Explanation
The procedure clnt_sperror(), which returns the address of a message indicating why an RPC did not complete, returned the displayed message. This procedure receives pointers previously declared in the clnt parameter of the clnt_create(), clntudp_create(), clnttcp_create(), or clntraw_create() procedures. The clnt parameter is the pointer to a client handle that was obtained using one of the above procedures. Depending on the location where the procedure stopped, only one of these messages will be displayed.

System action
TCPIP continues.

Operator response
Inform the system programmer of this message.

System programmer response
Possible responses for this message are:

<table>
<thead>
<tr>
<th>Message</th>
<th>Response</th>
</tr>
</thead>
<tbody>
<tr>
<td>RPC: Success</td>
<td>None.</td>
</tr>
<tr>
<td>RPC: Can't encode arguments</td>
<td>Check for the correct XDR procedure name in the inproc parameter of the callrpc() call and restart the program.</td>
</tr>
<tr>
<td>RPC: Can't decode result</td>
<td>Check for the correct XDR procedure name in the outproc procedure of the callrpc() call and restart the program.</td>
</tr>
<tr>
<td>RPC: Unable to send</td>
<td>Check for the correct parameter entries in the callrpc() call and restart the program.</td>
</tr>
<tr>
<td>RPC: Unable to receive; errno = value, error list</td>
<td>Check for the correct parameter entries in the callrpc() call and restart the program.</td>
</tr>
<tr>
<td>RPC: Timed out</td>
<td>Restart the program if required.</td>
</tr>
</tbody>
</table>
RPC: Incompatible versions of RPC; low version = version, high version = version
   Check for the correct remote program version number in the versnum parameter of the callrpc() call and restart the program.

RPC: Authentication error; why = reason
   Check for the correct entries in the authentication parameters of the authunix_create() call.

RPC: Authentication error; why = unknown authentication error - value
   Check for the correct entries in the authentication parameters of the authunix_create() call.

RPC: Program unavailable
   Check for the correct program number in the prognum parameter of the callrpc() call, register the program using the registerrpc() call, or contact the remote system administrator to obtain access to the program and restart the program.

RPC: Program/version mismatch; low version = version, high version = version
   Check for the correct remote program number and version in the prognum and versnum parameters of the callrpc() and restart the program.

RPC: Procedure unavailable
   Check for the correct procedure number in the procnum parameter of the callrpc() call and restart the program.

RPC: Server can't decode arguments
   Check for the correct XDR routine in the inproc parameter of the svc_freeargs() call and restart the program.

RPC: Remote system error errcode
   Use the system error code displayed in this message and the list of system error codes in z/OS Communications Server: IP Sockets Application Programming Interface Guide and Reference to determine the cause of the error and inform the remote system administrator.

RPC: Unknown host
   Check for the correct host ID in the host parameter of the callrpc() call and restart the program.

RPC: Unknown protocol
   Check for the transport protocol in the -s transport parameter of the RPCGEN command and verify that both TCP and UDP are specified in the /etc/protocol directory. TCP and UDP are the supported transports. A sample copy of the /etc/protocol directory is shipped in the /usr/lpp/tcpip/samples/protocol directory.

RPC: Port mapper failure
   Check that the tcpip.SEZAINST(ETCRPC) data set contains an entry for the portmapper procedure name and restart the program.

RPC: Program not registered
   Check for the correct program number in the prognum parameter of the svc_register() call. This parameter specifies the program number to be registered.

RPC: Failed (unspecified error)
   Contact the IBM Software Support Center.

RPC: default; sl=value, s2=value, message, message
   Contact the IBM Software Support Center.

See Appendix A, “Additional information about remote procedure call (RPC) messages,” on page 1245 for more information about tcperror return codes. For more information about the RPC and XDR protocols, see the Sun Microsystems publication, Networking on the Sun Workstation: Remote Procedure Call Programming Guide.

Module
CLNT@PER

Procedure name
clnt_sperror

EZA4340E   clnt_raw.c - Fatal header serialization error.
**Explanation**
The procedure call clntraw_create, which creates a dummy RPC client for the remote program, was unsuccessful because a call issued to xdrmem_create() returned an incorrect return code. The xdrmem_create() call initializes an XDR stream in local storage.

**System action**
TCPIP continues.

**Operator response**
Inform the system programmer of this message.

**System programmer response**
Check for the correct remote program number and version in the prognum and versnum parameters of the clntraw_create() call and the parameters specified in the xdrmem_create() call, and restart the program.

**Module**
CLNT@RAW

**Procedure name**
clntraw_create

**EZA4341I**  clnt_tcp: readtcp: read returns=value

**Explanation**
The procedure clnttcp, which creates a remote procedure call (RPC) client transport handle for the remote program specified in the prognum, versnum parameters, has received the specified return value from the readtcp procedure. The readtcp() reads data contained in the TCP data buffer. This procedure is an interface between the external data representation (xdr) serializer and the TCP connection. TCP is used as the transport layer.

**System action**
TCPIP continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
CLNT@TCP

**Procedure name**
readtcp

**EZA4342I**  clnt_tcp: attempting to write number bytes

**EZA4343I**  call name: function: buffer dump
**Explanation**

The procedure clnttcp, which creates a remote procedure call (RPC) client transport handle for the remote program specified in the `prognum`, `versnum` parameters, is trying to write the specified number of bytes received from TCP. These parameters specify the remote program number and the version number of the remote program. This procedure is an interface between the external data representation (XDR) serializer and the TCP connection. TCP is used as the transport layer.

**System action**

TCPIP continues.

**Operator response**

No action is needed.

**System programmer response**

No action is needed.

**Module**

CLNT@TCP

**Procedure name**

readtcp

---

**EZA4344E**  Can't reassign procedure number *procedure*

**Explanation**

The `registerrpc()` call registers a procedure with the local portmapper, and creates a control structure to remember the server procedure and its external data representation (XDR) routine. Because of an incorrect procedure number specified in the `procnun` parameter, this call did not complete.

**System action**

TCPIP continues.

**Operator response**

Inform the system program about this message.

**System programmer response**

Check for the correct procedure number and restart the program. Procedures registered using `registerrpc()` are accessed using the UDP transport layer. See the z/OS Communications Server: IP Programmer's Guide and Reference for more information.

**Module**

SVC@SIMP

**Procedure name**

registerrpc()

---

**EZA4345E**  Couldn't create an rpc server
Explanation
A request to create an RPC server was unsuccessful because of an incorrect pointer declared in the sockp parameter of the svcudp_create() call. This parameter specifies the pointer to the socket associated with the service transport handle. If sockp is RPC_ANYSOCK, a new socket is created. This procedure creates a UDP-based service transport to which it returns a pointer. The UDP transport layer is used to access the procedures registered in the registerrpc() call.

System action
TCPIP continues.

Operator response
Inform the system programmer of this message.

System programmer response
Specify the correct pointer in the sockp parameter of the svcudp_create() call. See the z/OS Communications Server: IP Programmer's Guide and Reference for more information.

Module
SVC@SIMP

Procedure name
registerrpc()

EZA4346E Couldn't register prog number vers number

Explanation
A request to have RPC register this program and version was unsuccessful because portmapper might not be running or sufficient storage might not be available.

System action
TCPIP continues.

Operator response
Inform the system programmer of this message.

System programmer response
Use PING and RPCINFO to determine whether portmapper is running, allocate more storage if necessary, and restart the program. See the z/OS Communications Server: IP Programmer's Guide and Reference for more information.

Module
SVC@SIMP

Procedure name
pmap_unset

EZA4347E svc_sendreply failed
Explanation
The svc_sendreply(), which is called by the service dispatch routine to send the results of the call to the caller, was unsuccessful.

System action
TCPIP continues.

Operator response
Inform the system programmer of this message.

System programmer response
Remove unneeded tasks to free storage, check for an incorrect pointer, or check that storage is sufficient, and restart the program. See the z/OS Communications Server: IP Programmer's Guide and Reference for more information.

Module
SVC@SIMP

Procedure name
universal()

EZA4348E Trouble replying to prog number

Explanation
The procedure svc_sendreply, which is called by the service dispatch routine to send the results of the call to the caller, was unsuccessful because of an incorrect pointer declared in the xprt parameter or not enough storage was allocated for the procedure to complete. The xprt parameter is the pointer to the caller's transport handle.

System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
Specify the correct pointer in the xprt parameter of the svc_sendreply procedure, check whether the task has adequate storage, and restart the program. See the z/OS Communications Server: IP Programmer's Guide and Reference for more information.

Module
SVC@SIMP

Procedure name
universal()

EZA4349E Never registered prog number

Explanation
An attempt was made to communicate with an unregistered program.
System action
TCPIP continues.

Operator response
Inform the system programmer of this message.

System programmer response
Use PING and RPCINFO to determine whether the host is up and the program is registered. If the program is not registered, register it on the target host. See the z/OS Communications Server: IP Programmer’s Guide and Reference for more information.

Module
SVC@SIMP

Procedure name
universal()

EZA4350E  Bad auth_len gid length str length auth length

Explanation
An RPC server received authorization credentials of an incorrect length. Authorization is denied. This message indicates the length specified in the len parameter of the authunix_create() call. This parameter is the length of the information pointed to by aup_gids.

System action
TCPIP continues.

Operator response
Inform the system programmer of this message.

System programmer response
Check for the correct authorization credentials entries in the authunix_create() call and restart the program.

Module
SVC@AUUN

Procedure name
Svcauth_unix()

EZA4351I  xdr_u_long decode gets value, returns value

Explanation
The procedure xdr_u_long(), which translates between C unsigned long integers and their external representations, has been initiated. This message indicates the value that has been decoded.

System action
TCPIP continues.
Operator response
No action is needed.

System programmer response
No action is needed.

Module
XDR

Procedure name
xdr_u_long

**EZA4352I**  xdr_u_long encode adds value, returns value

Explanation
The procedure xdr_u_long(), which translates between C unsigned long integers and their external representations, has been initiated. This message indicates the value that has been encoded.

System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
XDR

Procedure name
xdr_u_long

**EZA4353I**  Alarm called with argument: value; old value = value.

Explanation
A timer has been set by the svc_run function. This message indicates the value supplied to this function for use in a select() system call. When the timeout parameter of the select() call is not a NULL pointer, it specifies a maximum interval to wait for the selection to complete.

System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.
EZA4354I  svc_run: call select with timeout = time

Explanation
The timeout value points to the time to wait for the select() system call to complete. When the timeout parameter is not a NULL pointer, it specifies a maximum interval to wait for the selection to complete. The select call then returns either when a new client request arrives, or when the time value ends, whichever occurs first.

System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

EZA4355I  svc_run: calling select with no timeout.

Explanation
No timeout has been set by the svc_run for the select call. When the timeout parameter is a NULL pointer, the select call blocks until a socket becomes ready.

System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.
EZA4356I  svc_run: select returns value time/NUL

Explanation
Indicates the value of the timeout parameter returned by the select() system call. The select() call monitors activity on a set of sockets to see if any of the sockets are ready for reading, writing, or have an exceptional condition pending. Depending on the value specified only one of these variables will be displayed.

System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
SVC@RUN

Procedure name
svc_run()

EZA4359I  sigsetmask: new mask = value, old mask = value

Explanation
Indicates the value of the old and new masks that have been set by the sigsetmask() function. This function is called when the pointer specified in the timeout parameter of the select() system call expires.

System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
RSIGNAL

Procedure name
sigsetmask

EZA4360I  sigblock: arg = value, new mask = value, old mask = value.

Explanation
The function sigblock, which adds the specified signals to the current mask, has been initiated with the displayed values.
**System action**
TCPIP continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
RSIGNAL

**Procedure name**
sigblock

---

**EZA4361I**  
*rraise: arg = value.*

**Explanation**
The rraise function, which invokes the specified signal handler synchronously, has been initiated. This function is called when the time specified in the timeout parameter of the select() system call returns a value of 0 indicating that a timeout has occurred.

**System action**
TCPIP continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
RSIGNAL

**Procedure name**
rraise

---

**EZA4375E**  
*rexecd: fread: rc*

**Explanation**
An error was detected while the spool data set was being read. This message indicates the return code received for this procedure.

**System action**
Processing continues.

**Operator response**
No action is needed.
System programmer response
Check the REXEC command format when submitting REXEC as a batch job. See the z/OS Communications Server: IP Configuration Reference for more information.

Module
MVRSHD

Procedure name
main

EZA4376E  rshd: remuser too long

Explanation
The user ID specified in the -l userpassword parameter of the RSH command is too long. The connection is closed. The maximum length for this parameter is 15 characters. This parameter specifies the user ID on the remote host.

System action
Processing continues.

Operator response
Check for the correct user ID in the -l userpassword parameter of the RSH command and resubmit the command. See the z/OS Communications Server: IP Configuration Reference for more information.

System programmer response
No action is needed.

Module
MVRSHD

Procedure name
main

EZA4377E  rexecd: username too long

Explanation
The user ID specified in the -l user_id parameter of the REXEC command is too long. The connection is closed. The maximum length for this parameter is 15 characters. This parameter specifies the user ID on the remote host.

System action
Processing continues.

Operator response
Check for the correct user ID in the -l user_id parameter of the REXEC command and resubmit the command. See the z/OS Communications Server: IP Configuration Reference for more information.

System programmer response
No action is needed.
EZA4378E  rshd: username too long

Explanation
The user ID specified in the -l user_id parameter of the REXEC command is too long. The connection is closed. The maximum length for this parameter is 15 characters. This parameter specifies the user ID on the local host.

System action
Processing continues.

Operator response
No action is needed.

System programmer response
Check for the correct user ID in the -l user_id parameter of the REXEC command and resubmit the command. See the z/OS Communications Server: IP Configuration Reference for more information.

EZA4379E  rexecd: password too long

Explanation
The password declared in the -p password parameter of the REXEC command or the -l userpassword parameter of the RSH command is too long. The connection is closed. This parameter specifies the password for the user ID on the remote host. The maximum length is 15 characters.

System action
Processing continues.

Operator response
No action is needed.

System programmer response
Check for the correct password in the -p password parameter of the REXEC command or the -l userpassword parameter of the RSH command and resubmit the command. See the z/OS Communications Server: IP Configuration Reference for more information.
Procedure name
main

EZA4380E  rshd: Host unknown.

Explanation
The IP address of the machine issuing the RSH command could not be resolved to a hostname. getnameinfo() failed.

System action
Processing continues.

Operator response
No action is needed.

System programmer response
Ensure that the IP address and host name of remote clients can be determined by resolver services. Restart the connection if required, and resubmit the command. See the z/OS Communications Server: IP Configuration Reference for more information.

Module

Procedure name
doit

EZA4381I  Accept socket_number from remote_address on local_address

Explanation
The server has accepted a connection on the specified socket from the remote IP address to the local IP address.

In the message text:

socket_number
  The number of the socket from which the connection was being made.

remote_address
  The remote IP address and port number.

local_address
  The local IP address and port number.

System action
Processing continues.

Operator response
No action is needed.

System programmer response
No action is needed.
User response
No action is needed.

Problem determination

EZA4382I Connecting on 4 to 9.44.36.163:3291 from 9.42.105.158:1037

EZA4383I  SSARAY jobid flag

Explanation
The progress of the job is being tracked. This message indicates the job name and the value of the flag. The 2-digit number following the job name is a byte with the following bit pattern:

<table>
<thead>
<tr>
<th>Bit</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Job is currently active</td>
</tr>
<tr>
<td>1</td>
<td>Job is waiting for processing</td>
</tr>
<tr>
<td>1</td>
<td>Job is on the output queue</td>
</tr>
<tr>
<td>1</td>
<td>Job is held in its current queue</td>
</tr>
<tr>
<td>1</td>
<td>Job has a second-level message</td>
</tr>
<tr>
<td>1</td>
<td>Job active in NJE</td>
</tr>
<tr>
<td>11</td>
<td>Unused</td>
</tr>
</tbody>
</table>

System programmer response
No action is needed.

Module
MVRSHD
EZA4384I  SSCTSRT: rc jobname job ID

Explanation
A cancel request has been received. This message displays the return code, the job name, and the job ID of the job currently running or waiting to be run. The job name and ID are the same as the job to be submitted.

System action
Processing continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
MVRSHD

Procedure name
main

EZA4385I  SSSORT(CTRL): rc

Explanation
Displays the return code from an SSSO request with the CTRL bit on. This request is used to tell JES that RSHD is starting to look for output from a job. SSSO is the subsystem option block extension for processing SYSOUT data sets.

System action
Processing continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
MVRSHD

Procedure name
main

EZA4386E  rshd: Permission denied.
Explanation
This message is displayed for one of the following reasons:

- The RSH command issued from the client did not include a valid password.
- The userid.RHOSTS.DATA data set does not exist or was inaccessible to the REXEC Daemon.
- The userid.RHOSTS.DATA data set does not contain the host name and user ID for the client host where the command was issued.

A message is sent to the RSH connection and the connection is closed.

System action
Processing continues.

Operator response
Issue the RSH command with a valid password, or make sure that the userid.RHOSTS.DATA data set exists and contains both the host name and user ID of the client system.

System programmer response
No action is needed.

Module
MVRSHD

Procedure name
Not applicable.

EZA4387I SSSORT(del): rc

Explanation
Displays any nonzero return codes received when output from a previous job, which might be interpreted as output for this job, is found. These files are deleted when found.

System action
Processing continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
MVRSHD

Procedure name
main

EZA4388I SSSORT(fail): rc
Explanation
The output data set could not be opened. The job that was submitted is purged. This message indicates the return code received after this procedure.

System action
Processing continues.

Operator response
Check for the correct parameters declared in the output data set and submit the job again. See the z/OS Communications Server: IP Configuration Reference for more information.

System programmer response
No action is needed.

Module
MVRSHD

Procedure name
main

EZA4389I  SSSORT(init): rc

Explanation
Displays the return code received after looking for the first output to be directed back to the terminal. If there is no output, either this is an old job with the same name, or the output for the correct job is not available yet.

System action
Processing continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
MVRSHD

Procedure name
main

EZA4390I  SSSORT(next): rc

Explanation
Checking to see if there is any more work to be done. This is usually the last message you will see and indicates that the return code was nonzero. The various possibilities for the return code are:

0  Successful completion - request went to the subsystem.
Subsystem does not support this function. This is the one that is expected when there is no more work to do.

Subsystem exists, but is not up.

Subsystem does not exist.

Function not completed - irrecoverable error.

Logical error (for example, incorrect SSOB format, length.)

**System action**

Processing continues.

**Operator response**

If the return code is other than 0 or 4, contact the system programmer.

**System programmer response**

If the return code is other than 0 or 4, determine the cause of the error using the return codes above. If the error persists, contact the IBM Software Support Center.

**Module**

MVRSHD

**Procedure name**

EZA4403I Parameters: MSGCLASS=class, TSCLASS=class, TSOPROC=value, MAXCONN=value,
EXIT=value

Explanation
Indicates the values that have been specified for the parameters of the RXSERVE cataloged procedure. The following list provides a description of these parameters:

EXIT=
Name of user exit routine to inspect and alter JOB and EXEC parameters prior to submission of TSO batch jobs initiated by remote commands.

TSOPROC=
The name of the TSO batch procedure. The default is IKJACCNT. The name IKJACCNT can be modified in the exit routine specified with the EXIT parameter.

MSGCLASS=
The MSGCLASS parameter for TSO batch jobs submitted to execute remote commands. The parameter must not be altered by the EXIT routine.

TSCLASS=
The SYSOUT class for the SYSTSPRT DD statement for submitted jobs. It should be different from the MSGCLASS parameter and the class specified for other SYSOUT data sets in the specified PROC.

MAXCONN=
The maximum number of open sockets at any one time. Usually, each client requires 2 sockets while the command is being processed and the output is being returned. The default is 512.

System action
Processing continues.

Operator response

EZA4404I Parameters: MSGCLASS=class, TSCLASS=class, TSOPROC=value, MAXCONN=value, NOEXIT

Explanation
Indicates the values that have been specified for the parameters of the RXSERVE cataloged procedure. The following list provides a description of these parameters:
EXIT=
Name of user exit routine to inspect and alter JOB and EXEC parameters prior to submission of TSO batch jobs initiated by remote commands. In this case, there is no user exit routine.

TSOPROC=
The name of the TSO batch procedure. The default is IKJACCNT. The name IKJACCNT can be modified in the exit routine specified with the EXIT parameter.

MSGCLASS=
The MSGCLASS parameter for TSO batch jobs submitted to execute remote commands. The parameter must not be altered by the EXIT routine.

TSCLASS=
The SYSOUT class for the SYSTSPRT DD statement for submitted jobs. It should be different from the MSGCLASS parameter and the class specified for other SYSOUT data sets in the specified PROC.

MAXCONN=
The maximum number of open sockets at any one time. Usually, each client requires 2 sockets while the command is being processed and the output is being returned. The default is 512.

EZA4405E rexecd: command line exceeds 246 character limit; request denied.

Explanation
The remote execution server has submitted a job to the MVS system. However, because the command line is longer than 246 characters, the job will fail with a JCL error. The server will not process the requested command.

System action
Processing continues.

Operator response
No action is needed.

System programmer response
Decrease the size of the command to 246 characters or less.

Module
MVRSHD
**Procedure name**
main

**EZA4406I** rexecd: Too many matching jobnames exist for output to be returned.

**Explanation**
An REXEC command was issued to an MVS REXEC server requesting remote execution. Jobnames are formed by concatenating 4 fixed character bytes with the socket number the request was presented on via the REXEC command. When an attempt was made to return the output, a request for a list of matching jobnames was specified. The data area for this request was too small to contain the list of all jobs matching the specification. Output from the job remains on the output spool.

**System action**
Processing continues.

**Operator response**
Determine which jobnames are duplicated and purge the duplicate job output.

**System programmer response**
No action is needed.

**Module**
MVRSHD

**Procedure name**
main.

**EZA4407I** Too many matching jobnames exist for output to be purged.

**Explanation**
An REXEC command was issued to an MVS REXEC server requesting remote execution. Jobnames are formed by concatenating 4 fixed character bytes with the socket number the request was presented on via the REXEC command. When an attempt was made to purge the output, a request for a list of matching jobnames was specified. The data area for this request was too small to contain the list of all jobs matching the specification. Output from the job remains on the output spool.

**System action**

**EZA4413E** rexecd: non-valid parameter JES=x specified JES=2 or JES=3 must be specified.

**Explanation**
JES= was specified in the parameter list to the RECEC server. The JES= parameter only permits JES=2 or JES=3 to be specified.

**System action**
The REXEC server ends execution.

**Operator response**
Restart the REXEC server specifying JES=2 if your facility uses JES2, or JES=3 if your facility uses JES3.

**System programmer response**
Verify the JES= parameter is correct.

**Module**
RSHD

**EZA4414I** rexecd: Initialization using JES=X selected by Y

**Explanation**
This message indicates how the JES= parameter was determined. It could have been specified in the parameter or it could have been automatically detected.

X will be 2 on JES2 or 3 on JES3 systems.

Y will be:
- *Automatic Specification* if JES=x was not specified in the parameters.
- *Parameter Specification* if JES=x was specified in the parameters.

**System action**
The REXEC server continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
RSHD

**EZA4416I** rexecd: Required resources are unavailable to process your request. Please try again later.

**Explanation**
There are currently 9999 rexec jobs running. REXECD cannot submit any more jobs.
System action
Processing continues.

Operator response
Wait and then reissue the REXEC request.

System programmer response
No action is needed.

Module
MVUSHD

Procedure name
main

EZA4418I  rexecd: Required resources are unavailable to process request for userid.

Explanation
There are currently 9999 rexec jobs running. REXECD cannot submit any more jobs.
userid is the user ID of the submitter of the request.

System action
Processing continues.

Operator response
Wait and then reissue the REXEC request.

System programmer response
No action is needed.

Module
MVUSHD

Procedure name
main

EZA4419I  rexecd: function rhosts = fd

Explanation
This is issued when trace is turned on.
function is the function being performed on the rhost file.
fd is the file descriptor of the rhost file.

System action
Processing continues.
Operator response
Wait and then reissue the REXEC request.

System programmer response
No action is needed.

Module

EZA4421E chkpass failed: safrc=rcode1, racfrc=rcode2, racfre=reason

Explanation
The call to the chkpass function failed. Chkpass is called to validate a user ID and password with the system authorization facility (SAF). rcode1 is the system authorization facility return code, rcode2 is the RACF return code, and reason is the RACF reason code. This message is only written to the trace log.

System action
Message EZA4386E will be sent to the RSH client or message EZA4422E will be sent to the REXEC client. The connection to the client will be closed.

Operator response
See response for message EZA4386E if using RSH or EZA4422E if using REXEC.
System programmer response
Check the system authorization facility documentation to determine the cause of the failure. If RACF is installed, check the return codes for RACROUTE REQUEST=VERIFY in the z/OS Security Server RACROUTE Macro Reference.

Module
MVRSHD

Procedure name
main

Explanation
Either the user ID or the password specified for the user ID is not valid on the remote system.

System action
Processing continues.

Operator response
Check the -l and -p parameters on REXEC and make sure that they are correct. If the user ID or the password, or both are being retrieved from a NETRC file, check the user ID and password in the NETRC file.

System programmer response
No action is needed.

Module
MVRSHD

Procedure name
main

Explanation
This message is a continuation of EZA4403I or EZA4404I. It indicates the values that have been specified for the parameters of the RXSERVE cataloged procedure.

purge
The values for purge are Y or N. Y indicates that the job output from the jobs submitted by the server should be purged immediately after the job execution and N indicates that the job output will be held in the output queue.

prefix
A four-character value to be used as the first four characters in the jobname of the jobs that are submitted by the server. The remaining characters of the jobname are a sequential number between 1 and 9999.

ipv6
The values for ipv6 are Y or N. If N is specified, RXSERVE will not attempt to communicate over an IPv6 network. Only connections from IPv4 clients will be accepted. If this parameter is not specified or Y is specified, RXSERVE will attempt to communicate over an IPv6 network.
The values for seclabel are Y or N. If this parameter is not specified or N is specified, RXSERVE does not attempt to add a security label to the job card. If Y is specified, RXSERVE adds a security label (if one exists) to the job card following the message class parameter. For information about using the remote execution server in an MLS environment, see the section on preparing for TCP/IP networking in a multilevel security environment in z/OS Communications Server: IP Configuration Guide.

**Automation**
This message is output to the console.

**Example**
Not applicable.
Explanation
This is a trace message that is issued to indicate that the job is active.

In the message text:

\[ n \]
- The internal array index for the job number.

\[ jobnumber \]
- The job number of the job that is being tracked.

\[ jobstatus \]
- The status returned by JES, which indicates that the job is currently active.

System action
Processing continues.

Example
EZA4436I  SSCSARAY[n]  jobnumber  jobstatus  ACTIVE

EZA4437I  SSCSARAY[n]  jobnumber  jobstatus  WAITING
**Explanation**
This is a trace message that is issued to indicate that the job is on the JES input queue and is waiting to be started.

A job might be in this state for the following reasons:
- A JES initiator was not started to process the submitted job class.
- Other jobs might be running in this class that are preventing this job from starting.

In the message text:

- \( n \) The internal array index for the job.
- \( jobnumber \) The job number of the job that is being tracked.
- \( jobstatus \) The status returned by JES, which indicates the job is waiting.

**System action**
Processing continues.

Example

EZA4437I  SSARAY[0]  JOB00131  40  WAITING

EZA4438I  SSARAY[n]  jobnumber  jobstatus  COMPLETED

Explanation
This is a trace message that is issued to indicate that the job has completed processing.

In the message text:

\( n \)
   The internal array index for the job.

jobnumber
   The job number of the job that is being tracked.

jobstatus
   The status returned by JES, which indicates the job has completed processing.

System action
Processing continues.

Example

EZA4439I SSCSARAY[n] JOB00131 20 COMPLETED

EZA4439I SSCSARAY[n] jobnumber jobstatus HELD

Explanation
This is a trace message that is issued to indicate that the job is on the JES spool and is being held and is not available for processing.
In the message text:

n
The internal array index for the job.

jobnumber
The job number of the job that is being tracked.

jobstatus
The status returned by JES, which is indicates that the job is being held.

**Example**

EZA4440I Closing connection with 9.44.36.163:1023 from 9.42.105.158:514
Explanation
While processing the output for a job, JES returned a 00000004 return code. This trace message is issued to indicate that there is no more output on the JES spool for the specified job. Message EZA4392I that was issued earlier for the same socket identified the job that was being processed.

socket 4: EZA4393I S99ret: 00000000
socket 4: EZA4442I SSSORT(next): 00000004 NO MORE OUTPUT ON JES SPOOL

EZA4443I Attempt to open userid.RHOSTS.DATA requested by user on host

Explanation
MVRSHD server detected an RSH client attempting to use userid.RHOSTS.DATA for authentication.

In the message text:
**userid**
The remote user ID specified by the RSH client to use for execution of the remote command

**user**
The local user ID of the RSH client

**host**
Fully qualified local host name of the RSH client

**System action**
The system continues processing.

```

**EZA4726I**
Usage: rexec -? -d -b tab -l usr -p pwd -n -m -s port -t fn fhost cmd

**Explanation**
This message is the first message of a group of messages that is posted when REXEC is entered without any parameters, with the -? parameter, or under certain conditions that are not valid.
System action
REXEC ends.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
TSOREXEC

Example
Following is the output when executing rexec -?:

```
EZA4726I Usage: rexec  -? -d <tab> -l <usr> -p <pwd> -n -s <port> -t <fn> Fhost cmd
EZA4727I options: -
EZA4728I -? display this message.
EZA4729I -d turn on debug tracing.
EZA4814I -m prefix '09'x to machine control output.
EZA4811I -b <tab> specifies tab value,
EZA4813I valid range 1 - 12 (default 1).
EZA4730I -l <usr> specifies remote userid.
EZA4731I -p <pwd> specifies remote password.
EZA4732I -n prevent automatic login.
EZA4733I -s <port> specifies server port (default 512).
EZA4802I -t <fn> specifies translation table name.
EZA4734I Example: rexec  -d -l guest -p guest hostname ls
```

Procedure name
usage

```
EZA4727I options: -
```

Explanation
This message is part of a group of messages. The first message is EZA4726I. See that message for a complete description of the group.

```
EZA4728I -? display this message.
```

Explanation
This message is part of a group of messages. The first message is EZA4726I. See that message for a complete description of the group.

```
EZA4729I -d turn on debug tracing.
```

Explanation
This message is part of a group of messages. The first message is EZA4726I. See that message for a complete description of the group.

```
EZA4730I -l <usr> specifies remote userid.
```

Explanation
This message is part of a group of messages. The first message is EZA4726I. See that message for a complete description of the group.
EZA4731I -p pwd specifies remote password.

Explanation
This message is part of a group of messages. The first message is EZA4726I. See that message for a complete description of the group.

EZA4732I -n prevent automatic login.

Explanation
This message is part of a group of messages. The first message is EZA4726I. See that message for a complete description of the group.

EZA4733I -s port specifies server port (default 512)

Explanation
This message is part of a group of messages. The first message is EZA4726I. See that message for a complete description of the group.

EZA4734I Example: rexec -d -l guest -p guest hostname ls

Explanation
This message is part of a group of messages. The first message is EZA4726I. See that message for a complete description of the group.

EZA4736I close error con # errconn

Explanation
An error has occurred on the port listed and the port is being closed.

System action
REXEC ends.

Operator response
Message EZA4779I precedes this message and explains what needs to be corrected prior to rerunning the job.

Note: This is a normal message if the foreign host closed the connection, as shown by CONNECTIONstateCHANGED to sending prior to receiving this message.

System programmer response
No action is needed.

Module
REXEC

Procedure name
close

EZA4737I close active con # actconn

Explanation
REXEC is in the process of ending and the port is being closed.
System action
REXEC ends.

Operator response
Message EZA4779I precedes this message and explains what needs to be corrected prior to rerunning the job.

System programmer response
No action is needed.

Module
REXEC

Procedure name
close

EZA4738I getnextnote until DD

Explanation
The program has entered the procedure recv_notices.

System action
REXEC continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
REXEC

Procedure name
recv_notices

EZA4739I SayNotEn(string)

Explanation
This message ID can have any one of several messages. A listing of the messages and their descriptions follows. The operator and system response will vary depending on what the message is. Look at the message and the description to determine the action to take. If you still do not understand the problem contact the IBM Support Center for assistance.

Buffer space available (8680)
This notification is given when buffer space becomes available for a connection on which a TCP send request was previously rejected due to insufficient resources.

Connection state changed (8681)
This notification is given when a TCP connection receives information from the network that causes the state of the connection to change. Such changes arise when the remote client opens, closes, or ends the connection.
Data delivered (8682)
This notification is given when the client buffer indicated in an earlier TcpReceive request now contains data.

User-defined notification (8683)
For use by user-written programs.

Datagram space available (8684)
This notification is given when buffer space becomes available for a datagram on which an IP send request was previously rejected due to insufficient resources.

Urgent pending (8685)
This notification is given when the TCP/IP service is informed by the foreign site that there is urgent data not yet delivered to the client.

UDP datagram delivered (8686)
This notification is given when the client buffer indicated in an earlier UdpReceive request now contains a datagram.

UDP datagram space available (8687)
This notification is given when buffer space becomes available for a datagram on which an UDP send request was previously rejected due to insufficient resources.

Other external interrupt received (8688)
This special notification is returned when a non-VMCF external interrupt arrives for the client. Typically, this external interrupt will be CPexternalCOMMAND and will be interpreted by the client as a directive to abend.

User delivers line (8689)
The user has entered a line of data at the terminal.

User wants attention (8690)
The user has pressed an attention key, such as PF key.

Timer expired (8690)
A timer has expired.

Fsend response (8692)
Response has been received for TcpFSend call.

FReceive error (8693)
This notification is given when a TcpFReceive call resulted in an error, instead of a DATAdelivered notification. Every TcpFReceive call will eventually generate either DATAdelivered or RECEIVEError.

RawIP packets delivered (8694)
This notification is given when the client buffer indicated in an earlier RawIpReceive request now contains data.

RawIP space available (8695)
This notification is given when buffer space becomes available for a datagram on which a RawIpSend request was previously rejected due to insufficient resources.

IUCV interrupt (8696)
This special notification is returned when an IUCV external interrupt arrives for the client.

I/O interrupt (8697)
This notification is given when an I/O interrupt occurs on a device that the client program has specified in a NotifyIo() call.

Resources available for TcpOpen (8698)
This notification is given to a client who previously tried to do TcpOpen but got ZEROresources. When all resources necessary for open are available (TCB and SCB plus incoming and outgoing data buffer), this notice is given.

Resources available for UdpOpen (8699)
Similar to RESOURCESavailable, for TcpOpen.

Ping response or timeout (8700)
Sent when a PING response is received, or when the request times out.

SMSG receive (8701)
Sent when a CP special message (SMSG) is received.
System action
Varies according to the message displayed.

Operator response
Varies according to the message displayed.

System programmer response
Varies according to the message displayed.

Module
REXEC

Procedure name
recv_notices

**EZA4740I**  SayConSt(message_string)

Explanation
This message ID can have any one of several message_strings. A list of message_strings and their descriptions follows. The operator and system programmer response will vary depending on what the message_string is. Look at the message_string and the description to determine the action to take. If you still do not understand the problem contact the IBM Support Center for assistance.

Connection closing (8670)
Data can no longer be transmitted on this connection since the TCP/IP service is in the process of closing down the connection.

Listening (8671)
Waiting for a foreign site to open a connection.

Nonexistent (8672)
The connection no longer exists.

Open (8673)
Data can go either way on the connection.

Receiving only (8674)
Data can be received but not sent on this connection because the client has done a one-way close.

Sending only (8675)
Data can be sent out but not received on this connection. This means that the foreign site has done a one-way close.

Trying to open (8676)
Trying to contact a foreign site to establish a connection.

**Invalid state: ord=ord(STATE) (8679)**
The state was not one of the above.

System action
Varies according to message displayed.

Operator response
Varies according to the message displayed.

System programmer response
Varies according to the message displayed.
**Module**
REXEC

**Procedure name**
recv_notices.

**EZA4742I  Unknown connection state change**

**Explanation**
The CONNECTIONstateCHANGED was not one of the following:

- OPEN
- RECEIVINGonly
- LISTENING
- TRYINGtoOPEN
- SENDINGonly
- CONNECTIONclosing
- NONEXISTENT

**System action**
REXEC continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
REXEC

**Procedure name**
recv_notices

**EZA4743I  Bytes in bytes delivered**

**Explanation**
This message indicates the number of bytes that have been received from a TcpReceive. There will be 1 extra byte per line to account for the carriage return.

**System action**
REXEC continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.
Module
REXEC

Procedure name
recv_notices

**EZA4744I**  \_\_errmsg (msgnum)\_\_ 

**Explanation**
REXEC encountered an error.

`errmsg` is the text of the message that describes the error.

`msgnum` is the 4-digit numeric portion of the message identifier of the **EZA** message whose text is displayed in `errmsg`. For more information about this message, see message EZA\_msgnum. 

**System action**
Varies depending on the message displayed.

**Operator response**
Varies depending on the message displayed.

**System programmer response**
Respond as indicated by the message EZA\_msgnum.

Module
REXEC

Procedure name
recv_notices

**EZA4745I**  \_\_tcpreceive error from errcon\_\_ 

**Explanation**
This message will be preceded by message EZA4744I, which should be consulted to determine the error. This error message is printed when a TcpReceive has been issued and the return code was something other than OK, NOsuchCONNECTION, or REMOTEclose.

**System action**
REXEC continues.

**Operator response**
Varies depending on the message EZA4744I.

**System programmer response**
Varies depending on the message EZA4744I.
**EZA4746I**  tcpreceive error from actconn

**Explanation**
This message will be preceded by message EZA4744, which should be consulted to determine the error. This error message is printed when a TcpReceive has been issued and the return code was something other than OK, NOsuchCONNECTION, or REMOTEclose.

**System action**
REXEC continues.

**Operator response**
Varies depending on the message EZA4744I.

**System programmer response**
Varies depending on the message EZA4744I.

**Module**
REXEC

**Procedure name**
recv_notices.

**EZA4748I**  external interrupt code encountered

**Explanation**
An external interrupt has been received. If an external interrupt is received, the port is closed in preparation for a shutdown.

**System action**
REXEC continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
REXEC

**Procedure name**
recv_notices.

**EZA4749I**  ignoring.
Explanation
If the connection state is not one of the following: CONNECTIONstateCHANGED, DATAdelivered, or EXTERNALinterrupt, then it is ignored.

System action
REXEC continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
REXEC

Procedure name
recv_notices

EZA4750I  unknown notification

Explanation
The connection state message is not one that has been previously defined.

System action
REXEC continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
REXEC

Procedure name
recv_notices.

EZA4751I  Returning from recv_notices

Explanation
The DEBUG option has been specified and processing is complete for the procedure recv_notices.

System action
REXEC continues.
Operator response
No action is needed.

System programmer response
No action is needed.

Module
REXEC

Procedure name
recv_notices

EZA4752I Please enter command (or “quit” to exit)

Explanation
A command needs to be entered for the remote host. If “quit” is entered, then REXEC will end.

System action
REXEC awaits input.

Operator response
Enter a command.

System programmer response
No action is needed.

Module
REXEC

Procedure name
prompt_for_command

EZA4753I PASSWD (host: userid)

Explanation
A password needs to be entered for the user ID on the remote host. If quit is entered, REXEC will end.

System action
REXEC awaits input.

Operator response
Enter the password.

System programmer response
No action is needed.
Module
REXEC

Procedure name
prompt_for_passwd

EZA4754I USERID (fhost: userid)

Explanation
A user ID needs to be entered for the remote host. If quit is entered REXEC will end.

System action
REXEC awaits input.

Operator response
Enter the user ID.

System programmer response
No action is needed.

Module
REXEC

Procedure name
prompt_for_userid

EZA4755I Please enter host name:

Explanation
A remote host name needs to be entered. If quit is entered REXEC will end.

System action
REXEC awaits input.

Operator response
Enter the remote host name.

System programmer response
No action is needed.

Module
REXEC

Procedure name
prompt_for_fhost

EZA4756I Variables have the following assignments:
**Explanation**
The DEBUG option has been specified and the variables that have been entered will be displayed in messages EZA4757I - EZA4760I.

**System action**
REXEC continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
REXEC

**Procedure name**
show_variables

**EZA4757I**  fhost: fhost

**Explanation**

System programmer response
No action is needed.

Module
REXEC

Procedure name
show_variables

EZA4760I command: cmd

Explanation
The DEBUG option has been specified and the command entered is displayed. See message EZA4756I.

System action
REXEC continues.

Operator response
No action is needed.

System programmer response
No action is needed.
Module
REXEC

Procedure name
show_variables

**EZA4761I**   **ALL: theline**

**Explanation**
This is an informational message that displays the line of the NETRC data set that is being read, if DEBUG has been specified.

**System action**
REXEC continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

Module
REXEC

Procedure name
from_netrc

**EZA4762I**   **MACHINE: word**

**Explanation**
This message displays the word following MACHINE in the NETRC data set, if DEBUG has been specified.

**System action**
REXEC continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

Module
REXEC

Procedure name
from_netrc

**EZA4763I**   **LOGIN: word**
**Explanation**

The word following LOGIN in the NETRC data set is displayed if DEBUG has been specified.

**System action**

REXEC continues.

**Operator response**

No action is needed.

**System programmer response**

No action is needed.

**Module**

REXEC

**Procedure name**

from_netrc

---

**EZA4764I**  
**PASSWORD: word**

**Explanation**

This is an informational message that displays the word following PASSWORD in the NETRC data set, if debug is set.

**System action**

REXEC continues.

**Operator response**

No action is needed.

**System programmer response**

No action is needed.

**Module**

REXEC

**Procedure name**

from_netrc

---

**EZA4765I**  
**REJECTED: word**

**Explanation**

This message will be printed if a word is found other than MACHINE and a machine name, LOGIN and login name, and PASSWORD and password. This message will be followed by the following:

EZA4766E  
EZA4726I  
EZA4727I  
EZA4728I
System action
REXEC ends.

Operator response
Correct the user_id.NETREC.DATA data set.

System programmer response
No action is needed.

Module
REXEC

Procedure name
from_netrc

EZA4766I Invalid data set format in netrc_data_set_name

Explanation
During the parameter input data set read procedure, a format error was found in the NETRC_data_set. REXEC does not prompt you for the correct parameter input.

System action
REXEC displays the following group of messages and ends:
EZA4766I

Operator response
Reenter the command with a valid port number.

System programmer response
No action is needed.

Module
REXEC
**Procedure name**
GETPARM

**EZA4770I**  **Unknown option word**

**Explanation**
A parameter was entered that could not be parsed.

**System action**
REXEC prints the following group of messages and ends:

```
EZA4770I
EZA4726I
EZA4727I
EZA4728I
EZA4729I
EZA4730I
EZA4731I
EZA4732I
EZA4733I
EZA4734I
EZA4735I
```

**Operator response**
Reenter the command with valid parameters.

**System programmer response**
No action is needed.

**Module**
REXEC

**Procedure name**
GETPARM

**EZA4771I**  **REXEC: No remote host name given.**

**Explanation**
The host name was not entered.

**System action**
REXEC prints the following group of messages and ends.

```
EZA4771I
EZA4726I
EZA4727I
EZA4728I
EZA4729I
EZA4730I
EZA4731I
EZA4732I
EZA4733I
EZA4734I
```
Operator response
Reenter the command with a valid host name.

System programmer response
No action is needed.

Module
REXEC

Procedure name
GETPARM

EZA4772I parms are parameters

Explanation
When DEBUG is set on it will list the parameters that were passed to REXEC.

System action
REXEC continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
REXEC

Procedure name
GETPARM

EZA4773I REXEC: no command given.

Explanation
This message is displayed if no command was parsed.

**EZA4775I**  Calling function rexec_af with: Host: **aaa** user **bbb**, cmd **ccc**, port **ddd**

Explanation
This message lists the host, user, cmd, and port that are being passed to the rexec_af function that is provided by z/OS UNIX System Services and that does the work of passing the information to the remote server.

**aaa** is the host that the command is being passed to.

**bbb** is the logon ID of the user on the remote system.

**ccc** is the command that is being passed to the remote system.
ddd is the port number.

**System action**
REXEC continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
REXEC

**Procedure name**
REXEC_util

<table>
<thead>
<tr>
<th><strong>EZA4776I</strong></th>
<th>D2 len length</th>
</tr>
</thead>
</table>

**Explanation**
This is the length of the string that is being sent to the remote host.

**System action**
REXEC continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
REXEC

**Procedure name**
REXEC_util

<table>
<thead>
<tr>
<th><strong>EZA4777I</strong></th>
<th>tcpwaitsend errmsg (msgnum)</th>
</tr>
</thead>
</table>

**Explanation**
The function tcpwaitsend encountered an error.

*errmsg* is the text of the message that describes the error.

*msgnum* is the 4-digit numeric portion of the message identifier of the **EZA** message whose text is displayed in *errmsg*. For more information about this message, see message **EZA**msgnum.

**System action**
Varies depending on the message displayed.
Operator response
Varies depending on the message displayed.

System programmer response
Respond as indicated by the message EZAmsgnum.

Module
REXC

Procedure name
REXC_util

EZA4778I returning from REXEC_UTIL

Explanation
The DEBUG option has been entered and the last statement of procedure REXEC_util has been processed.

System action
REXC continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
REXC

Procedure name
REXC_util

EZA4779I errmsg (msgnum)

Explanation
REXC encountered an error.

errmsg is the text of the message that describes the error.

msgnum is the 4-digit numeric portion of the message identifier of the EZA message whose text is displayed in errmsg. For more information about this message, see message EZAmsgnum.

System action
Varies depending on the message displayed.

Operator response
Varies depending on the message displayed.
System programmer response
Respond as indicated by the message EZAmsgnum.

Module
REXEC

Procedure name
REXEC_Client

EZA4780I calling GetHostResol with fhost

Explanation
REXEC is calling GetHostResol to resolve the remote host name to a dotted decimal address.

System action
REXEC continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
REXEC

Procedure name
REXEC_Client

EZA4781I Host fhost Unknown

Explanation
The call to GetHostResol has not resolved the name to a dotted decimal address.

System action
REXEC ends.

Operator response
Reenter the command using a valid remote host name.

System programmer response
No action is needed.

Module
REXEC
Procedure name
REXEC_Client

**EZA4783I  Passive Conn – errmsg (msgnum) on local port localsocket.port**

**Explanation**
If everything is working correctly, Passive Conn – OK on local port port number will be displayed.
errmsg is the text of the message that describes the error.
msgnum is the 4-digit numeric portion of the message identifier of the EZA message whose text is displayed in errmsg. For more information about this message, see message EZAmsgnum.

**System action**
Varies depending on message displayed.

**Operator response**
Varies depending on the message displayed.

**System programmer response**
Respond as indicated by the message EZAmsgnum.

**Module**
REXEC

**Procedure name**
REXEC_Client

**EZA4784I  Unable to open passive port for host host**

**Explanation**
This message precedes message EZA4779I. Consult that message for an explanation of why the port was unable to be opened.

**System action**
REXEC ends.

**Operator response**
Varies depending on the message displayed.

**System programmer response**
Varies depending on the message displayed.

EZA4790I syntax error: unbalanced quotation marks substr(line,position)

Explanation
This message is displayed if a quoted string has been entered and there are unbalanced quotation marks. This message will be followed by the following group of messages:

- EZA4726I
- EZA4727I
- EZA4728I
- EZA4729I
- EZA4730I
- EZA4731I
- EZA4732I
- EZA4733I
- EZA4802I
- EZA4734I

System action
REXEC ends.

Operator response
Correct the quoted string and reenter the command.

System programmer response
No action is needed.

Module
REXEC

Procedure name
TcpQuote

EZA4791I Connecting to fhost

Explanation
The REXEC is attempting to connect to the foreign host name, the foreign host address, and the remote host port given in the message.

System action
REXEC continues.
**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
REXEC

**Procedure name**
REXEC_Client

**EZA4801I**  MVS TCP/IP REXEC version

**Explanation**
The version of REXEC is displayed.

**System action**
TCPIP continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
REXEC

**Procedure name**
GETPARM

**EZA4802I**  -t fn specifies translation table name.

**Explanation**
This is one of a group of messages that is posted when REXEC is entered without any parameters, or with the -? parameter, or under certain conditions that are not valid. The first message is EZA4726I. See that message for a complete description of the group.

**System action**
REXEC ends.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.
Module
REXEC

Procedure name
GETPARM

**EZA4803I** -t option requires one parameter

**Explanation**
A parameter for the -t option was missing or not valid.

**System action**
REXEC prints the following group of messages and ends:

- EZA4803I
- EZA4726I
- EZA4727I
- EZA4728I
- EZA4729I
- EZA4730I
- EZA4731I
- EZA4732I
- EZA4733I
- EZA4802I
- EZA4734I

**Operator response**
Correct or enter the required parameter.

**System programmer response**
No action is needed.

Module
REXEC

Procedure name
GETPARM

**EZA4804I** User specified translation table: table

**Explanation**
The user-specified translation table has been read in and will be used.

**System action**
REXEC continues.

**Operator response**
No action is needed.
System programmer response
No action is needed.

Module
REXEC

Procedure name
GETPARM

EZA4805I  Fails to read User specified translation table: table

Explanation
The translate table that was supplied by the user could not be initialized.

System action
REXEC ends.

Operator response
Verify that the data set that has been specified with the -t option is correctly named and available to the system.
See the information about understanding configuration search orders in z/OS Communications Server: IP Configuration Guide for information about REXEC's data set search order.

System programmer response
No action is needed.

Module
REXEC

Procedure name
GETPARM

EZA4806E  Invalid integer parameter: word

Explanation
The port being read in with the -s option is non-numeric.

System action
REXEC prints the following group of messages and ends.

   EZA4806I
   EZA4726I
   EZA4727I
   EZA4728I
   EZA4729I
   EZA4730I
   EZA4731I
   EZA4732I
   EZA4733I
   EZA4802I
EZA4734I

Operator response
Correct the port parameter.

System programmer response
No action is needed.

Module
REXEC

Procedure name
GETPARM

EZA4807E Invalid port number number

Explanation
The port number read in was not between the range of 1 and 65535.

System action
REXEC prints the following group of messages and ends:
EZA4807I
EZA4726I
EZA4727I
EZA4728I
EZA4729I
EZA4730I
EZA4731I
EZA4732I
EZA4733I
EZA4802I
EZA4734I

Operator response
Correct the port number.

System programmer response
No action is needed.

Module
REXEC

Procedure name
GETPARM

EZA4808E Fails to read standard table
Explanation
An REXEC command was issued from an MVS REXEC client requesting remote execution. The standard translation table used by the client was found; however, it could not be successfully used.

System action
TCPIP continues. The REXEC client command terminates.

Operator response
Reissue the REXEC command. If the problem persists, seek assistance from appropriate system support personnel.

System programmer response
No action is needed.

Module
EZABBO1T

Procedure name
Main.

EZA4809I  Using NETRC file NETRC_data_set

Explanation
The debug option has been specified and the NETRC data set being used is displayed.

System action
REXEC continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
REXEC

Procedure name
from_netrc

EZA4810E  The call to rexec_af() function failed: description rsn = errnojr

Explanation
The call to the rexec_af() function that will pass the information to the remote host failed.

description describes the error.

errnojr is the hexadecimal UNIX System Services Reason Code. The format of the 4-byte Reason Code is explained in the introduction to the Reason Code section of the z/OS UNIX System Services Messages and Codes, where the Reason Codes are listed.
System action
REXEC ends.

Operator response
Examine the command typed and reissue the REXEC command. If the problem persists, contact the system programmer. The most common description is ECONNREFUSED. If this occurs, start the remote execution server on the remote host.

System programmer response
Correct the error indicated by description and errnojr.

Module
REXEC

Procedure name
main()

EZA4811I -b tab specify tab value

Explanation
This message is part of message group for REXEC.
In the message text:

*tab*
  The fixed tab spacing used to align data when the command response contains a tab character. The *tab* value is in the range of 1-12.

System action
The default value of *tab* is 1.

Operator response
Enter a valid value.

System programmer response
No action is needed.

User response
Not applicable.

Problem determination
Not applicable.

This message ID can have any one of several messages. A listing of the messages and their meanings follows. The operator and system programmer response will vary depending on the message displayed. If you still do not understand the problem, contact the IBM Software Support Center for assistance.

**Message**

**Explanation**

**Buffer space available (8680)**
This notification is given when buffer space becomes available for a connection on which a TCP send request was previously rejected due to insufficient resources.

**Connection state changes (8681)**
This notification is given when a TCP connection receives information from the network that causes the state of the connection to change. Such changes arise when the remote client opens, closes, or ends the connection.

**Data delivered (8682)**
This notification is given when the client buffer indicated in an earlier TcpReceive request now contains data.

**User-defined notification (8683)**
For use by user-written programs.

**Datagram space available (8684)**
This notification is given when buffer space becomes available for a datagram on which an IP send request was previously rejected due to insufficient resources.

**Urgent pending (8685)**
This notification is given when the TCPIP service is informed by the foreign site that there is urgent data not yet delivered to the client.

**UDP datagram delivered (8686)**
This notification is given when the client buffer indicated in an earlier UdpReceive request now contains a datagram.

**UDP datagram space available (8687)**
This notification is given when buffer space becomes available for a datagram on which an UDP send request was previously rejected due to insufficient resources.

**Other external interrupt receive (8688)**
This special notification is returned when a non-VMCF external interrupt arrives for the client. Typically, this external interrupt will be CPexternalCOMMAND, which will be interpreted by the client as a directive to abend.
User delivers line (8689)
   The user has entered a line of data at the terminal.

User wants attention (8690)
   The user has pressed an attention key, such as a PF key.

Timer expired (8691)
   A timer has expired.

Fsend response (8692)
   Response has been received for TcpFSend call.

FReceive error (8693)
   This notification is given when a TcpFReceive call resulted in an error, instead of a DATAdelivered notification. Every TcpFReceive call will eventually generate either DATAdelivered or RECEIVEerror.

RawIP packets delivered (8694)
   This notification is given when the client buffer indicated in an earlier RawIpReceive request now contains data.

RawIP space available (8695)
   This notification is given when buffer space becomes available for a datagram on which a RawIpSend request was previously rejected due to insufficient resources.

IUCV interrupt (8696)
   This special notification is returned when an IUCV external interrupt arrives for the client.

I/O interrupt (8697)
   This notification is given when an I/O interrupt occurs on a device that the client program has specified in a NotifyIo() call.

Resources available for TcpOpen (8698)
   This notification is given to a client who previously tried to do TcpOpen but got ZEROresources. When all resources necessary for open are available (TCB and SCB plus incoming and outgoing data buffer), this notice is given.

Resources available for UdpOpen (8699)
   Similar to RESOURCESavailable for TcpOpen.

Ping response or time out (8700)
   Sent when a PING response is received, or when the request times out

SMSG received (8701)
   Sent when a CP special message (SMSG) is received.

System action
   Varies according to the message displayed.

Operator response
   Varies according to the message displayed.

System programmer response
   Varies according to the message displayed.

Module
   RSH

Procedure name
   recv_notices

EZA4990I   SayConSt(string)
Explanation
This message ID can have any one of several messages. A listing of the message and their meanings follows. The operator and system programmer response will vary depending on what the message is. Look at the message and the description to determine the action to take. If you still do not understand the problem contact the IBM Software Support Center for assistance.

Message Explanation
Connection closing
Data can no longer be transmitted on this connection since the TCP/IP service is in the process of closing down the connection.

Listening (8671)
Waiting for a foreign site to open a connection.

Nonexistent (8672)
The connection no longer exists.

Open (8673)
Data can go either way on the connection.

Receiving only (8674)
Data can be received but not sent on this connection, because the client has done a one-way close.

Sending only (8675)
Data can be sent out but not received on this connection. This means that the foreign site has done a one-way close.

Trying to open (8676)
Trying to contact a foreign site to establish a connection.

** Invalid state: ord = ord(STATE) *** (8679)
The state was not one of the above.

EZA5020I  Unknown option word

Explanation
A parameter was entered that could not be parsed.

System action
RSH displays the following group of messages and ends:
  EZA5020I
Operator response
Reenter the command with valid parameters.

System programmer response
No action is needed.

Module
RSH

Procedure name
GETPARM

EZA5022I  parms are parameters

Explanation
When DEBUG is set it will list the parameters that were passed to RSH.

System action
RSH continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
RSH

Procedure name
GETPARM

EZA5025I  Calling function rcmd_af with: Host: AAA user BBB, cmd CCC, port DDD

Explanation
This message lists the host, user, cmd, and port that are being passed to the local rcmd_af function which does
the work of passing the information to the remote server. AAA is the host that the command is being passed to,
BBB is the logon ID of the user on the remote system, CCC is the command that is being passed to the remote
system, and DDD is the port number.
System action
RSH continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
RSH

Procedure name
rsh_util

EZA5026I  D2 len length

Explanation
This is the length of the string that is being sent to the foreign host.

System action
RSH continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
RSH

Procedure name
rsh_util

EZA5027I  tcpwaitsend errmsg (msgnum)

Explanation
The function tcpwaitsend encountered an error.
errmsg is the text of the message that describes the error.
msgnum is the 4-digit numeric portion of the message identifier of the EZA message whose text is displayed in errmsg. For more information about this message, see message EZAmsgnum.

System action
Varies depending on the message displayed.
Operator response
Varies depending on the message displayed.

System programmer response
Respond as indicated by the message EZAmsgnum.

Module
RSH

Procedure name
rsh_util

EZA5029I  errmsg (msgnum)

Explanation
RSH encountered an error.
errmsg is the text of the message that describes the error.
msgnum is the 4-digit numeric portion of the message identifier of the EZA message whose text is displayed in errmsg. For more information about this message, see message EZAmsgnum.

System action
Varies depending on the message displayed.

Operator response
Varies depending on the message displayed.

System programmer response
Respond as indicated by the message EZAmsgnum.

Module
RSH

Procedure name
Rsh_client

EZA5030I  calling GetHostResol with fhost

Explanation
RSH is calling GetHostResol to resolve the foreign host name to a dotted decimal address.

System action
RSH continues.

Operator response
No action is needed.
System programmer response
No action is needed.

Module
RSH

Procedure name
Rsh_client

EZA5031I Host fhost Unknown

Explanation
The call to GetHostResol has failed to resolve the name to a dotted decimal address.

System action
RSH ends.

Operator response
Reenter the command using a valid foreign host name.

System programmer response
No action is needed.

Module
RSH

Procedure name
Rsh_client

EZA5033I Passive Conn - errmsg (msgnum) on local port localsocket.port

Explanation
RSH encountered an error on the indicated connection.

errmsg is the text of the message that describes the error.

msgnum is the 4-digit numeric portion of the message identifier of the EZA message whose text is displayed in errmsg. For more information about this message, see message EZA\msgnum.

System action
Varies depending on the message displayed.

Operator response
Varies depending on the message displayed.

System programmer response
Respond as indicated by the message EZA\msgnum.
EZA5034I Unable to open passive port for host *fhost*

**Explanation**
This message is preceded by message EZA5029I, which should be consulted for an explanation of why the port was unable to be opened.

**System action**
RSH ends.

**Operator response**
Varies depending on the message displayed.

**System programmer response**
Varies depending on the message displayed.

---

EZA5035I passive open complete on port *connection*

**Explanation**
A passive open is complete and the connection state has been changed to LISTENING.

**System action**
RSH continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

---

EZA5036I Active Conn - *errmsg (msgnum)* on local port
Explanation
RSH encountered an error on the indicated connection.

errormsg is the text of the message that describes the error.

msgnum is the 4-digit numeric portion of the message identifier of the EZA message whose text is displayed in errormsg. For more information about this message, see message EZAmsgnum.

System action
Varies depending on the message displayed.

Operator response
Varies depending on the message displayed.

System programmer response
Respond as indicated by the message EZAmsgnum.

Procedure name
show_variables

EZA5051E The call to rcmd_af procedure failed: description rsn = errnojr

Explanation
The call to the rcmd_af procedure that passes the information to the remote host failed.
description describes the error.
ernojr is the hexadecimal UNIX System Services Reason Code. The format of the 4-byte Reason Code is explained in the introduction to the Reason Code section of the z/OS UNIX System Services Messages and Codes, where the Reason Codes are listed.

System action
RSH ends.

Operator response
Examine the command typed and reissue the RSH command. If the problem persists, contact the system programmer. The most common description is ECONNREFUSED. If this occurs, start the remote shell server on the remote host.

System programmer response
Correct the error indicated by description and errnojr.

Module
RSH

Procedure name
main()

EZA5058I -b tab specify tab value

Explanation
This message is part of a message group for RSH.

System action
The client exits.

Operator response
Enter a valid value.

System programmer response
No action is needed.
**User response**
Not applicable.

**Problem determination**

**EZA5061I**  Using user-specified translation table: `hlq.mlq.TCPXLBIN`

**Explanation**

The Debug option was specified and the REXEC client is using the user-specified translation table.

In the message text:

- **hlq**
  - The high-level qualifier name used for the translation table.

- **mlq**
  - The middle-level qualifier name used for the translation table.

**System action**

The REXEC client uses the user-specified translation table for all data output.

**Operator response**

Not applicable.

**System programmer response**

Not applicable.

**User response**

Verify that the correct translation table data set is being loaded and used. If the correct table is not being loaded, change the configuration so that the correct translation table data set is available to the REXEC client. See the information about understanding configuration search orders in z/OS Communications Server: IP Configuration Guide for information about searching for translation table data sets.

Procedure name
OpenOutputStream

EZA5131I  NJE Domain Name: domain name

Explanation
Displays the name of the NJE domain if SMTP is running as a mail gateway. To change this name, edit the NJEDOMAIN statement in hlq.SMTP.CONFIG. The default name is the null string. For more information on the NJEDOMAIN statement, see the z/OS Communications Server: IP Configuration Reference.

System action
SMTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.
This message was deleted in z/OS V2R3.

**Explanation**

A large record that contains at least 1024 bytes was detected in the spool job. The implementation of SMTP is limited to processing 1024 bytes of data.

The mail RFC 821 limits the number of bytes on a data line to 998 bytes (excluding the carriage return and line-feed characters). These long lines of data might get truncated by the remote SMTP server, depending on its implementation.

In the message text:

- **mm/dd/yy**
  The current date in month/day/year format.

- **hh:mm:ss**
  The current time in hours:minutes:seconds format.

- **spoolid**
  The spool job identifier.

EZA5132I 03/08/10 13:53:00 Large record detected in spool job JOB00035

EZA5133I Local Delivery Format: punch/netdata

Explanation
Displays the spool data set format for mail delivery to recipients on the local host. To change the format, change
the LOCALFORMAT statement in hlq.SMTP.CONFIG. There are 2 choices for the format: NETDATA and PUNCH.
The default format is NETDATA. For more information on the LOCALFORMAT statement, see the z/OS
Communications Server: IP Configuration Reference.

System action
SMTP continues.

Procedure name
OpenOutputStream

EZA5135I Possible configuration conflict: RESOLVERUSAGE setting is YES and IPMAILERADDRESS is set.

Explanation
The default value of the RESOLVERUSAGE statement is YES and that is its current setting. If you set the RESOLVERUSAGE statement to YES, the IP address specified in the IPMAILERADDRESS statement is used only when SMTP queries a Domain Name Server (DNS) and no IP addresses are returned. If the DNS query returns IP addresses, then those addresses are used instead of the specified IP address.

System action
SMTP continues.

Operator response
Not applicable.

System programmer response
If you use the IPMAILERADDRESS parameter to send all your mail to a specific IP address, you must specify NO on the RESOLVERUSAGE statement in the SMTP configuration file. See the descriptions of these statements in z/OS Communications Server: IP Configuration Reference and ensure that the statements are set correctly for your environment.

**EZA5162E** **Invalid Address for Mailer: address**

**Explanation**
The length of the user ID for the receiving address exceeds 8 characters, which is the maximum allowable MVS user ID length for the MAILER option.

**System action**
SMTP continues.

**Operator response**
No action is needed.

**System programmer response**
Correct the entry in the configuration data set, and restart SMTP.

---

**Module**
SMTP

**Automation**
This message was deleted in z/OS V2R3.

**Procedure name**
ProcessConfigFile

**EZA5163E** **Invalid Max Mail Bytes: parameter**

**Explanation**
The indicated parameter for the MAXMAILBYTES option was not a positive integer between 1 and 2,147,483,647.

**System action**
SMTP continues.

**Operator response**
No action is needed.

**System programmer response**
Correct the configuration data set, and restart SMTP.
Invalid Post Master Userid: userid

Explanation
The indicated user ID does not exist for the POSTMASTER option in the configuration data set.

System action
SMTP ends.

Operator response
See the system programmer response.

System programmer response
Check that this user ID exists. Otherwise, correct the SMTP configuration data set, specifying a valid user ID, and restart SMTP.

Invalid Badspoolfileid Userid: userid

Explanation
The reason for this message can be one of the following:
• The indicated user ID does not exist for the BADSPOOLFILEID option in the configuration data set.
• The indicated user ID does not have proper authority.

System action
SMTP continues.

Operator response
No action is needed.
System programmer response
Check that this user ID exists.
• If the user ID does not exist, correct the SMTP configuration data set, specifying a valid user ID, and restart SMTP.
• If the user ID does exist and RACF (or similar product) is used, ensure that the user ID has a security profile with create authority.

Procedure name
ProcessConfigFile

EZA5169E Invalid MailFileDSPrefix Option: option

Explanation
When editing the MAILFILEDSPREFIX statement in hlq.SMTP.CONFIG, the name can have a maximum of 20 characters. The characters must be either alphanumeric, or one of the following symbols: period (.), dollar sign ($), number sign (#), or at sign (@), and the name must meet data set name conventions. The default name for this prefix, used in place of the incorrect name, is the job that is running SMTP. For more information, see the z/OS Communications Server: IP Configuration Reference.

System action
SMTP continues.

Operator response
Correct the prefix name in the MAILFILEDSPREFIX statement to one that follows the guidelines specified above.

System programmer response
Assist the user as necessary.

**Procedure name**
OpenOutputStreams

**EZA5177E**   Invalid LocalClass Option: class

**Explanation**
The class specifies the spool class for local mail delivered by SMTP. The class specified in hlq.SMTP.CONFIG is more than 1 character long.

**System action**
SMTP continues.

**Operator response**
Change the LOCALCLASS statement in hlq.SMTP.CONFIG to a single character. This option is site-dependent. Ask the system administrator for site-dependent information.

**System programmer response**
Provide the user with site-dependent information as necessary. The default setting for the LOCALCLASS statement is B.

**Module**
SMTP
Automation

This message was deleted in z/OS V2R3.

Procedure name

Error

**EZA5178E**  Invalid NJEClass Option: *class*

Explanation

More than 1 character was specified in the NJECLASS statement of *hlq.SMTP.CONFIG*. There can only be a single character specified. The NJECLASS statement specifies the spool class for mail delivered by SMTP to the NJE network. This option is site-dependent. Check with the system administrator for site-dependent information.

System action

SMTP continues.

Operator response

Change the NJECLASS option in *hlq.SMTP.CONFIG* to a single character specified by the system administrator. For more information on the NJECLASS statement, see the z/OS Communications Server: IP Configuration Reference.

System programmer response

Provide the user with site-dependent information as necessary. The default setting for the LOCALCLASS statement is B.

Module

SMTP

Automation

This message was deleted in z/OS V2R3.

Procedure name

Error

**EZA5179I**  Debugging Enabled: *yes/no*

Explanation

Causes SMTP to record SMTP commands and replies in the data set specified in the SYSDEBUG DD statement. The SMTP connection number is recorded along with each SMTP command or reply. To change the data set pointed to, change the SYSDEBUG statement in SEZAINST(SMTPPROC). For more information on the DEBUG statement and the SYSDEBUG DD statement, see the z/OS Communications Server: IP Configuration Reference.

System action

SMTP continues.

Operator response

No action is needed.

Example
The following example is taken from the output file associated with the SMTP started task:

<table>
<thead>
<tr>
<th>Message ID</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>EZA5317I</td>
<td>Listen on Address</td>
</tr>
<tr>
<td>EZA5139I</td>
<td>Port for Server SMTP: 25</td>
</tr>
<tr>
<td>EZA5191I</td>
<td>REMOTEPORT for SMTP client: 2000</td>
</tr>
</tbody>
</table>

In this example, the SMTP client will send mail to port 2000 and the local SMTP server will listen on port 25.

EZA5192E INCORRECT REMOTEPORT SPECIFIED: number

Explanation
The number value displayed is the incorrect value, which was specified on the REMOTEPORT statement coded in the SMTP configuration file. This value represents the remote port number that the SMTP client uses to connect to an SMTP server for sending outbound mail. The value specified must be a decimal number in the range 1 - 65534.

In the message text:

**number**

The incorrect value that was specified on the REMOTEPORT statement.

System action
SMTP ends.

Operator response
Contact the system programmer.

System programmer response
Check the SMTP configuration file. On the REMOTEPORT statement, specify a decimal number in the range of 1 - 65534. See the information about the REMOTEPORT statement in z/OS Communications Server: IP Configuration Reference for more information.

User response
Not applicable

Problem determination
See the system programmer response.

**Procedure name**

NoSuchCommand

**EZA5196I  mm/dd/yy hh:mm:ss connection_number command_line**
Explanation
This message is written to the debug data set and is normally accompanied by message EZA5200I. The DEBUG statement is present in hlq.SMTP.CONFIG; SMTP is writing the command read to the data set specified by SYSDEBUG DD in SEZAINST(SMTPPROC) from a JES spool file created by the user. The DEBUG statement causes SMTP to record all commands and replies to a data set.

To turn the DEBUG statement on or off, include or exclude the statement in hlq.SMTP.CONFIG. See the information about the DEBUG statement in z/OS Communications Server: IP Configuration Reference. Also, a privileged user can turn DEBUG mode on and off interactively by using the SMSG SMTP DEBUG/NODEBUG commands. See the information about the SMSG SMTP command for the privileged user in z/OS Communications Server: IP User's Guide and Commands.

Tip: Connection number 257 represents the communication between SMTP and the MVS JES spool.

EZA5205E mm/dd/yy hh:mm:ss IPMAILERNAME CANNOT BE RESOLVED TO AN IP ADDRESS

Explanation
The IPMAILERNAME statement is coded in the SMTP configuration file. When SMTP starts processing mail, the name that is specified on this statement is resolved to the IP address that is used for forwarding the mail. This message is issued when the name cannot be resolved to IP addresses.

In the message text:
System action
SMTP stops.

Operator response
Contact the system programmer.

System programmer response
Correct the configuration problem and restart SMTP.

User response
Not applicable.

Problem determination
Check the SMTP log file for the following log message:
EZA5228I Name Resolution Method : method
• If method is Host Tables, ensure that your local host table includes the name you coded on the IPMAILERNAME statement. Log message “EZA5508I” on page 669 indicates the name that is being searched for in the host table. Verify that the name in the host table matches the one in the SMTP configuration file.
• If method is Nameserver, ensure that the name server that is being queried by SMTP is correct and resolves the name you coded on the IPMAILERNAME statement. Run Trace Resolver to see whether the name is resolved. For more information about Trace Resolver, see the z/OS Communications Server: IP Diagnosis Guide.
• If method displayed in message “EZA5228I” on page 576 is not what you expected, examine the TCP.DATA file that is being used by SMTP. Correct the resolution method that is specified in the TCP.DATA file that SMTP uses.

For more information about SMTP name resolution, see the z/OS Communications Server: IP Diagnosis Guide.

EZA5208E mm/dd/yy hh:mm:ss DNS response was truncated so a name cannot be resolved

Explanation

SMTP received a response to a domain name server (DNS) query. The response was truncated because it was too large to fit in a UDP packet. SMTP supports only the UDP protocol for name resolution. Because the DNS response was incomplete, it was discarded. As a result, the mail messages remain on the resolver queues and will be retried. This message will be generated only the first time the situation is detected.

In the message text:

mm/dd/yy
The date (month/day/year) when the DNS response was received.

hh:mm:ss
The time (hours:minutes:seconds) when the DNS response was received.

System action

SMTP continues.

Operator response

None.

System programmer response

Contact the administrators for the DNS and inform them of the problem. If the problem can be resolved at the DNS, SMTP will automatically recover because it will try the DNS query again. The retry time of the DNS query depends on your SMTP configuration setting. See the RESOLVERRETRYINT statement in z/OS Communications Server: IP Configuration Reference.

If you are using the IPMAILERNAME statement and the problem cannot be resolved at the DNS, you can switch to using the IPMAILERADDRESS statement until the DNS is modified. If you do switch to the address indicated by the IPMAILERADDRESS statement and you want all the mail sent to that address, set the RESOLVERUSAGE statement to NO. See the SMTP configuration statements IPMAILERNAME and IPMAILERADDRESS in z/OS Communications Server: IP Configuration Reference.

You can determine whether the problem is resolved by entering the TSO command SMSG <SMTP_STARTED_TASK_NAME> QUEUE. If the problem is resolved, the number of mail messages on the resolver queues will decrease.
User response
Not applicable.

Problem determination
If you are using multiple DNS servers, you might need to determine which server returned this response. You can
dynamically activate resolver traces by entering the TSO command SMSG <SMTP_STARTED_TASK_NAME> TRACE.
Review the resolver traces in the SMTP output file. Look for message EZA5526I, which contains the DNS
query number, to determine which DNS is issuing this response and what name is being resolved.

Procedure name
Error

EZA5220I  mm/dd/yy hh:mm:ss connection number: Ignoring Data/Commands received after QUIT

Explanation
The quit command has been entered, and SMTP is in the process of closing the connection, so the commands issued after it is ignored.

In the message text:

mm/dd/yy  The current date in the month/day/year format.
**hh:mm:ss**
The current time in the hours:minutes:seconds format.

**System action**
SMTP continues closing the connection.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
SMTP

**Automation**
This message was deleted in z/OS V2R3.

**Procedure name**
MarkForExpirationCheck

**EZA5221I mm/dd/yy hh:mm:ss NonExistent: rc**

**Explanation**
The connection no longer exists for the specified return code reason. The connection could have been dropped because of a software error on the remote SMTP server or because of a routing or connectivity problem in the internet network.

In the message text:

**mm/dd/yy**
The current date in the month/day/year format.

**hh:mm:ss**
The current time in the hours:minutes:seconds format.

**System action**
SMTP continues.

**Operator response**
No action is needed.

**System programmer response**
Normally, no action is necessary. The mail is delivered automatically at a later time when connectivity is restored. If the error persists, check for a software error in the remote SMTP server or for an error in the piece of mail itself. For example, if a user tries to send a binary piece of SMTP mail, some hosts' SMTP servers malfunction or abnormally close the connection.

**Module**
SMTPEVNT
Automation
- This message was deleted in z/OS V2R3.

Procedure name
- CloseCompletedEvent

**EZA5222I** StoreData: entering “discard” mode

**Explanation**
SMTP sends the message to the local console to show that the sender’s mail data set exceeded the maximum length specified by the MAXMAILBYTES option in the hlq.PROFILE.TCPIP data set. The excessively large mail data set is erased. This message is issued before the message that confirms the erasing of the data set.

**System action**
SMTP continues.

**Operator response**
No action is needed.

**System programmer response**
Tell the sender to shorten the mail data set or to subdivide the data set into shorter data sets that are within the existing MAXMAILBYTES limitation. Increase the MAXMAILBYTES option value in the SMTP.CONFIG configuration data set, and tell the sender to try again.

**Module**
SMTPEVNT

Automation
- This message was deleted in z/OS V2R3.

Procedure name
- StoreData

**EZA5223I** StoreData: leaving “discard” mode

**Explanation**
SMTP sends this message to the local console to show that the sender’s mail data set exceeded the maximum length specified by the MAXMAILBYTES option in the hlq.PROFILE.TCPIP data set. This message also verifies that an attempt was made to return a message to the mail sender to inform the sender of a configuration problem on the receiving machine. The mail data set being processed is discarded.

**System action**
SMTP continues.

**Operator response**
No action is needed.
**System programmer response**

Tell the sender to shorten the mail data set or to subdivide the data set into shorter data sets that are within the existing MAXMAILBYTES limitation. Increase the MAXMAILBYTES option value in the SMTP.CONFIG configuration data set, and tell the sender to try again.

**Module**

SMTPEVNT

**Automation**

- This message was deleted in z/OS V2R3.

**Procedure name**

OpenOutputStreams

**EZA5228I Name Resolution Method method**

**Explanation**

This message displays the method that SMTP uses for name resolution. The method selected is dependent on the value associated with the RESOLVERUSAGE statement in the SMTP configuration file and whether the NSINTERADDR statement is coded in the TCPIP.DATA file for a name server.

`method` is one of the following:
Host Tables
Indicates that RESOLVERUSAGE is YES and no name server is configured in the TCPIP.DATA file.

Nameserver, Port \texttt{port\_number}
Indicates that RESOLVERUSAGE is YES and one or more name servers are configured in the TCPIP.DATA file. \texttt{port\_number} is the port number of the name server.

IPMAILERADDRESS or MAILER statement
Indicates that RESOLVERUSAGE is NO. The mail is directed to either to the IP address associated with the IPMAILERADDRESS statement or to the mailer associated with the MAILER statement in the SMTP configuration file.

Procedure name

OpenOutputStreams

EZA5235I  RCPT TO: response delay : seconds seconds

Explanation

Displays how long the SMTP server delays responding to the RCPT commands from the sender SMTP, while it is waiting for domain name resolution. If resolution does not occur before the specified time, the server assumes the name resolution is successful and queues the recipient address for asynchronous resolution. SMTP also sends the following message to the sender SMTP: 250 ok. The mail is returned to the sender if SMTP later determines that the recipient address cannot be resolved. To change this delay, change the RCPTRESPONSEDELAY statement in SMTP.SMTP.CONFIG. For more information on the RCPTRESPONSEDELAY statement, see the z/OS Communications Server: IP Configuration Reference.

Procedure name
DoFinalChecks

EZA5288E Invalid value minutes specified for ResolverRetryInt. Default used.

Explanation
An incorrect value was used for the RESOLVERRETRYINT statement in hlq.SMTP.CONFIG. This statement specifies the number of minutes SMTP waits between attempts to resolve domain names. The value for the RESOLVERRETRYINT statement must be between 0 and 1440 minutes. SMTP uses 20 minutes for the value of the RESOLVERRETRYINT statement. For more information on the RESOLVERRETRYINT statement, see the z/OS Communications Server: IP Configuration Reference.

System action
SMTP continues.

Operator response
Change the RESOLVERRETRYINT statement in hlq.SMTP.CONFIG.

System programmer response
No action is needed.

Module
SMTP

Automation

This message was deleted in z/OS V2R3.

Procedure name
DoFinalChecks

EZA5289E Invalid value value specified for RcptResponseDelay. Default used.

Explanation
The error is caused either by an incorrect value of less than 0 or greater than 86 400, or because NSInterAddr is not coded in the TCPIP.DATA data set. SMTP uses a default of 60.

System action
SMTP continues.

Operator response
No action is needed.

System programmer response
Correct the SMTP configuration data set or the TCPIP.DATA data set.
Module
SMTP

Automation
This message was deleted in z/OS V2R3.

Procedure name
ProcessConfigFile

EZA5290E Invalid value seconds specified for TempErrorRetries. Default used.

Explanation
The value of the TEMPERRORRETRIES statement in hlq.SMTP.CONFIG must be either 0 or positive. This statement specifies the number of times SMTP tries to redeliver mail to a host with a temporary problem. SMTP uses the default value for the TEMPERRORRETRIES statement.

System action
SMTP continues.

Operator response
Correct the TEMPERRORRETRIES statement only when mail servers repeatedly terminate abnormally or hang SMTP mail transactions. If a change is necessary, change the TEMPERRORRETRIES statement in hlq.SMTP.CONFIG. For more information on the TEMPERRORRETRIES statement, see the z/OS Communications Server: IP Configuration Reference.

System programmer response
No action is needed.

Module
SMTP

Automation
This message was deleted in z/OS V2R3.

Procedure name
DoFinalChecks

EZA5294E Invalid value value specified for Inactive.

Explanation
The value for the INACTIVE statement was less than 0. This statement specifies the number of seconds of inactivity after which SMTP considers the connection dead. After the specified amount of inactive time, SMTP closes the connection. SMTP continues using the default value for the INACTIVE statement.

System action
SMTP continues.
Operator response
Change the INACTIVE statement in hlq.SMTP.CONFIG to a valid positive number. For more information on the INACTIVE statement, see the z/OS Communications Server: IP Configuration Reference.

System programmer response
No action is needed.

Module
SMTP

Automation
This message was deleted in z/OS V2R3.

Procedure name
Error

EZA5295E   Invalid value seconds specified for FinishOpen.

Explanation
The FINISHOPEN statement specifies the number of seconds SMTP waits while trying to establish a connection to a remote site. After the specified number of seconds, SMTP ends the connection. The parameter for this statement must be between 1 and 86 400 seconds. The default value for this statement is 120 seconds. For more information on the FINISHOPEN statement, see the z/OS Communications Server: IP Configuration Reference.

System action
SMTP continues.

Operator response
Change the FINISHOPEN statement in hlq.SMTP.CONFIG.

System programmer response
No action is needed.

Module
SMTP

Automation
This message was deleted in z/OS V2R3.

Procedure name
Error

EZA5296E   Invalid value number for RetryAge.

Explanation
The RETRYAGE statement in hlq.SMTP.CONFIG must be positive. This statement specifies the number of days after which SMTP returns mil as undeliverable. SMTP uses the default value for the RETRYAGE statement, which
is 3 days. For more information on the RETRYAGE statement and hlq.SMTP.CONFIG, see the z/OS Communications Server: IP Configuration Reference.

System action
SMTP continues.

Operator response
Change the RETRYAGE statement in hlq.SMTP.CONFIG to a correct value.

System programmer response
No action is needed.

Module
SMTP

Automation
This message was deleted in z/OS V2R3.

Procedure name
Error

EZA5297E Invalid value minutes specified for RetryInt.

Explanation
The RETRYINT statement in hlq.SMTP.CONFIG must contain a positive value. This statement specifies the number of minutes SMTP should wait between attempts to deliver mail to a TCP host that is down. The range of correct values for the RETRYINT statement is 0 and 1440 minutes. SMTP uses the default for the RETRYINT statement, which is 20 minutes. For more information on the RETRYINT statement and hlq.SMTP.CONFIG, see the z/OS Communications Server: IP Configuration Reference

System action
SMTP continues.

Operator response
Change the RETRYINT statement in hlq.SMTP.CONFIG to a correct value.

System programmer response
No action is needed.

Module
SMTP

Automation
This message was deleted in z/OS V2R3.

Procedure name
Error

EZA5298E Invalid value minutes specified for ResolverRetryInt.
Explanation
The value for the RESOLVERRETRYINT statement must be a positive number. This statement specifies the number of minutes SMTP waits between attempts to resolve domain names. SMTP uses the default value for the RESOLVERRETRYINT statement, which is 20 minutes. For more information on the RESOLVERRETRYINT statement, see the z/OS Communications Server: IP Configuration Reference.

System action
SMTP continues.

Operator response
Change the RESOLVERRETRYINT statement in hlq.SMTP.CONFIG to a positive, correct value.

System programmer response
No action is needed.

Module
SMTP

Automation
This message was deleted in z/OS V2R3.

Procedure name
Error

EZA5299E Invalid value number specified for RcptResponseDelay

Explanation
The value for the RCPTRESPONSEDELAY statement must be positive. This statement specifies how long the SMTP server delays responding to the RCPT commands from the sender SMTP. While it is waiting for domain name resolution. If resolution does not complete before the specified period, the SMTP server assumes name resolution is successful and sends a reply code of 250 ok. to the sender SMTP and queues the recipient address for asynchronous resolution. If the name resolution is later determined to be unresolved, the mail is returned to the sender. SMTP uses the default value for the RCPTRESPONSEDELAY statement, which is 60 seconds. For more information on this statement, see the z/OS Communications Server: IP Configuration Reference.

System action
SMTP continues.

Operator response
Change the parameter of the statement to a correct, positive value in hlq.SMTP.CONFIG.

System programmer response
No action is needed.

Module
SMTP
Automation
This message was deleted in z/OS V2R3.

Procedure name
Error

EZA5300E  Invalid value number specified for TempErrorRetries.

Explanation
The value for the TEMPPERRORRETRIES in hlq.SMTP.CONFIG must be a positive number. SMTP uses the default settings for the TEMPPERRORRETRIES statement. For more information on the TEMPPERRORRTTRIES statement, see the z/OS Communications Server: IP Configuration Reference.

System action
SMTP continues.

Operator response
Enter a correct, positive number in the TEMPPERRORRTTRIES statement in hlq.SMTP.CONFIG.

System programmer response
Assist the user as necessary.

Module
SMTP

Automation
This message was deleted in z/OS V2R3.

Procedure name
Error

EZA5301E  Invalid value days specified for WarningAge.

Explanation
An incorrect value was specified for the WARNINGAGE statement. SMTP uses the default setting. For more information on the WARNINGAGE statement and hlq.SMTP.CONFIG see the z/OS Communications Server: IP Configuration Reference.

System action
SMTP continues.

Operator response
Change the WARNINGAGE statement in hlq.SMTP.CONFIG to a valid number.

System programmer response
No action is needed.
Module
SMTP

Automation
This message was deleted in z/OS V2R3.

Procedure name
Error

**EZA5302E** OLD Option of Mailer statement no longer supported.

Explanation
This message only occurs when TCPIP parses the `hlq.SMTP.CONFIG` data set. The OLD parameter to the MAILER statement is no longer valid. If you are updating from an earlier release of TCP/IP, be aware that in Version 3 it is an error to specify OLD in the MAILER statement.

System action
The SMTP server halts until the error is corrected.

Operator response
No action is needed.

System programmer response
Remove the OLD parameter from the MAILER statement in your `hlq.SMTP.CONFIG` data set and reinitialize SMTP.

Module
SMTP

Automation
This message was deleted in z/OS V2R3.

Procedure name
Error

**EZA5303E** Invalid Address in SMSG Authorization List: `address`

Explanation
A syntax error has been found in the address of the local user ID you entered as a parameter to the SMSGAUTHLIST statement in your `hlq.SMTP.CONFIG` data set.

System action
The SMTP server halts until the error is corrected.

Operator response
No action is needed.

System programmer response
Correct the address that you entered in the SMSGAUTHLIST statement and reinitialize SMTP.
Module
SMTP

Automation
This message was deleted in z/OS V2R3.

Procedure name
Error

EZA5311ELOOPINGMAIL statement no longer valid. Please use the BADSPOOLFILEID statement

Explanation
Earlier versions of TCP/IP used the LOOPINGMAIL statement to specify a user ID on the local system where SMTP transfers unreadable spool files and looping mail. This statement has been replaced by the BADSPOOLFILEID statement in Version 3.

System action
The SMTP server is halted until the statement is corrected.

Operator response
No action is needed.

System programmer response
Replace the LOOPINGMAIL statement with an equivalent BADSPOOLFILEID statement in your hlq.SMTP.CONFIG data set and reinitialize SMTP.

Module
SMTP

Automation
This message was deleted in z/OS V2R3.

Procedure name
Error

EZA5312EOnly one POSTMASTER statement may be specified in SECURE mode

Explanation
If you have entered a SECURE statement in your hlq.SMTP.CONFIG data set, you can only use one POSTMASTER statement, and you can only specify a local user ID as the recipient of mail addressed to POSTMASTER.

System action
The SMTP server is halted until the error is corrected.

Operator response
No action is needed.
System programmer response
Make sure that you list only one POSTMASTER statement in your hlq.SMTP.CONFIG data set. Also make sure that you specify a local user ID instead of a user address. Reinitialize SMTP.

Module
SMTP

Automation
This message was deleted in z/OS V2R3.

Procedure name
Error

EZA5313E   Invalid POSTMASTER address: address

Explanation
The NJE or SMTP address in the POSTMASTER statement of your hlq.SMTP.CONFIG data set is incorrect.

System action
The SMTP server is halted until the error is corrected.

Operator response
No action is needed.

System programmer response
Make sure that you have entered a correct, valid local user ID or a correct, valid NJE or SMTP address as part of your POSTMASTER statement. Reinitialize SMTP.

Module
SMTP

Automation
This message was deleted in z/OS V2R3.

Procedure name
Error

EZA5314E   In SECURE mode, POSTMASTER address must be a valid local userid

Explanation
If you have entered a SECURE statement in your hlq.SMTP.CONFIG data set, then the POSTMASTER statement you use must take the form of a valid local user ID. You cannot enter a user address if you are in the SECURE mode.

System action
The SMTP server is halted until the error is corrected.
Operator response
No action is needed.

System programmer response
Make sure to enter only one valid local user ID in your POSTMASTER statement, then reinitialize SMTP. See also message EZA5312I.

Module
SMTP

Automation
This message was deleted in z/OS V2R3.

Procedure name
Error

EZA5315E  Expecting 'PRINT' or 'NOPRINT' after 'REWRITE822HEADER YES' statement

Explanation
If you entered a REWRITE822HEADER YES statement in your hlq.SMTP.CONFIG data set, you must also enter the PRINT parameter or the NOPRINT parameter for the RFC 822 headers. See Appendix B, “Related protocol specifications,” on page 1247 for information about accessing RFCs.

System action
The SMTP server is halted until the error is corrected.

Operator response
After the REWRITE822HEADER YES statement, enter PRINT or NOPRINT, depending on whether you want the RFC 822 headers to display on your console. For more information, see z/OS Communications Server: IP Configuration Reference.

System programmer response
No action is needed.

SMTP

Automation
This message was deleted in z/OS V2R3.

Procedure name
OpenOutputStreams

EZA5319I  Outbound Open Session Limit : None
**Explanation**
The OUTBOUNDOPENLIMIT statement limits the number of simultaneous TCP connections in use for mail delivery. The default value is 0. For more information, see z/OS Communications Server: IP Configuration Reference.

**System action**
SMTP continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
SMTP

**Automation**
This message was deleted in z/OS V2R3.

**Procedure name**
OpenOutputStreams

---

**EZA5320I Outbound Open Session Limit : outbound open limit**

**Explanation**
If you have specified the number of connections as a parameter to the OUTBOUNDOPENLIMIT statement in your hlq.SMTP.CONFIG data set, this message displays the limit set. The OUTBOUNDOPENLIMIT statement should only be used if limited TCP resources exist on the system and SMTP is using an undue portion of those resources.

**System action**
SMTP continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
SMTP

**Automation**
This message was deleted in z/OS V2R3.

**Procedure name**
OpenOutputStreams
EZA5321I  MSG Authorization List : None

Explanation
You have not authorized any local users to issue privileged SMTP SMSG commands. Only users specified in the SMSGAUTHLIST statement of the hlq.SMTP.CONFIG data set can issue the privileged commands. For more information about these commands, see z/OS Communications Server: IP User’s Guide and Commands. See also message EZA5322I.

System action
SMTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
SMTP

Automation
This message was deleted in z/OS V2R3.

Procedure name
OpenOutputStreams

EZA5322I  MSG Authorization List : Processed

Explanation
TCPIP has processed the user IDs you entered as parameters to the SMSGAUTHLIST statement in your hlq.SMTP.CONFIG data set. Those user IDs are now authorized to issue the privileged SMTP SMSG commands. For more information about the privileged commands, see z/OS Communications Server: IP User’s Guide and Commands.

System action
SMTP continues.

No action is needed.

System programmer response
No action is needed.

Module
SMTP

Automation
This message was deleted in z/OS V2R3.
**Procedure name**
OpenOutputStreams

**EZA5324I  procedure_name Terminating: (return_code)**

**Explanation**
SMTP has received a TCP/IP shutdown return code from the TCP/IP stack; therefore, SMTP will also terminate.  
*procedure_name* is the SMTP procedure name.  
*(return_code)* is the TCP/IP return code. This return code will always be (8558) which indicates that TCP/IP shutdown.

**System action**
SMTP ends.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
SMTPUTIL

**Automation**
This message was deleted in z/OS V2R3.

**Procedure name**
CheckResult

**EZA5325E  Unable to delete existing file fulldatasetname, rc=returncode. SMTP terminating.**

**Explanation**
SMTP failed to delete the data set specified in the error message. Determine if SMTP has authority to delete data sets beginning with the defined MAILFILEDSPREFIX.  
*fulldatasetname* is the fully qualified name of the data set SMTP attempted to delete.  
*returncode* is the return code passed back to SMTP by the utilities doing the I/O to delete the data set.

**System action**
SMTP ends.

**Operator response**
No action is needed.

**System programmer response**
Ensure that SMTP has the proper Security Authorization Facility (SAF) authority to delete data sets beginning with the prefix defined by MAILFILEDSPREFIX. Check for any system error messages that appear concurrently with this error message.
If return code is 208, check to see if there is data set contention for the data set name displayed in the error message. SMTP must have access to all its data sets to perform its function. Therefore, if a defragmentation utility (or any other application) is actively accessing SMTP data sets while the SMTP server is active, a data set contention problem could occur. To avoid this problem, configure the application to bypass data sets with the SMTP high-level qualifier. The high-level qualifier is set by the SMTP configuration parameter MAILFILEDSPREFIX.

Module
SMTP

Automation
This message was deleted in z/OS V2R3.

Procedure name
InitializeDeliveryQueue

EZA5326E Unable to allocate new file fulldatasetname, RC= nn, DSPrefix may be invalid. SMTP terminating.

Explanation
SMTP attempts to allocate the data set specified in the error message. Determine whether SMTP has authority to allocate and delete data sets beginning with the defined MAILFILEDSPREFIX value. SMTP receives a return code from the SVC99 call.

fulldatasetname is the data set name that SMTP is using.
nn is an SVC99 return code passed to SMTP.

System action
SMTP ends.

Operator response
No action is needed.

System programmer response
1. Check the Output file generated under the SMTP started task for any additional message pertaining to this data set.
2. Check the system console for any system error messages that appear concurrently with this error message.
3. Ensure that SMTP has the proper SAF authority to allocate and delete data sets beginning with the prefix defined by MAILFILEDSPREFIX.

Module
SMTP InitializeDeliveryQueue

Automation
This message was deleted in z/OS V2R3.

EZA5327E Terminating: Cannot allocate data set name, rc= return code
Explanation
SMTP was unable to allocate a mail data set beginning with the prefix value specified in the MAILFILEDSPREFIX statement of your hlq.SMTP.CONFIG data set. An MVS operating system error was detected.

System action
SMTP ends.

Operator response
No action is needed.

System programmer response
Make sure that SMTP has the proper SAF authority to create or delete data sets beginning with the prefix defined in MAILFILEDSPREFIX. Check for any MVS system error messages that appear when this message does.

Module
SMTP

Automation
This message was deleted in z/OS V2R3.

Procedure name
InitializeDeliveryQueue

EZA5328E  date time Terminating: Stop received

Explanation
SMTP received an external “Stop” interrupt from the operating system.

System action
All files are closed and SMTP ends.

Operator response
Contact the system programmer.

System programmer response
Check for any system error messages that appear concurrently with this error message.

Module
SMTP

Automation
This message was deleted in z/OS V2R3.

Procedure name
MarkForExpirationCheck

EZA5329E  procedure name Terminating: errmsg (msgnum)
Explanation
A condition has occurred that caused SMTP to end.

errmsg is the text of the message that describes the error.

msgnum is the 4-digit numeric portion of the message identifier of the EZA message whose text is displayed in errmsg. For more information about this message, see message EZAmsgnum.

System action
SMTP ends.

Operator response
Notify the system administrator.

System programmer response
Respond as indicated by the message EZAmsgnum.

Module
SMTPUTIL

Automation
This message was deleted in z/OS V2R3.

Procedure name
CheckResult

EZA5330I procedure name SMTP TCP Returns: errmsg (msgnum)

Explanation
This message indicates an error in the SMTP/TCP interface, as specified. It generally implies that the connection has been closed by the remote site. This message is generated only if the DEBUG statement is active in the SMTP startup procedure.

errmsg is the text of the message that describes the error.

msgnum is the 4-digit numeric portion of the message identifier of the EZA message whose text is displayed in errmsg. For more information about this message, see message EZAmsgnum.

System action
SMTP continues.

Operator response
Notify the system administrator.

System programmer response
Respond as indicated by the message EZAmsgnum.

Module
SMTPUTIL
Procedure name
CheckResult

**EZA5331E  Local Error in MakeAddrBlok RC = rc**

**Explanation**
SMTP did not have enough free disk space to store an ADDRBLOK data set.

**System action**
SMTP continues.

**Operator response**
No action is needed.

**System programmer response**
If the disk is full, delete old data sets, such as SMTP logs, or increase the size of the disk. If the disk is not full, there might be a problem with the ADDRBLOK data set. If the error persists, contact the IBM Software Support Center.

**Module**
SMTPEVNT

Automation
This message was deleted in z/OS V2R3.

Procedure name
StoreData

**EZA5332E  Error occurred copying spool file, return code=return code**

**Explanation**
An error occurred before the spool file finished copying. The spool file is closed.

**System action**
Processing is terminated.

**Operator response**
Use the return code value indicated to determine why the error is occurring and correct the problem or delete the file. Restart SMTP. For more information on return codes, see z/OS Communications Server: IP Sockets Application Programming Interface Guide and Reference.

**System programmer response**
No action is needed.
Module
SMTPBTCH

Automation
This message was deleted in z/OS V2R3.

Procedure name
InformUser

EZA5333E  data_set ADDRBLOK is in an inconsistent state...repairing

Explanation
SMTP sends this message to the server console to show a problem with the ADDRBLOK data set. SMTP attempts to rewrite the ADDRBLOK data set in a correct format.

System action
SMTP continues.

Operator response
No action is needed.

System programmer response
Normally, no response is necessary. If SMTP abends while performing this rewrite, the ADDRBLOK might not be recoverable. Rename or discard the ADDRBLOK data set to prevent further abends of SMTP.

Module
SMTPQUEU

Automation
This message was deleted in z/OS V2R3.

Procedure name
EnQueueForDelivery

EZA5334E  Delivery of Note note to address failed RC = rc

Explanation
SMTP sends this message to the server console to show that the indicated note was not successfully transferred to the indicated address for the indicated return code reason. This condition occurs if SMTP tries to punch a file to an incorrect user ID, or if SMTP tries to punch a file with a header with more than 80 characters to a mailer running Mailer Old.

System action
SMTP continues.

Operator response
Contact the system programmer.
System programmer response
Message EZA5336E precedes this error message, so follow the information in EZA5336E. Return code = 53 indicates an incorrect user ID or user node. Determine why this was unsuccessful, correct the problem, and try again.

Module
SMTPQUEU

Automation
This message was deleted in z/OS V2R3.

Procedure name
DeliverSpoolFile

EZA5335E Unable to allocate the file data set name rc=return code

Explanation
SMTP cannot allocate a data set necessary for it to continue functioning. Look for message EZA5560I in the SMTP output file for more information on why dynamic allocation failed.
data_set_name is the fully qualified data set name.
return_code is used internally, use message EZA5560I for more information.

System action
SMTP halts.

Operator response
Notify the system programmer of the error.

System programmer response
Use the text of message EZA5560I and the documentation describing Dynamic Allocation (DYNALLOC) in z/OS MVS Programming: Authorized Assembler Services Reference ALE-DYN to determine the cause of the error and respond as indicated. Most of these problems are DASD management related so you need to correct the problem, then restart SMTP.

Module
SMMVSUB

Automation
This message was deleted in z/OS V2R3.

Procedure name
svc202

EZA5336E Error allocating spool, user=user node.user ID, class=output class, rc=return code

Explanation
This message indicates an error in delivering a mail file, either to a local user or to a user on the associated Job Entry Subsystem (JES). It specifies the user node and ID, the spool data set format, and the return code. The spool file is not delivered.
System action
SMTP continues.

Operator response
Contact the system programmer.

System programmer response
This problem usually occurs because the user ID is not a valid JES ID or the user node is not a valid NJE node for your system. Check that the user node was defined correctly to the VMCF subsystem when it was started. See Step 3: Configure VMCF and TNF in z/OS Communications Server: IP Configuration Guide for more information about starting VMCF and TNF. For more information about JES IDs, see the z/OS JES3 Initialization and Tuning Guide.

If the ID and node are valid, use the return code value to determine why the error is occurring and correct the problem. Restart SMTP. For more information about spool return codes, see the z/OS JES3 Messages or z/OS JES2 Messages, depending on which version of JES you are using.

Note: Instead of using defining the JES node during VMCF initialization, you can use the keyword NJENODENAME within your SMTP configuration to specify a valid NJE node. For more information, see NJENODENAME in z/OS Communications Server: IP Configuration Reference.

Procedure name
svc202

**EZA5339E**  SMTP active, resource full data set name now available rc=return code

**Explanation**
SMTP sends this message to the server console to show that SMTP now has the use of the data set for which it was waiting.

**System action**
SMTP resumes normal operation.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
SMMVSUB

**Automation**
This message was deleted in z/OS V2R3.
EZA5340E  SMTP NOTE from userid at nodeid was truncated by hostname

Explanation
This message is generated in the data set associated with the OUTPUT DD card in the SMTP started procedure. The SMTP note is truncated because the note being read from the JES spool is too large and the CHECKSPOOLSIZE statement is enabled. The message is also appended to the truncated SMTP note. The truncated note is sent to its recipients. The MAXMAILBYTES statement in the hlq.SMTP.CONFIG file can be adjusted to change the primary space allocated for the hlq.TEMP.NOTE data set. For more information about the configuration statements see z/OS Communications Server: IP Configuration Reference.

In the message text:

userid
The user identifier that sent the SMTP note to the JES spool using TSO XMIT.

nodeid
The node identifier where the SMTP note originated.

hostname
The host where the SMTP mailer (which truncated the SMTP note) is active.

Tip: If the MAXMAILBYTES statement is not coded in the hlq.SMTP.CONFIG file, it has a default of 524288 bytes.

System action
SMTP continues to run and large notes are truncated.

Operator response
Notify the system programmer about any truncated notes.

System programmer response
Review your system DASD resource requirements and adjust the MAXMAILBYTES statement, if appropriate.

User response
Not applicable.

Problem determination
Not applicable.

Automation

This message was deleted in z/OS V2R3.

Example

Your hlq.SMTP.CONFIG file contains the following statements:

<table>
<thead>
<tr>
<th>MAXMAILBYTES nnnn</th>
</tr>
</thead>
<tbody>
<tr>
<td>CHECKSP00LSIZE</td>
</tr>
</tbody>
</table>

The following messages are generated in the data set associated with the OUTPUT DD card in the SMTP started procedure after a large note is sent:

- EZA5144I Max Length of Accepted Mail : nnnn bytes
- EZA5341I CheckSpoolSize : Enabled
- EZA5340E SMTP note from USER at MYHOST was truncated by MYHOST.com

Fragment from truncated note:

```
Received: from MYHOST.com xxx.xxx.xxx.xxx by HOST.COM (IBM VM SMTP Level 440) via TCP with SMTP ;
Wed, 02 Nov
Received: from MYHOST by MYHOST.com (IBM MVS SMTP CS V1R8) with BSMTP id TSU00026; Wed, 02 Nov 05
11:16:13 EST
Date:     2 Nov 05 11:15:27 EST
From:     USER@MYHOST.com
To:       USER1@HOST.com

<Body of the mail >
EZA5340E SMTP note from USER at MYHOST was truncated by MYHOST.com
```

EZA5341I CheckSpoolSize : Enabled

Explanation

The CheckSpoolSize statement in the hlq.SMTP.CONFIG file is enabled. If this statement is enabled, SMTP checks the size of the JES spool file and if it is larger than the primary space allocation for the data set hlq.TEMP.NOTE, then that SMTP note is truncated. The default for this statement is disabled. For more information about the CHECKSP00LSIZE statement see z/OS Communications Server: IP Configuration Reference.

System programmer response

No action is needed.

Module

SMTP

Automation

This message was deleted in z/OS V2R3.

Procedure name

OpenOutputStreams
EZA5342E  SMTP NOTE from spool file job ID jobid was truncated by hostname

Explanation
This message is generated in the data set associated with the OUTPUT DD card in the SMTP started procedure. The SMTP note is truncated because the note being read from JES spool is too large and the CHECKPOOLSIZE statement is enabled. The message is also appended to the truncated SMTP note. The truncated note is sent to its recipients. The MAXMAILBYTES statement in the hlq.SMTP.CONFIG file can be adjusted to change the primary space allocated for the hlq.TEMP.NOTE data set. For more information about the configuration statements see z/OS Communications Server: IP Configuration Reference.

In the message text:

jobid
   The spool file job identifier of the SMTP note used by SMTP batch.

hostname
   The host where the SMTP mailer that truncated the SMTP note is active.

Tip: If the MAXMAILBYTES statement is not coded in the hlq.SMTP.CONFIG file, it has a default of 524288 bytes.

System action
SMTP continues to run and large notes are truncated.

Operator response
Notify the system programmer about any truncated notes.

System programmer response
Review your system DASD resource requirements and adjust the MAXMAILBYTES statement if appropriate.

User response
Not applicable.

Problem determination
Not applicable.

Example

Your hlq.SMTP.CONFIG file contains the following statements:

<table>
<thead>
<tr>
<th>Statement</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>MAXMAILBYTES</td>
<td>nnnn</td>
</tr>
<tr>
<td>CHECKSPoolsIZE</td>
<td></td>
</tr>
</tbody>
</table>

The following messages are generated in the data set associated with the OUTPUT DD card in the SMTP started procedure after a large note is sent:

<table>
<thead>
<tr>
<th>Message ID</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>EZA5144I</td>
<td>Max Length of Accepted Mail : nnnn bytes</td>
</tr>
<tr>
<td>EZA5341I</td>
<td>CheckSpoolSize : Enabled</td>
</tr>
<tr>
<td>EZA5342E</td>
<td>SMTP note from spool file job ID JOB00035 was truncated by MYHOST.com</td>
</tr>
</tbody>
</table>

Fragment from truncated note:

```
Received: from MYHOST.com xxx.xxx.xxx.xxx by HOST.COM (IBM VM SMTP Level 440) via TCP with SMTP ; Wed, 02 Nov
Received: from HOST by MYHOST.com (IBM MVS SMTP CS V1R8) with BSMTP id JOB00035; Wed, 02 Nov 05
14:42:06 EST
DATE: 19 DEC 03 08:00:00 GMT
FROM: User
TO: User2
SUBJECT: TEST

<Body of the mail >
EZA5342E SMTP note from spool file job ID JOB00035 was truncated by MYHOST.com
```

EZA5343I Translated ATSIGN symbol : symbol

Explanation

The ATSIGN statement in the hlq.SMTP.CONFIG file has been set. Setting this statement means that SMTP will use this character instead of the at sign (@) between the user ID and host ID fields in addressing strings, for example, userid@hostid. This statement should only be used for specific languages because of translation encodings.

Setting this option might cause problems if notes are being sent between different language sites.

symbol is the input symbol replacing the at sign (@).

For more information about the ATSIGN configuration statement, see the z/OS Communications Server: IP Configuration Reference.

System action

EZA5351E  Invalid NJENode Specified: node name

Explanation
An incorrect NJENODENAME statement has been specified in the hlq.SMTP.CONFIG data set.

System action
The SMTP server is halted until the error is corrected.

Operator response
Refer this message to the system programmer.

System programmer response
Correct the NJENODENAME statement in the hlq.SMTP.CONFIG data set and restart SMTP. For more information, see the z/OS Communications Server: IP Configuration Reference.

Module
SMTP

Automation
This message was deleted in z/OS V2R3.

Procedure name
Error

EZA5352I  date time Connection closed at IP addr: ipaddress reason: errmsg (msgnum)

Explanation
The connection was closed either by the local SMTP client or the remote SMTP server. This might occur due to normal networking problems or because the remote SMTP is not active. Depending on the error, SMTP might try to resend the mail at a later time. This message appears in the output file that is associated with the OUTPUT DD statement for the SMTPPROC.

date is the date (month/day/year) that the connection was closed.
time is the time (hours:minutes:seconds) that the connection was closed.
ipaddress is the TCP/IP address of the remote SMTP server.

ermmsg is the text of the message that describes the error.

msgnum is the 4-digit numeric portion of the message identifier of the EZA message whose text is displayed in(errmsg). See that message for more information.

**System action**
SMTP continues.

**Operator response**
No action is needed.

**System programmer response**
Respond as indicated by the message EZAmsgnum.

This message was deleted in z/OS V2R3.

**Procedure name**

OpenOutputStreams

---

**EZA5391E**  SMTP TERMINATING DUE TO RENAME FAILURE AND STOPONRENF IS CODED IN CONFIGURATION FILE

**Explanation**

The SMTP server ended because of a failure to rename a data set associated with the batch connection (257) and the option STOPONRENF is coded in the SMTP configuration file.

Message EZA5544E is generated when a RENAME failure identifies the data set that SMTP was unable to rename. If this data set name is smtphlq.CONN257.NOTE, then a note being processed by the batch connection (257) might have been lost.

See the information about the STOPONRENF configuration statement in z/OS Communications Server: IP Configuration Reference.

**System action**

SMTP stops.

**Operator response**

Contact the system programmer.

**System programmer response**

Determine why the RENAME failure is occurring. Check the system console log for messages prior to the EZA5544E message that are associated with the failing data set name. Change the SMTP configuration file if you want SMTP to continue when these types of failures occur.

**Procedure name**  
CheckSecurityTable

---

**EZA5440S**  
Fatal Error: Unable to open SECTABLE DD but SECURE option was specified.

**Explanation**  
The SECURE statement is used as a configuration statement in the `hlq.SMTP.CONFIG` data set, but no corresponding SECTABLE data set definition name is found in the SEZAINST(SMTPPROC) data set.
System action
SMTP ends abnormally.

Operator response
No action is needed.

System programmer response
Make sure that the SECTABLE DD statement name is included in the updated SMTP cataloged procedure SEZAINST(SMTPPROC). This points to the DD data set and allows SMTP to operate as a secure mail gateway between TCP network sites and NJE network sites. For more information, see z/OS Communications Server: IP Configuration Reference. Reinitialize SMTP.

SMTPSEC

Automation
This message was deleted in z/OS V2R3.

Procedure name
SecurityTableErrors

EZA5446N KANJI JIS 1978 shift-in ASCII

Explanation
The SMTP server and client programs access data sets containing data that is usually in extended binary coded decimal interchange code (EBCDIC) format. To transfer these data sets to or from an American National Standard Code for Information Interchange (ASCII) based host requires the use of a translation table. This message indicates that the SMTP client is configured to use the Japan Institute of Standards (JIS) 1978 version if kanji conversion is enabled. ASCII is output when the server converts from JIS kanji code. For more information on configuring the translation tables, see z/OS Communications Server: IP Configuration Reference.

System action
SMTP continues.

Procedure name
DoRestricted

EZA5463E date time Unregistered BSMTPTCP Spool File from userid@nodeid
Explanation
An unregistered batch spool data set was received from the sender at the indicated node ID. This condition occurred because the sender is not registered in the DD data set security table. The BSMTP data set is not delivered.

System action
SMTP continues.

Operator response
No action is needed.

System programmer response
The sender should obtain authorization to use the secure gateway. To do so, the sender should follow the instructions contained in the SECURITY.MEMO data set, which is returned from the SMTP server just before this batch log entry.

Module
SMTPCMDS

Automation
This message was deleted in z/OS V2R3.

Procedure name
DoMail

**EZA5464E date time Unregistered BSMTP MAIL FROM: print path**

Explanation
SMTP sends this message to the batch job log to show that unregistered BSMTP mail was received from the address specified. The condition occurred because the sender is not registered in the DD data set security table. The BSMTP mail is not delivered.

System action
SMTP continues.

Operator response
No action is needed.

System programmer response
The sender should obtain authorization to use the secure gateway. To do so, the sender should follow the instructions contained in the SECURITY.MEMO data set, which is returned from the SMTP server just before this batch log entry.

Module
SMTPCMDS

Automation
This message was deleted in z/OS V2R3.
**Procedure name**
DoMail

**EZA5465E**  
*date time* Deleting Spool File from undetermined origin job number (*spoolid*)

**Explanation**
This message is sent to the SMTP batch log to show when a spool data set of an unknown origin is deleted. SMTP cannot accept an NJE spool data set if its origin cannot be determined. This message is generated because either the originator's user ID or the originator's node ID was missing. There are two ways to spool a data set to SMTP:

- The TSO XMIT command
- The batch SMTP commands with the IEBGENER utility in TSO/ISPF

`date` is the date (month/day/year) the message was sent.  
`time` is the time (hours:minutes:seconds) the message was sent.  
`spoolid` is the JES spool identifier (SSSOJOB1).

**System action**
SMTP continues.

**Operator response**
Contact the system programmer.

**System programmer response**
Determine why SMTP is receiving spooled data sets without the originator's user ID or the originator's node ID, and correct the error. This type of string (MAIL FROM: <>)) is commonly generated by a remote SMTP sending an error notification for undeliverable mail.

If you are using the TSO XMIT command, it must be set up correctly to pass a valid NJE user ID and a valid NJE node ID. For more information about the TSO XMIT command, see the z/OS TSO/E Command Reference.

If you are using the Batch SMTP interface, check your application that generates the SMTP commands for HELO and MAIL FROM. The MAIL FROM command must have the originator's user ID and the originator's host ID (equivalent to the originator's node ID.) See the z/OS Communications Server: IP User's Guide and Commands for more information about SMTP commands and batch SMTP.

**Module**
SMTPBTCH

*date time* Rejecting job number (*spool ID*) From *userid* at *nodeid*

**Automation**
This message was deleted in z/OS V2R3.

**EZA5468E**  
*date time* Gateway is not enabled and the file is not from the local node (*node name*)

**Explanation**
The job number was rejected for the indicated user ID and node ID either because the sender’s address is in the RESTRICT list or because the TCP-to-NJE mail gateway is not enabled.

**System action**
SMTP continues.

**Operator response**
Perform the following:

1. Ensure that the JES node name was defined correctly to the VMCF subsystem when it was started.
2. Ensure the IKJTS000 parmlib has the correct MVS node name specified on the TRANSREC/TRANSMIT statement.

See Step 3: Configure VMCF and TNF in z/OS Communications Server: IP Configuration Guide for more information about starting VMCF and TNF.

**System programmer response**
Run the SMTPNJE program to configure the SMTP server to run as a mail gateway between TCP network users and users located on an NJE network attached to the local host. For more information about the RESTRICT list and the SMTPNJE program, see z/OS Communications Server: IP Configuration Reference.

**Module**
SMTPBTCH
Automation

This message was deleted in z/OS V2R3.

Procedure name
InformUser

EZA5469E  mm/dd/yy hh:mm:ss UNABLE TO ACCESS SPOOL FILE spoolid SMTP STOPPED

Explanation
SMTP detected a JES spool file that it cannot access. Trying to do I/O functions to this file would have resulted in ABENDS001 in SMTP. SMTP was stopped to allow the system administrator to look at the spool file and correct the application that is generating the spool file. This error might have been caused by an improperly closed file.

mm/dd/yy is the date (month/day/year) of the message.

hh:mm:ss is the time (hours:minutes:seconds) of the message.

spoolid is the JES spool identifier (SSSOJOBI).

System action
SMTP halts.

Operator response
Contact the System Programmer.

System programmer response
Check the application that generated the spool file for SMTP. Delete the current spool file or change the destination to be something other than the SMTP started procedure. If more of these spool files are expected, then SMTP can be configured to automatically delete them. See the z/OS Communications Server: IP Configuration Reference for more information about the configuration statement DELETEBADSPPOOLFILE.

Module
SMTPBTCH

Automation

This message was deleted in z/OS V2R3.

Procedure name
ServiceReaderMVS

EZA5470E  mm/dd/yy hh:mm:ss UNABLE TO ACCESS SPOOL FILE spoolid FILE DELETED

Explanation
SMTP detected a JES spool file that it cannot access. Trying to do I/O functions to this file would have resulted in ABENDS001 in SMTP. SMTP was given permission to delete this spool file because the statement DELETEBADSPPOOLFILE has been configured. This error might have been caused by an improperly closed file.

mm/dd/yy is the date (month/day/year) of the message.

hh:mm:ss is the time (hours:minutes:seconds) of the message.

spoolid is the JES spool identifier (SSSOJOBI).
**System action**
SMTP continues.

No action is needed.

**Module**
SMTPBTCH

**Automation**
This message was deleted in z/OS V2R3.

**Procedure name**
SERVICEREADERMVS

**EZA54711  DeleteBadSpoolFile : state**

**Explanation**
This message indicates whether the DELETEBADSPPOOLFILE statement has been coded.  

*state* displays the value of Yes or No.

If *state* is No, then the DELETEBADSPPOOLFILE statement in the *hlq*.SMTP.CONFIG file has not been coded. This means that SMTP stops when it tries to access a spool file that would cause an ABENDS001. Message EZA5469E is generated before SMTP stops. Manually delete the spool file or reroute it to another destination before restarting SMTP.

If *state* is Yes, then the DELETEBADSPPOOLFILE statement in the hlq.SMTP.CONFIG file has been coded. This statement permits SMTP to delete a spool file that would cause an ABENDS001 if SMTP were to access it. Message EZA5470E is generated if any deletions occur when SMTP is active.

See the z/OS Communications Server: IP Configuration Reference for more information about the DELETEBADSPPOOLFILE configuration statement.

**System action**
SMTP continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
SMTP

This message was deleted in z/OS V2R3.
Procedure name
OpenOutputStreams

EZA5472I  date time Generating Note data set name as BSMT REPLY

Explanation
If the delivery type specified for the note command is “BATCH” and the LOG statement in the hlq.SMTP.CONFIG data set is enabled, SMTP sends a data set containing the note and any error message(s) to the sender when the connection specified cannot be established. This error message is also sent to the SMTP LOGFILE.

System action
SMTP continues.

Operator response
No action is needed.

System programmer response
Perform a Resolver Trace for the SMTP server to determine why the connection could not be established. Take corrective actions as necessary, and resend the note. For more information about SMTP traces, see z/OS Communications Server: IP Diagnosis Guide. If more help is required contact the IBM Software Support Center.

Module
SMTPQUEU

Automation
This message was deleted in z/OS V2R3.

Procedure name
MakeAddrBlok

EZA5473I  date time Generating Note note_name as Error Notification for Undeliverable Mail

Explanation
If the delivery type specified in the note command is not “BATCH” and the LOG statement in the hlq.SMTP.CONFIG data set is enabled, SMTP sends a note containing an error message to the sender. One of the common causes for this message is that the recipient’s address associated with the original note is UNKNOWN. This error message appears in the SMTP log file associated with the LOGFILE DD statement for the SMTPPROC.

date is the date (month/day/year) the message was sent.

time is the time (hours:minutes:seconds) the message was sent.

note_name is the Error Notification identifier.

System action
SMTP continues.

Operator response
No action is needed.
System programmer response
If the problem is the recipient's address, then check the spelling of the recipient's user ID and domain. If it is spelled correctly, perform a Resolver Trace for the SMTP server to determine why the connection could not be established. Take corrective actions as necessary, and resend the note. For more information about SMTP traces, see z/OS Communications Server: IP Diagnosis Guide.

**EZA5489I  date time QueryNumber Popping request from Wait to Send**

**Explanation**
This debug message is displayed when SMTP is attempting to resolve a domain name. SMTP has waited the amount of time defined by the RESOLVERRETRYINT and will try the request again to the name server.

**System action**
SMTP sends the request and continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
SMTP

**Automation**
This message was deleted in z/OS V2R3.

---

**EZA5490I  date time QueryNumber Ressetting Retry Timer: seconds left seconds**

**Explanation**
This debug message is displayed when SMTP is attempting to resolve a domain name. SMTP resets the retry timer.

**System action**
SMTP continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
SMTP

**Automation**

Procedure name
MainLoop

EZA5491I  date time UDP packet arrived from: foreign_host data_length / full_length bytes.

Explanation
This debug message is displayed when SMTP has received a UDP packet. The name of the host that sent the packet, data length and the full length of the packet are displayed.

System action
The Packet is received and SMTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
SMTP

Automation
This message was deleted in z/OS V2R3.

Procedure name
MainLoop

EZA5492I  date_time#errconnection Looping mail transfer to badspoolfile

Explanation
SMTP has detected looping mail. The mail file is sent to the file BADSPOOLFILE.

System action
SMTP sends the mail file to the BADSPOOLFILE and continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
SMTPBTCH

Automation

DoCommand

**EZA5497I**  
*date time Enqueuing file data set name recipient recipient number on ip address*

**Explanation**
This debug message is displayed when a mail file is enqueued. The recipient number on the queue and the IP address are displayed. For more information on queued mail, see the z/OS Communications Server: IP User's Guide and Commands.

**System action**
SMTP continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
SMTPEVNT
Automation
This message was deleted in z/OS V2R3.

Procedure name
CloseCompletedEvent

**EZA5498I  date time#connection 552 Too many hops - threshold exceeded**

**Explanation**
The SMTP file has hopped more than 25 times. The SMTP mail file will not be delivered.

**System action**
SMTP returns the mail file to the sender and continues.

**Operator response**
Verify that the recipient exists and resend.

**System programmer response**
The actual failing piece of mail is saved in a data set with the naming convention of MailFileDSPPrefix.Connxxx.LOOPMAIL, where the value of MailFileDSPPrefix can be found in the SMTP configuration data set and xxx represents the connection number which received the message. Use this data set to determine problems with the recipient address. This data set can then be deleted after the problem has been resolved.

**Module**
SMTPEVNT

Automation
This message was deleted in z/OS V2R3.

Procedure name
StoreData

**EZA5499I  date time#connection 451 Local error: Disk Full. Data from sender was discarded.**

**Explanation**
The SMTP attempted to receive a mail file, but SMTP was unable to store the mail file because there was not enough disk space available. The remote SMTP may resend the data at a later time. This message appears in both the output file associated with the OUTPUT DD statement and the log file associated with the LOGFILE DD statement for the SMTPPROC.

*date* is the date (month/day/year) the message was sent.

*time* is the time (hours:minutes:seconds) the message was sent.

*connection* is the TCP/IP connection number.

*sender* is the sender's email address.

**System action**
SMTP returns a reply code to the sender and discards the SMTP file.
Operator response
Contact the system programmer.

System programmer response
If the problem continues, increase the volume size for SMTP.

Module
SMTPEVNT

Automation
This message was deleted in z/OS V2R3.

Procedure name
StoreData

EZA5500I  date time#connection 451 Local error: Allocation Error. Data from sender was discarded.

Explanation
The SMTP attempted to allocate a file and received an allocation error. The remote SMTP may resend the data at a later time. This message appears in both the output file associated with the OUTPUT DD statement and the log file associated with the LOGFILE DD statement for the SMTPPROC.

date is the date (month/day/year) the message was sent.
time is the time (hours:minutes:seconds) the message was sent.
connection is the TCP/IP connection number.
sender is the sender's email address.

System action
SMTP returns a reply code to the sender and discards the SMTP file.

Operator response
Verify that the volume is available.

System programmer response
No action is needed.

EZA5526I    date time#query_number Truncation Bit set in Nameserver Response

Explanation
SMTP received a response from a name server with a truncation bit indicating that the response has been truncated.

System action
The response is discarded and the query is repeated.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
SMTPRES

Automation
This message was deleted in z/OS V2R3.
EZA5527I  

**Explanation**

SMTP has received a response to a name server query that either does not contain a valid name or has a data length error on the response. The response is discarded and the query is repeated.

In the message text:

- **mm/dd/yy**
  - The current date (month/day/year).

- **hh:mm:ss**
  - The current time (hours:minutes:seconds).

- **query_number**
  - The query number of the name server.

- **error_number**
  - The type of error detected. The value 1 indicates an invalid name. The values 2 and 3 indicate an invalid length in the response data of the name server.

**System action**

SMTP continues.

**Operator response**

None.

**System programmer response**

Procedure name
NameServerToRQR

EZA5544E  Unable to RENAME file datasetname1 to datasetname2 rc=rc

Explanation
An attempt by SMTP to rename a data set failed. This may cause SMTP to have problems with processing the mail.

In the message text:

datasetname1
The original name of the SMTP data set used on the RENAME function.

datasetname2
The new name of the SMTP data set used on the RENAME function.

rc
The return code from the program that detected the error.

System action
• If the STOPONRENF configuration statement is not coded in the SMTP configuration file, processing continues.
• If the STOPONRENF configuration statement is coded and the RENAME failure occurs on a data set associated with the batch connection, the SMTP server stops.
See z/OS Communications Server: IP Configuration Reference for more information about the STOPONRENF statement.

**Operator response**

Refer this message to the system programmer.

**System programmer response**

Check the system log for message IEC614I. Use the diagnostic information provided and see z/OS DFSMSdfp Diagnosis. If message IEC614I is not present, check for return code 408. This return code indicates that the new data set name already exists but is not cataloged. Locate and delete the data set.

Data set contention can cause this problem. Check your system console to ensure that another application or defragmentation utility did not access the SMTP data set while the SMTP server was active. To avoid this problem, configure the application or utility such that it bypasses data sets with the SMTP high-level qualifier.

**Problem determination**

Not applicable.

```
13.54.20  IEC614I SCRATCH FAILED - RC 008, DIAGNOSTIC INFORMATION IS (940B0425), SMTP,CPDLB1,TPOUSER.A0000002.NOTE
13.54.20  EZA5544E Unable to RENAME file TPOUSER.CONN257.NOTE to TPOUSER.A0000002.NOTE rc=20
13.54.20  EZA5568E UNABLE TO ALLOCATE ADDRBLOK DATA SET CORRECTLY
```

The following example shows the system console that is associated with this problem. The data set TPOUSER.A0000005.NOTE already exists but is not cataloged.

```
15.25.07  EZA5544E Unable to RENAME file TPOUSER.CONN257.NOTE to TPOUSER.A0000005.NOTE rc=408
15.25.07  EZA5568E UNABLE TO ALLOCATE ADDRBLOK DATA SET CORRECTLY
```

**Procedure name**

svc202r

EZA5545E date time addrbloktname.ADDRBLOK does not exist. No Mail Error process is attempted. RC = rc
**Explanation**
SMTP tried to build an error file, but the original SMTP note, represented by the data set `addrblokname.ADDRBLOK`, has not been allocated.

In the message text:

- **date**
  The date in the form mm/dd/yy.

- **time**
  The time in the form hh:mm:ss.

- **addrblokname**
  The name of the SMTP data set.

- **rc**
  The return code from the program that detected the error.

**System action**
SMTP continues.

**Operator response**
No action is needed.

**System programmer response**
Check your system console to ensure that another application or defragmentation utility did not access or delete the SMTP data set while the SMTP server was active. Data set contention can cause this problem. To avoid this problem, configure the application to bypass data sets with the SMTP high-level qualifier.

**User response**
Not applicable.

**Problem determination**
Not applicable.

**Source**
z/OS Communications Server TCP/IP: SMTP

**Module**
SMTPUTIL

**Routing code**
2, 10

**Descriptor code**
4

**Automation**
This message was deleted in z/OS V2R3.
Example

This message is generated on a test system because the data set TPOUSER.00000006.ADDRBLOK was deleted and one day passed; this causes the mail to be considered undeliverable.

Tip: The ?GETSTATE macro returns RC 28 because the data set does not exist.

Explanation

SMTP tried to build an error file, but the original SMTP note, represented by the data set \textit{addrblokname}.ADDRBLOK, is empty. Therefore, the sender's address cannot be retrieved.

\textit{date} is the date in the form \textit{mm/dd/yy}.

\textit{time} is the time in the form \textit{hh:mm:ss}.

\textit{addrblokname} is the name of the SMTP data set.

\textit{rc} is the return code from the program that detected the error.

System action

SMTP continues.

Operator response

No action is needed.

System programmer response

Check your system console to ensure that another application or defragmentation utility did not access or delete the SMTP data set while the SMTP server was active. Data set contention can cause this problem. To avoid this problem, configure the application to bypass data sets with the SMTP high-level qualifier.

Note: Before you start the SMTP server again, delete \textit{addrblokname}.ADDRBLOK.

This message was deleted in z/OS V2R3.

**Procedure name**
PrintPath

**EZA5548E** Unable to open existing file \textit{FullDataSetName}, \textit{rc= ReturnCode}. SMTP Terminating.

**Explanation**
SMTP attempted to open the data set specified in the error message which already existed and received an error from the operating system.

\textit{FullDataSetName} is the name of the data set.

\textit{ReturnCode} is the value of the return code.

**System action**
SMTP ends.

**Operator response**
None

**System programmer response**
If return code is 28, check to see if there is data set contention for the data set name displayed in the error message. SMTP must have access to all its data sets to perform its function. Therefore, if a defragmentation utility (or any other application) is actively accessing SMTP data sets while the SMTP server is active, a data-set contention problem could occur. To avoid this problem, configure the application to bypass data sets with the SMTP high level qualifier. The high-level qualifier is set by the SMTP configuration parameter MAILFILEDSPREFIX.

System programmer response
No action is needed.

Module
EZABB01X

EZA5550I  date time EXIT REJECTS - CONNECTION connection_number ACTIONCODE action

Explanation
The user exit has chosen to reject an inbound mail item. This message is written to the logfile, if the logfile option is active.

date and time indicate when the connection was rejected.
connection_number is the unique identifier of this connection.
action is the action code that was used when the exit was called. The action codes are defined in the EZBZSMTP macro.

System action
The partner SMTP application is notified that service is denied due to a user supplied exit and processing continues.

Operator response
No action is needed.
System programmer response
No action is needed.

Procedure name
DoExit

EZA5551I  mm/dd/yy hh:mm:ss connection_number EXITPARMS VER version ACTN actioncode USER TOKEN value IPADDR ipaddr DLEN length SAFTOKEN ADDR safaddr

Explanation
This parmlist was passed to the user supplied SMTP exit for the connection number specified. This message will be written to the debug file, if the debug option is active. The less than symbol (<) indicates data flowing to the user supplied exit.

In the message text:

- **mm/dd/yy**
  - The current date in the month/day/year format.

- **hh:mm:ss**
  - The current time in the hours:minutes:seconds format.

- **connection_number**
  - The unique identifier of this connection.

- **version**
  - The version number of the parmlist.

- **actioncode**
  - The action code for which the user supplied exit was called. The action codes are defined in the EZBZSMTP macro.

- **value**
  - A 4-byte value supplied by the user.

- **ipaddr**
  - The source IP address of the remote SMTP client for inbound TCP/IP connections.

- **length**
  - The length of the data in the buffer.

- **safaddr**
  - The address of the SAF (security) token associated with the JES spool file for outbound data.

See z/OS Communications Server: IP Configuration Reference for more information about the EXITDIRECTION configuration statement.

**Procedure name**

CloseCompletedEvent

**EZA5555I**

```
date time Retry_Queue = retryqueue_head File_Queue dataset_name NextQueued = retryqueue_nextsite where = timing_sequence
```

**Explanation**

This diagnostic message is written to the SMTP output data set specified in the OUTPUT statement in SEXIT(SMTPPROC). This message is generated whenever the TCPDATA file has RESOLVER traces active. `date` is the current date.

`time` is the current time.

`retryqueue_head` is the pointer to the head of the retry queue for mail.

`dataset_name` is the file name pointed to by File_Queue. This data set contains a single piece of mail.

`retryqueue_nextsite` is the pointer to the next site for the mail on the retry queue.

If `timing_sequence` is 1, this is the retry queue values prior to adding or deleting from the queue. If `timing_sequence` is 2, this is the retry queue value after changes have been made.

**System action**

SMTP continues.

**Operator response**

No action is needed.

**System programmer response**

You can use the `dataset_name` and other messages generated in the trace to determine if the data set has been placed on the retry queue. `timing_sequence` applies to both this message and EZA5556I. Review the messages and their sequence to determine if you have a problem. If there is a problem, collect these traces and contact the IBM Software Support Center.

This diagnostic message is written to the SMTP output data set specified in the OUTPUT statement in SEZAINST(SMTPPROC). This message is generated whenever the TCPDATA file has RESOLVER traces active.

date is the current date.
time is the current time.
siteptr is the pointer currently being disposed of.
nextptr is the pointer to the next site for the mail. Should always be zero.

**System action**
SMTP continues.

**Operator response**
No action is needed.

**System programmer response**
siteptr shows what pointer is being disposed of (freed). Review the messages and their sequence to determine if you have a problem. If there is a problem, collect these traces and contact the IBM Software Support Center.

**Module**
SMTPQUEU

**Automation**
This message was deleted in z/OS V2R3.

**Procedure name**
DisposeSitePtr

**EZA5560I error_message**

**Explanation**
This diagnostic message is preceded by an SMTP error message. This message displays the text of the Dynamic Allocation (SVC 99 - DYNALLOC) message. This message provides additional information about why the Dynamic Allocation failed. The message might be issued multiple times to include the completer text from Dynamic Allocation.
error_message is text of the message produced by DYNALLOC.

**System action**
SMTP might halt or continue depending on the preceding SMTP error message.

**Operator response**
Notify the system programmer of the error.

**System programmer response**
Use the text of this message and the documentation describing Dynamic Allocation (DYNALLOC) in the z/OS MVS Programming: Authorized Assembler Services Guide to determine the cause of the error and respond as indicated. Most of these problems are DASD management related, so stop the SMTP started task, correct the problem, then restart the task.

**Module**
SMMVSUB

**Automation**

**Procedure name**
SMTP_s99error

**EZA5561I** RESOLVERUSAGE NO specified without a forwarding mailer

**Explanation**
SMTP resolver usage was disabled by the RESOLVERUSAGE NO statement in the hlq.SMTP.CONFIG data set and a remote mailer to handle unknown mail has not been specified. All non-local mail received by SMTP is returned as undeliverable.

**System action**
SMTP does not attempt to resolve non-local host names. Any non-local mail received by SMTP is returned as undeliverable.

**Operator response**
Notify system the programmer.

**System programmer response**
Specify a remote mailer where unknown mail will be forwarded by specifying the IPMAILERADDRESS statement or the MAILER...UNKNOWN statement. For information about the IPMAILADDRESS and the MAILER...UNKNOWN statements, see the z/OS Communications Server: IP Configuration Guide.

**Module**
SMTP

**Automation**
This message was deleted in z/OS V2R3.
DoFinalChecks

**EZA5562I Resolver Usage parm Specified**

**Explanation**
RESOLVERUSAGE was specified in the hlq.SMTP.CONFIG data set. The new value `parm` will change the current value for this configurable setting.

`parm` is either YES to attempt resolving non-local host names or NO to inhibit the resolving of non-local host names.

**System action**
If the final setting is NO, SMTP will not attempt to resolve any non-local host names. Mail will be forwarded if the IPMAILERADDRESS statement or the MAILER...UNKNOWN statement has been specified in the hlq.SMTP.CONFIG data set. For information about the IPMAILADDRESS and the MAILER...UNKNOWN statements, see the z/OS Communications Server: IP Configuration Guide.

**Operator response**

Procedure name
ServiceReaderMVS

EZA5565I  date time Read spool file filename sent by userid at nodeid using TSO XMIT

Explanation
This message is written to the SMTP sysdebug data set specified in the SYSDEBUG statement in SEZAINST(SMTPPROC). This message is generated whenever debug is active and SMTP is processing data from the JES spool. The message indicates that the spool file was sent using the TSO/E TRANSMIT(XMIT) command. This command puts certain information in its headers indicating who and where the XMIT command was issued from. The spool file is transmitted with headers, built by XMIT, that identify the originating node and user ID.

date is the current date.
time is the current time.
filename is the name of the spool file being processed by SMTP.  
 userid is the user identification taken from the XMIT headers.  
 nodeid is the NJE node identification taken from the XMIT headers.

System action
SMTP continues

Operator response
If userid or nodeid is incorrect then contact the system programmer.

System programmer response
If userid or nodeid is incorrect then check the XMIT command setup parameters.

Module
SMTPBTCH

ServiceReaderMVS

**EZA5567I**  
*filename.ADDRBLOK* was incomplete and was deleted.

**Explanation**
This message is written to the SMTP output data set specified in the OUTPUT statement in SEZAINST (SMTPPROC). This message is generated when SMTP detects a partial control block data set (*filename.ADDRBLOK*) exists. The control block data set must contain the following records:

- record 1 - header information.
- record 2 - sender information.
- record 3 - recipient information. At least one recipient record must be present.

If SMTP detects a partial data set it will delete *filename.ADDRBLOK* and any corresponding *filename.NOTE* data set. Partial data sets might be created by failures to get space on the DASD.

*filename.ADDRBLOK* is the name of the data set being deleted by SMTP.

**System action**
SMTP continues.

**Operator response**
No action is needed.

**System programmer response**
Ensure that there is enough DASD space available for SMTP to continue.

**Module**
SMTPQUEU

**Automation**
This message was deleted in z/OS V2R3.

**Procedure name**
EnqueueForDelivery

**EZA5568E**  
UNABLE TO ALLOCATE ADDRBLOK DATA SET CORRECTLY.

**Explanation**
This message is written to the SMTP output data set specified in the OUTPUT statement in SEZAINST (SMTPPROC). SMTP cannot allocate enough space for its control block data set (*.ADDRBLOK). This problem might be caused by not enough available DASD space.

**System action**
SMTP continues.

**Operator response**
Contact the system programmer.
System programmer response
If SMTP did not end, then use the MVS stop command to end SMTP. Ensure that the DASD used by SMTP is defined properly and has enough space available. Correct any DASD problem and restart SMTP.

Module

Automation
| This message was deleted in z/OS V2R3.

Procedure name
OpenOutputStreams

EZA5570E  INCORRECT VALUE parameter SPECIFIED FOR NOSOURCEROUTE STATEMENT - THE DEFAULT VALUE OF DISABLED WILL BE USED

Explanation
The input parameter following the NOSOURCEROUTE statement is invalid. The default value of DISABLED will be used instead. This means that the SMTP server will generate and pass source route addressing strings on both the MAIL FROM: and the RCPT TO: SMTP commands.
parameter shows a maximum of 10 characters of the invalid input parameter.
See the z/OS Communications Server: IP Configuration Reference for more information about the NOSOURCEROUTE configuration statement.

**System action**

SMTP continues.

**Operator response**

No action is needed.

**System programmer response**

Change the parameter associated with the NOSOURCEROUTE configuration statement to a valid parameter. Stop and restart SMTP to activate the new parameter setting.

**Module**

SMTP

**Automation**

This message was deleted in z/OS V2R3.

**Procedure name**

ProcessConfigFile

**EZA5571E date time SPOOL FILE jobid WAS DELETED DUE TO RECORD COUNT OF ZERO**

**Explanation**

The JES spool job identified in this message was intentionally deleted by the SMTP code because it contained a total record count (SSSOLNCT) of zero. See the z/OS MVS Using the Subsystem Interface for more information about the JES interface used by SMTP.

date is the current date stamp.

time is the current time stamp.

jobid is the JES spool identifier (SSSOJOBI).

**System action**

SMTP deletes the JES spool file. Processing continues.

**Operator response**

No action is needed.

**System programmer response**

Check the applications that use the JES spool for SMTP. The most probable cause for these files being created with a zero record count is an application abend.

**Module**

ServiceReaderMVS
Explanation
Indicates whether the RCPTREPLY452 statement was present in the hlq.SMTP.CONFIG file.

state is one of the following:

YES
The RCPTREPLY452 statement was present. The SMTP client interprets the 452 reply code received during RCPT command processing to mean 'too many recipients'.

NO
The RCPTREPLY452 statement was not present. The SMTP client interprets the 452 reply code received during command processing to mean 'insufficient system storage' and the mail processing is halted.

See z/OS Communications Server: IP Configuration Reference for more information about the RCPTREPLY452 configuration statement.

System action
SMTP continues.

Operator response

EZA5581E   CONFLICTING PARAMETERS ‘DATASET’ AND ‘REUSE’

Explanation
The REUSE parameter, which is used to reuse an existing temporary data set to hold notes being created by SMTPNOTE, was specified, but no temporary data set currently exists. The REUSE parameter is ignored and a new temporary data set is created.

System action
SMTPNOTE fails.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
SMTPNOTE

Procedure name
main

EZA5582E   UNABLE TO USE DATASET ‘data_set’

Explanation
SMTPNOTE is unable to access the indicated data set. This message is accompanied by messages from the operating system indicating the reason for the error.

System action
SMTPNOTE fails.

Operator response
Verify that the data set is protected. Use the DATESET parameter passed to SMTPNOTE to specify a different data set to be used. If that is not the problem, notify the system programmer of the error.

System programmer response
SMTPNOTE uses the TSO allocation (alloc) command to create a temporary data set similar to the data set passed on the DATESET parameter. The allocation command is failing. Use the messages issued by the operating
system to determine the cause of the error and respond as indicated. For more information, see the z/OS TSO/E Command Reference.

Module
SMTPNOTE

Procedure name
main

EZA5583E   UNABLE TO USE DATASET ‘data_set’, COPYING ERRORS DETECTED

Explanation
SMTPNOTE cannot use the indicated data set because it is a protected data set.

System action
SMTPNOTE fails.

Operator response
Verify that the data set logical record (LRECL) attribute is 243 or less. Also, verify that the data set is not being shared with other users when SMTPNOTE is executed. If this is not the problem, notify the system programmer of the error.

System programmer response
SMTPNOTE used the TSO REPRO command to copy the user's data into a temporary data set. This command is failing. Use the messages issued by the operating system to determine the cause of the error and respond as indicated. For more information, see the z/OS DFSMS Access Method Services Commands.

Module
SMTPNOTE

Procedure name

EZA5584E   INVALID PARAMETER, parameter

Explanation
SMTPNOTE has received an incorrect parameter. The only valid parameters for SMTPNOTE are BATCH, DEBUG, and REUSE.

System action
SMTPNOTE fails.

Operator response
Specify a valid parameter for SMTPNOTE. For more information, see the z/OS Communications Server: IP User's Guide and Commands.

System programmer response
No action is needed.
**EZA5585E**  
**BATCH PARAMETER REQUIRES DATASET PARAMETER**

**Explanation**  
The BATCH parameter was submitted without a data set name. The BATCH parameter requires a data set name to be imported into the note.

**System action**  
SMTPNOTE fails.

**Operator response**  
Resubmit the SMTPNOTE command, specifying a valid data set to be imported into the note using the BATCH parameter. For more information, see the z/OS Communications Server: IP User's Guide and Commands.

**System programmer response**  
No action is needed.

---

**EZA5586E**  
**CONFLICTING PARAMETERS ‘CC’ AND ‘NOCC’**

**Explanation**  
Both the CC parameter, which specifies addresses to be copied on a note, and the NOCC parameter, which specifies that no addresses are to be copied on the note, were specified. These parameters are mutually exclusive.

**System action**  
SMTPNOTE fails.

**Operator response**  
Submit only one of these parameters when using SMTPNOTE.

**System programmer response**  
No action is needed.
EZA5587E  NO VALUE FOR PARAMETER ‘TO’

Explanation
No address or user ID was specified in the TO field of the note being created by SMTPNOTE. Without a note or user ID in this field, the note cannot be sent.

System action
SMTPNOTE fails.

Operator response
Specify an address or user ID to receive the note in the TO field of the note. For more information, see the z/OS Communications Server: IP User’s Guide and Commands.

System programmer response
No action is needed.

Module
SMTPNOTE

Procedure name
main

EZA5588E  NO VALUE FOR PARAMETER ‘CC’

Explanation
The CC parameter was specified, indicating that one or more addresses are to be copied on the current note, but no addresses or user IDs were specified. Without an address or user ID, no copies of the note can be sent.

System action
SMTPNOTE fails.

Operator response
Resubmit the SMTPNOTE command, supplying an address or user ID to receive a copy of the note using the CC parameter. For more information, see the z/OS Communications Server: IP User’s Guide and Commands.

System programmer response
No action is needed.

Module
SMTPNOTE

Procedure name
main

EZA5589E  NO VALUE FOR PARAMETER ‘DATASET’
Explanation
The DATASET parameter, which indicates that a data set is to be imported into the note, was specified without a data set name. Without a data set name, no data set can be imported.

System action
SMTPNOTE fails.

Operator response
Resubmit the SMTPNOTE command, specifying a data set to be included in the note using the DATASET parameter. For more information, see the z/OS Communications Server: IP User's Guide and Commands.

System programmer response
No action is needed.

Module
SMTPNOTE

Procedure name
main.

EZA5590S  UNKNOWN ERROR CODE 'errcode'

Explanation
SMTPNOTE has encountered an error that it does not recognize.

System action
SMTPNOTE fails.

Operator response
Notify the system programmer of the error.

System programmer response
Obtain a trace log for the SMTP host and use this information to determine the cause of the error. If no error is apparent, contact the IBM Software Support Center for assistance.

Module
SMTPNOTE

Descriptor code
Output is returned to the user.

Automation
This message was deleted in z/OS V2R3.

Example
EZA5593I SMSG HELP Output 376
Valid SMSG Commands:
  QUEues,max=xxxx - for mail queue lengths
  NUMQueue - for total number of mail messages currently queued
  STats - for operating statistics
  Help - to get this message
  TRace - to enable resolver tracing
  NOTrace - to disable resolver tracing
  DEbug - to enable session debugging
  NOdebug - to disable session debugging
  Expire,a.b.c.d - to expire the domain name resolution for mail queued
    for delivery to this IP address
  S Shutdown - to terminate the SMTP server
  STARTEXIT - start/restart the user exit
  STOPEXIT - stop the user exit

EZA5594I  SMSG QUEUE Output

Explanation
You issued a MODIFY smtpprocname,SMSG,QUEUE command. This message displays the output from the SMSG QUEUE command, which provides information about the mail queued on the various SMTP mail delivery queues.
See the information about the *Modify command–SMSG* in *z/OS Communications Server: IP System Administrator's Commands* for more information about this output.

Procedure name
OpenOutputStreams

EZA5644E INCORRECT VALUE parameter SPECIFIED FOR DISALLOWCMD STATEMENT

Explanation
The input parameter on the DISALLOWCMD statement is invalid. The default behavior of SMTP server will be to allow these SMTP commands. The parameter must be a decimal number in the range of 1 - 31. To disable multiple commands add the individual command numbers together. The following numbers are assigned to each command:

<table>
<thead>
<tr>
<th>Command</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
</tr>
<tr>
<td>2</td>
</tr>
<tr>
<td>4</td>
</tr>
<tr>
<td>8</td>
</tr>
<tr>
<td>16</td>
</tr>
</tbody>
</table>

VERB QUEU HELP VRFY EXPN

parameter shows up to 10 characters of the input parameter that is in error.

See the z/OS Communications Server: IP Configuration Reference for more information about the DISALLOWCMD configuration statement.

System action
SMTP continues.

Operator response
No action is needed.

System programmer response
Change the parameter associated with the DISALLOWCMD configuration statement to a valid one. Stop and restart SMTP to activate the new parameter setting.

Module
SMTP
IP Mailer Name: mailername scope

Explanation
The IPMAILERNAME statement in the hlq.SMTP.CONFIG file has been set. Depending on the parameters following the statement, SMTP will modify its behavior regarding when to forward non-local mail destined for the IP network to the IP mailer name specified.

mailername is the fully qualified name of a mail server in the IP network. The length of the string being displayed is limited to 100 characters.

scope indicates whether the IP mail name should be used for all non-local mail destined for the IP network or just mail where the recipient's host is unknown to the domain name servers responding to SMTP queries. Possible values are ALL or UNKNOWN.

See z/OS Communications Server: IP Configuration Reference for more information about the IPMAILERNAME configuration statement.

System action
SMTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
SMTP

INCORRECT VALUE parameter SPECIFIED FOR IPMAILERNAME STATEMENT

Explanation
The input parameters on the IPMAILERNAME statement are not valid. There are two required parameters that must be coded. The first parameter is the IP mailer fully qualified name or host name. The first parameter must not end with a period. The second parameter is the usage scope, which must be either ALL or UNKNOWN.

In the message text:

parameter shows the first 10 characters of the input parameter that is not valid. If the parameter value is shown as <NULL>, the parameter is missing and needs to be coded. See the information about the IPMAILERNAME configuration statement in z/OS Communications Server: IP Configuration Reference.
**System action**
The SMTP server is halted.

**Operator response**
Contact the system programmer.

**System programmer response**
Change the parameter associated with the IPMAILERNAME configuration statement to a valid one. Restart SMTP.

**User response**
Not applicable.

**Problem determination**
Not applicable.

**Source**
z/OS Communications Server TCP/IP: SMTP

**Module**
SMTP

**Routing code**
2, 10

**Descriptor code**
4

**Automation**
This message was deleted in z/OS V2R3.

**Example**
The following statement is coded in the *hlq*.SMTP.CONFIG data set. This statement contains the error that the string MYHOST has an ending period:

```
IPMAILERNAME MYHOST. UNKNOWN
```

The following messages are generated when you try to start SMTP:

```
EZY1876I SMTP STACK FUNCTIONS STARTED WITH PARAMETER SMTP,PARM=, ERRFILE(SYSERR),NOSPIE/. 
EZA5646E INCORRECT VALUE MYHOST. SPECIFIED FOR IPMAILERNAME STATEMENT 
EZY1877I SMTP STACK FUNCTIONS SHUTDOWN IS COMPLETE, RC = 0. 
```

The following statement is coded in the *hlq*.SMTP.CONFIG data set. This statement contains the error that the second parameter is not ALL or UNKNOWN:

```
IPMAILERNAME MYHOST BADPARM
```

The following messages are generated when you try to start SMTP:

```
EZY1876I SMTP STACK FUNCTIONS STARTED WITH PARAMETER SMTP,PARM=, ERRFILE(SYSERR),NOSPIE/.
```
EZA5646E INCORRECT VALUE BADPARM SPECIFIED FOR IPMAILERNAME STATEMENT
EZY1877I SMTP STACK FUNCTIONS SHUTDOWN IS COMPLETE, RC = 0.

EZA5647E date time POTENTIAL LOOP DETECTED USING IPMAILERNAME ipmailername

Explanation
The IPMAILERNAME statement has been configured in the hlq.SMTP.CONFIG data set. SMTP has resolved the IPMAILERNAME statement and the only IP address in the IP address list is a home IP address for the system currently running SMTP. This configuration is not valid, and can cause mail to loop or to be delivered to the wrong mailbox.

In the message text:

date
  The date when the message is issued.

time
  The time when the message is issued.

ipmailername
  The fully qualified name of a mail server in the IP network. The length of the string being displayed is limited to 100 characters.

System action
There are two possible system actions when a home IP address is the only address in the IP list:

- If the IPMAILERNAME statement has the parameter ALL configured, SMTP terminates.
- If the IPMAILERNAME statement has the parameter UNKNOWN configured, SMTP continues. The mail becomes undeliverable.

Operator response
No action is needed.

System programmer response
Check that the IP mailer name is correct. If the name is correct, then activate resolver traces in SMTP to understand how SMTP is resolving the ipmailername value. Remove the home IP address from the list of addresses associated with the IPMAILERNAME in the DNS data base or local host tables. See the information about the SMTP RESOLVER trace in z/OS Communications Server: IP Diagnosis Guide.

User response
Not applicable.

Problem determination
Not applicable.

Automation

This message was deleted in z/OS V2R3.

Example

The following statement is coded in the hlq.SMTP.CONFIG data set. This statement contains the error that the string MVS7 is also the name of the system running the SMTP:

```
IPMAILERNAME MVS7 ALL
```

The following messages are generated after you start SMTP and the first note is being processed. When SMTP resolves the name MVS7 it will have the same IP addresses as the home list for this system. Because the ALL parameter is coded, all the mail will be forwarded. The mailer cannot forward mail to itself, therefore, the SMTP is terminated:

```
IEF695I START SMTP WITH JOBNAME SMTP IS ASSIGNED TO USER IBMUSER GROUP SYS1
$HASP373 SMTP STARTED
IEF403I SMTP - STARTED - TIME=14.20.40
EZY1876I SMTP STACK FUNCTIONS STARTED WITH PARAMETER SMTP,PARM=,
ERRFILE(SYSERR),NOSPIE/.
IEA631I OPERATOR USER1 NOW INACTIVE, SYSTEM=MVS7, LU=L7201A
EZA5647E 11/03/05 14:22:51 POTENTIAL LOOP DETECTED USING IPMAILERNAME MVS7.TCP.RALEIGH.IBM.COM
EZY1877I SMTP STACK FUNCTIONS SHUTDOWN IS COMPLETE, RC = 0.
```

EZA5648I MaxMsgSent: number

Explanation

This message indicates the maximum number of messages that can be sent on a single TCP/IP connection. This value is set on the MAXMSGSENT statement, which is optional, in the SMTP configuration file. The number 0 indicates that no limit is set, 0 is the default if the statement is not coded. Setting this value might affect performance. Lower values might cause slower mail processing.

In the message text:

```
number
```

A decimal value in the range 0 - 2 147 483 647.

See the information about the MAXMSGSENT in z/OS Communications Server: IP Configuration Reference.

System action

SMTP continues.

Operator response

No action is needed.

System programmer response

No action is needed.

User response

Not applicable.
Problem determination

z/OS Communications Server TCP/IP: SMTP

Module
SMTP

Routing code
Not applicable.

Descriptor code
Not applicable.

Automation
This message was deleted in z/OS V2R3.

Example

```
EZA5648I MaxMsgSent : 20
```

This message would be generated in the file associated with the OUTPUT DD card for SMTP started task when MAXMSGSENT 20 is specified in the SMTP configuration file and SMTP is started.

**EZA5649E INVALID MAXMSGSENT VALUE: value**

Explanation
An incorrect value was specified on the MAXMSGSENT statement coded in the SMTP configuration file. This value represents a limit on the number of messages that the SMTP client can send over a single TCP/IP connection.

In the message text:

**Value**
- The incorrectly specified value.

System action
SMTP ends.

Operator response
Contact the system programmer.

System programmer response
Check the SMTP configuration file and specify a valid decimal number in the range 0 - 2 147 483 647 on the MAXMSGSENT statement. The value 0 indicates that no limit is set; 0 is the default if the statement is not coded. Setting this value might affect performance. Lower values might cause slower mail processing.

See the information about the MAXMSGSENT in z/OS Communications Server: IP Configuration Reference.

OPENOUTPUTSTREAMS

EZA5652I  currentdate  currenttime  CurrentNumMail:  currentnumber  MaxNumMail:  maxnumber  at maxdate  maxtime

Explanation
This message is issued when debugging is on. The message displays the number of pieces of mail that are currently queued in SMTP, and the maximum number of pieces of mail that has been queued in SMTP has been. This display also indicates the time and date when the maximum limit occurred.

In the message text:

currentdate  The date this message was displayed.

currenttime  The time this message was displayed.

currentnumber  The number of pieces of mail currently queued up in SMTP.

maxnumber  The maximum number of pieces of mail that has been queued in SMTP.

maxdate  The date when the maximum number of pieces of mail was queued in SMTP.

maxtime  The time when the maximum number of pieces of mail was queued in SMTP.

System action

EZA5691I  MSG EXPIRE Output - Syntax not Valid - Expecting an IP address

Explanation
The EXPIRE command expects an IP address.

System action
SMTP continues.

Operator response
Fix the syntax error and re-issue the command. The correct syntax is MODIFY smtpprocname,SMSG,EXPIRE,ipaddr.

Problem determination
None.

Source
z/OS Communications Server TCP/IP: SMTP

Module
SMTPSMSG

Routing code
Output is returned to the user.

Descriptor code
Output is returned to the user.
EZA5692I  SMSG EXPIRE Output - ipaddr - No Mail Found

Explanation
You issued a MODIFY smtpprocname,SMSG,EXPIRE command. This message displays the output from the command. The domain name resolution for mail queued for delivery to this IP address expires when this command is issued. SMTP tries to resolve the IP addresses for mail again if the mail is still within the retry time period. In this case, there is no mail queued for that IP address.

In the message text:

ipaddr
The address for which the EXPIRE command has been issued.

System action
SMTP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

User response
Not applicable.

Problem determination
None.

z/OS Communications Server TCP/IP: SMTP

Module
SMTPSMSG

Routing code
Output is returned to the user.

Descriptor code
Output is returned to the user.

Automation
This message was deleted in z/OS V2R3.

Example
EZA5692I  SMSG EXPIRE Output - 123.123.123.123 - No Mail Found

EZA5693I  SMSG EXPIRE Output - ipaddr - Try Later
**Explanation**
You issued a MODIFY smtpprocname,SMSG,EXPIRE command. This message displays the output from the command. This command causes the domain name resolution for mail queued for delivery to this IP address to expire. SMTP will again try to resolve the IP addresses for mail if the mail is still within the retry time window. Mail needs to be on the retry queue for the EXPIRE command to work.

In the message text:

`ipaddr`
The address for which the EXPIRE command has been issued.

**System action**
SMTP continues.

**Operator response**
Try again later when the mail for that IP address is in the retry queue. Use the MODIFY smtpprocname,SMSG,QUEUE command to determine when the mail is on the retry queue.

**System programmer response**
Not applicable.

**User response**
Not applicable.

6

Automation
This message was deleted in z/OS V2R3.

Example
EZA5701I EZBMCOPY is processing MODIFY command keyword WRITER=SMTPD

EZA5702I EZBMCOPY ignored unsupported keyword word
**Explanation**

EZBMCOPY was started with a parameter that it does not support, or a MODIFY command for EZBMCOPY was issued and specified a keyword that EZBMCOPY does not support. For example, if the JCL for the EZBMCOPY job specifies PARM='SELHOLD', EZBMCOPY ignores the keyword SELHOLD that is not supported. If the command MODIFY EZBMCOPY, DEST=SMTPD is issued, then EZBMCOPY ignores the DEST=SMTPD keyword that is not supported.

**System action**

EZBMCOPY continues.

**Operator response**

No action is needed.

**System programmer response**

If the EZBMCOPY JCL contains an unsupported keyword, correct the JCL.

If a MODIFY command was issued with an unsupported keyword, the command should be modified and issued again.

**User response**

No action is needed.

**Problem determination**

Not applicable.

**Source**

z/OS Communications Server TCP/IP

**Procedure name**
Main

---

**EZA5779E  Error error IN VTAM OPEN**

**Explanation**
SNALINK encountered an error issuing a VTAM OPEN request.

**System action**
SNALINK abends.

**Operator response**
Check that VTAM is operational.

**System programmer response**
Check the SNALINK parameters for the correct VTAM_APPL_ID. Contact your VTAM administrator.

**Module**
SNALINK
**Procedure name**
Main

**EZA5780I**  Init complete, APPLID *id*, TCPIP *id*

**Explanation**
SNALINK is running.

**System action**
Processing continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
SNALINK

**Procedure name**
 pendconn

**EZA5781I**  Maximum RU size is *value*

**Explanation**
This message displays the hexadecimal value of the maximum RU size.

**System action**
Processing continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
SNALINK

**Procedure name**
Main

**EZA5782S**  TPEND exit called with reason *value*

**Explanation**
SNALINK exits with the indicated reason code.
System action
SNALINK exits.

Operator response
No action is needed.

System programmer response
Correct the error indicated by the reason code.

Module
SNALINK

Procedure name
Main

EZA5783I date time {luname} | Received STOP command or HALT sub-command, shutting down

Explanation
The operator has entered a MODIFY command specifying HALT or a STOP command. SNALINK begins to shut down normally.

System action
SNALINK terminates.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
SNALINK ASSEMBLE

Procedure name
PROCCONS/PROCMODF

EZA5784E Can not free path index table storage

Explanation
SNALINK encountered an error while freeing storage.

System action
SNALINK exits.

Operator response
No action is needed.
System programmer response
Check the MVS system for system problems.

Module
SNALINK

Procedure name
Main

EZA5785E Unexpected iptype type received

Explanation
SNALINK received an IUCV interrupt with an unexpected or out-of-range type.

System action
SNALINK abends.

Operator response
No action is needed.

System programmer response
This error indicates a probable TCPIP code problem. Contact the IBM Software Support Center.

Module
SNALINK

Prociucv

EZA5787E Can’t find CONNBLOK for severed path path

Explanation
SNALINK received a SEVER interrupt from TCPIP, but could not find the associated connection in its tables. The connection is severed.

System action
SNALINK continues processing.

Operator response
No action is needed.

System programmer response
This message indicates a probable TCPIP code problem. Contact the IBM Software Support Center.

Module
SNALINK
EZA5788E   PENDCONN received from wrong TCPIP id id

Explanation
SNALINK received a Connection Pending interrupt from a TCPIP ID other than the one specified on the command line. The pending connection is severed.

System action
SNALINK continues processing.

Operator response
No action is needed.

System programmer response
Check TCPIP parameters (MVS) for the correct TCPIP data set.

Module
SNALINK

EZA5789E   Cannot connect to LU name — No more CONNBLOKs!

Explanation
SNALINK does not have enough data structures (CONNBLOKs) allocated to service a pending connection. The pending connection is severed. If existing connections are later closed, resources are freed to allow SNALINK to service this connection.

System action
SNALINK continues processing.

Operator response
No action is needed.

System programmer response
Increase the maximum connections allowed.

Module
SNALINK

EZA5790S   Severing pending conn because existing session not killed
Explanation
SNALINK received a Connection Pending interrupt for this LU. However, a connection already exists for this LU. The pending connection is severed.

System action
SNALINK continues processing.

Operator response
No action is necessary if the connection you want is up; otherwise, stop and restart SNALINK.

System programmer response
This error indicates that TCPIP is out of sync or that there is a code problem.

Module
SNALINK

Procedure name
pendconn

EZA5795E Unexpected GENTYPE value found

Explanation
SNALINK encountered an incorrect GENTYPE value when processing a VTAM exit.

System action
SNALINK abends.

Operator response
No action is needed.

System programmer response
This error indicates a possible TCPIP code problem. Contact the IBM Software Support Center.

Module
SNALINK

Procedure name
procvtam

EZA5796E Unexpected control field value IN SCIP exit

Explanation
SNALINK encountered an incorrect control field in a SCIP information block, while SNALINK was either acting as an SLU for a connection and waiting for the PLU to establish the connection, or receiving an UNBIND request.

System action
SNALINK ignores the SCIP exit and resumes processing.
**Operator response**
Tell your VTAM administrator.

**System programmer response**
No action is needed.

**Module**
SNALINK

**Procedure name**
vtamscip

**EZA5797E Rejecting bind from plu - no DLC found**

**Explanation**
SNALINK received a BIND request from the indicated primary LU. It is rejecting the BIND request because it cannot find an associated pending DLC connection in its tables.

**System action**
The BIND request is rejected.

**Operator response**
Use the NETSTAT command to check that TCPIP started SNALINK.

**System programmer response**
No action is needed.

**Module**
SNALINK

**Procedure name**
scipbind

**EZA5798E Rejecting bind - already have receive session**

**Explanation**
SNALINK received a BIND request for an LU on which it has already established communication.

**System action**
The BIND request is rejected.

**Operator response**
Tell your VTAM administrator.

**System programmer response**
This error indicates a possible VTAM problem.
Module
SNALINK

Procedure name
scipbind

EZA5799I  Received BIND request for SNA receive session

Explanation
A BIND request has been received.

System action
Processing continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
SNALINK

Procedure name
scipfoun

EZA5800E  Error in MODCB NIB for receive session. R15 value R0 value

Explanation
SNALINK encountered an error modifying a network information block in preparation for an OPNSEC call to accept a BIND for this LU.

System action
The BIND request is rejected.

Operator response
Tell your VTAM administrator.

System programmer response
This error indicates a possible TCPIP code problem. Contact the IBM Software Support Center.

Module
SNALINK

Procedure name
scipfoun

EZA5801I  Got UNBIND for receive session
### Explanation

An UNBIND request has been received.

### System action

The session is brought down.

### Operator response

No action is needed.

### System programmer response

No action is needed.

### Module

SNALINK

### Procedure name

scipunbd

#### EZA5802I  Got UNBIND for send session

**Explanation**

An UNBIND request has been received.

**System action**

The session is brought down.

**Operator response**

No action is needed.

**System programmer response**

No action is needed.

### Module

SNALINK

### Procedure name

scipunbd

#### EZA5803E  Zero user word in SCIP exit for UNBIND

**Explanation**

SNALINK encountered a user word containing zero in an UNBIND request, indicating a null connection block address.

**System action**

The UNBIND request is not processed.
Operator response
No action is needed.

System programmer response
This error indicates a possible TCPIP or VTAM code problem. Tell your VTAM administrator.

Module
SNALINK

Procedure name
scipunbd

EZA5804E CID in SCIP UNBIND parm list not found

Explanation
SNALINK received an UNBIND request that was not associated with either the send or receive session on its LU.

System action
The UNBIND request is not processed.

Operator response
No action is needed.

System programmer response
This error indicates a possible VTAM or TCPIP code problem. See the VTAM console for more information.

Module
SNALINK

Procedure name
scipunbd

EZA5805I TESTCB shows send session not established

Explanation
SNALINK received a VTAM OPNDST EXIT interrupt specifying a session that has not been established.

System action
SNALINK ends the connection.

Operator response
No action is needed.

System programmer response
This error indicates a possible VTAM or TCPIP code problem.
Module
SNALINK

Procedure name
vtamopnd

EZA5806E   OPNDST exit can’t find CONNBLOK. RPL addr address

Explanation
SNALINK received a VTAM OPNDST EXIT interrupt for which it has no associated connection block.

System action
SNALINK abends.

Operator response
No action is needed.

System programmer response
This error indicates a possible VTAM or TCPIP code problem.

Module
SNALINK

Procedure name
vtamopnd

EZA5807I   SNA send session established

Explanation
An SNA send session was established.

System action
Processing continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
SNALINK

Procedure name
vtamopnd

EZA5808I   TESTCB shows receives session not established
**Explanation**
SNALINK received a VTAM OPNSEC EXIT interrupt specifying a session that has not been established.

**System action**
SNALINK ends the connection.

**Operator response**
No action is needed.

**System programmer response**
This error indicates a possible VTAM or TCPIP code problem. Tell your VTAM administrator.

**Module**
SNALINK

**Procedure name**
vtamopns

**EZA5809E  OPNSEC exit can’t find CONNBLOK. RPL addr address**

**Explanation**
SNALINK received a VTAM OPNSEC EXIT interrupt for which it has no corresponding connection block. SNALINK abends.

**System action**
SNALINK abends.

**Operator response**
No action is needed.

**System programmer response**
This error indicates a possible VTAM or TCPIP code problem.

**Module**
SNALINK

**Procedure name**
vtamopns

**EZA5810I  SNA receive session established**

**Explanation**
An SNA receive session was established.

**System action**
Processing continues.
Operator response
No action is needed.

System programmer response
No action is needed.

Module
SNALINK

Procedure name
vtamopnd

**EZA5811E**  SEND exit finds zero RPLUSFLD

Explanation
SNALINK received a VTAM SEND EXIT interrupt with a null connection block pointer.

System action
SNALINK abends.

Operator response
No action is needed.

System programmer response
This error indicates a possible VTAM or TCPIP error.

Module
SNALINK

Procedure name
vtamsend

**EZA5812E**  RECEIVE-ANY shows RESPOND value CONTROL control RH value

Explanation
SNALINK handled a RECEIVE-ANY interrupt with the indicated fields.

System action
SNALINK ends the connection, if one exists. Otherwise, the interrupt is ignored.

Operator response
No action is needed.

System programmer response
Tell your VTAM administrator.
Module
SNALINK

Procedure name
rcvisany

EZA5813E  Chaining err: Flags flag Buffer buffer Pointer pointer

Explanation
SNALINK encountered an inconsistency in its buffer chain.

System action
SNALINK ends the connection.

Operator response
No action is needed.

System programmer response
This error indicates a possible TCPIP code problem.

Module
SNALINK

Procedure name
rcvchker

EZA5814E  RECEIVE exit finds zero RPLUSFLD

Explanation
SNALINK encountered a VTAM RECEIVE EXIT interrupt with a null connection block pointer.

System action
SNALINK abends.

Operator response
No action is needed.

System programmer response
This error indicates a possible VTAM or TCPIP problem.

Module
SNALINK

Procedure name
vtamrcv

EZA5815I  RECEIVE-ANY shows RESPOND value CONTROL control RH value
Explanation
SNALINK handled a RECEIVE-ANY interrupt with the indicated fields.

System action
Processing continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
SNALINK

Procedure name
vtamrcv

EZA5816E  CLSDST exit can’t find CONNBLOK. RPL addr address

Explanation
SNALINK received a VTAM CLSDST EXIT interrupt with an incorrect connection block pointer.

System action
SNALINK abends.

Operator response
Restart SNALINK.

System programmer response
This error indicates a possible VTAM or TCPIP code problem. See the VTAM console for more information.

Module
SNALINK

Procedure name
vtamclsd

EZA5817E  TERMSESS exit can’t find CONNBLOK. RPL addr address

Explanation
SNALINK received a VTAM TERMSESS EXIT interrupt with an incorrect connection block pointer.

System action
SNALINK abends.
**Operator response**
Tell your VTAM administrator.

**System programmer response**
No action is needed.

**Module**
SNALINK

**Procedure name**
vtamterm

**EZA5818I**  
LOTERM reason rc for receive session

**Explanation**
SNALINK received a VTAM LOSTERM EXIT interrupt, which indicates that this LU lost its receive session for the indicated reason code.

**System action**
SNALINK ends the connection.

**Operator response**
Check your hardware or VTAM for errors.

**System programmer response**
No action is needed.

**Module**
SNALINK

**Procedure name**
vtamlost

**EZA5819I**  
LOTERM reason rc for send session

**Explanation**
SNALINK received a VTAM LOSTERM EXIT interrupt, which indicates that this LU lost its receive session for the indicated reason code.

**System action**
SNALINK ends the connection.

**Operator response**
Check your hardware or VTAM for errors.

**System programmer response**
No action is needed.
Module
SNALINK

Procedure name
vtamlost

**EZA5820I**  Zero CONNBLOK ptr in LOSTERM exit, reason rc

**Explanation**
SNALINK received a VTAM LOSTERM EXIT interrupt with a null connection block pointer.

**System action**
SNALINK abends.

**Operator response**
No action is needed.

**System programmer response**
This error indicates a possible VTAM or TCPIP problem. Tell your VTAM administrator.

Module
SNALINK

Procedure name
vtamlost

**EZA5821I**  CID in LOSTERM parm list not found, reason rc

**Explanation**
SNALINK received a VTAM LOSTERM EXIT interrupt for which it has no parameter list.

**System action**
SNALINK ignores the interrupt.

**Operator response**
No action is needed.

**System programmer response**
This error indicates a possible VTAM or TCPIP code problem. See the VTAM console for more information.

Module
SNALINK

Procedure name
vtamlost

**EZA5822I**  NSEXIT CLEANUP request for receive session
Explanation
SNALINK received a VTAM NSEXIT interrupt with a cleanup request for this LU's receive session.

System action
SNALINK ends the connection.

Operator response
Check your hardware or VTAM for errors.

System programmer response
No action is needed.

Module
SNALINK

Procedure name
vtamns

EZA5823I NSEXIT CLEANUP request for send session

Explanation
SNALINK received a VTAM NSEXIT interrupt with a cleanup request for this LU's send session.

System action
SNALINK ends the connection.

Operator response
Check your hardware or VTAM for errors.

System programmer response
No action is needed.

Module
SNALINK

Procedure name
vtamns

EZA5824E Zero CONNBLOK ptr in NSEXIT exit

Explanation
SNALINK received a VTAM NSEXIT interrupt with a null connection block pointer.

System action
SNALINK abends.
Operator response
No action is needed.

System programmer response
This error indicates a possible VTAM or TCPIP problem. Tell your VTAM administrator.

Module
SNALINK

Procedure name
vtamns

EZA5825E  CID in NSEXIT parm list not found

Explanation
SNALINK received a VTAM NSEXIT interrupt for which an associated parameter list could not be found.

System action
SNALINK ignores the interrupt.

Operator response
No action is needed.

System programmer response
This error indicates a possible VTAM or TCPIP code problem. See the VTAM console for more information.

Module
SNALINK

Procedure name
vtamns

EZA5826I  Sending BIND request for SNA send session

Explanation
SNALINK is trying to establish the connection. The other side should have a DLC path pending.

System action
Processing continues.

Operator response
No action is needed.

System programmer response
No action is needed.
Module
SNALINK

Procedure name
dovtopnd

EZA5827E   Error in MODCB NIB for send session. R15 value R0 value

Explanation
SNALINK received a VTAM OPNDST interrupt but encountered an error when processing the OPNDST. An error indication is returned to the caller.

System action
The BIND request is rejected.

Operator response
Tell your VTAM administrator.

System programmer response
This error indicates a possible TCPIP code problem.

Module
SNALINK

Procedure name
dovtopnd

EZA5828I   Cannot issue OPNDST - Previous OPNDST active

Explanation
SNALINK encountered an error processing a VTAM OPNDST request. The associated request parameter list (RPL) is in use, indicating a previous OPNDST is active.

System action
SNALINK does not process the VTAM OPNDST request.

Operator response
No action is needed.

System programmer response
This error indicates a possible TCPIP code problem.

Module
SNALINK

Procedure name
dovtopnd

EZA5829I   Accepting DLC path
**Explanation**  
A BIND was received. SNALINK accepts a DLC connection to TCPIP.

**System action**  
Processing continues.

**Operator response**  
No action is needed.

**System programmer response**  
No action is needed.

**Module**  
SNALINK

**Procedure name**  
douiacc

---

**EZA5830E  Error error accepting DLC path**

**Explanation**  
SNALINK encountered an error in a DLC ACCEPT request.

**System action**  
SNALINK ends the current connection and returns to its caller.

**Operator response**  
No action is needed.

**System programmer response**  
This error indicates a possible TCPIP code problem.

**Module**  
SNALINK

**Procedure name**  
Main

---

**EZA5831E  Error error sending on DLC path**

**Explanation**  
SNALINK encountered an error sending data on a DLC path.

**System action**  
SNALINK ends the current connection.
Operator response
No action is needed.

System programmer response
This error indicates a possible system problem.

Module
SNALINK

Procedure name
doiusnd

EZA5832E  Error error receiving on DLC path

Explanation
SNALINK encountered an error receiving data on a DLC path.

System action
SNALINK ends the current connection.

Operator response
Check that TCPIP is operational.

System programmer response
This error indicates a possible TCPIP code problem.

Module
SNALINK

Procedure name
doiusrcv

EZA5833E  Error error severing DLC path

Explanation
SNALINK encountered an error severing a DLC path.

System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
Respond as indicated by the error portion of this message.
Module
SNALINK

Procedure name
dosever

**EZA5834E**  Error *error* in VTAM CLOSE

Explanation
SNALINK encountered an error closing an ACB.

System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
Respond as indicated by the *error* portion of this message.

Module
SNALINK

Procedure name
closeacb

**EZA5835E**  Error in GENCB RPL. R15 value R0 value

Explanation
SNALINK received an error from a GENCB RPL call.

System action
SNALINK resumes processing. More errors can result.

Operator response
No action is needed.

System programmer response
Check the error indication.

Module
SNALINK

Procedure name
setupcon

**EZA5836E**  Error in GENCB NIB. R15 value R0 value
Explanation
SNALINK received an error from a GENCB NIB call.

System action
SNALINK resumes processing. More errors can result.

Operator response
No action is needed.

System programmer response
Check the error indication.

Module
SNALINK

Procedure name
setupcon

EZA5837E  function err. R15 value R0 value RTNCD rc FDBK2 value

Explanation
SNALINK encountered an error in the indicated function. The associated sense code returned by VTAM is displayed.

System action
Based on the sense code, TCPIP either tries again, ends the session, or ignores the error and continues processing.

Operator response
No action is needed.

System programmer response
Tell your VTAM administrator.

Module
SNALINK

Procedure name
prtrpler

EZA5838E  function CHECK err. R15 value R0 value RTNCD rc FDBK2 value

Explanation
SNALINK encountered an error in the indicated function. The associated sense code returned by VTAM is displayed.
**System action**
Based on the sense code, TCPIP either tries again, ends the session, or ignores the error and continues processing.

**Operator response**
No action is needed.

**System programmer response**
Tell your VTAM administrator.

**EZA5848E**  LOSTERM received, reason *rc*

**Explanation**
A LOSTERM request was received.

**System action**
SNALINK ends the connection.

**Operator response**
Check your hardware or VTAM for problems.

**System programmer response**
No action is needed.

**Module**
SNALINK

**Procedure name**
vtramlost

**EZA5849E**  NSEXIT CLEANUP request for session

**Explanation**
A VTAM NSEXIT interrupt with cleanup request was received.

**System action**
SNALINK ends the connection.

**Operator response**
Check your hardware or VTAM for problems.

**System programmer response**
No action is needed.

**Module**
SNALINK
Procedure name
vtamns

EZA5850I Sending SNA BIND request

Explanation
A connection is being established.

System action
Processing continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
SNALINK

Procedure name
vtamlgon

EZA5851E Rejecting logon attempt from \textit{id} - no DLC found

Explanation
There is no corresponding DLC connection to TCPIP for the indicated ID. No connection is established.

System action
Processing continues.

Operator response
Check that the SNALINK device is running.

System programmer response
No action is needed.

Module
SNALINK

Procedure name
vtamlgon

EZA5852E Rejecting logon attempt - already have a session with \textit{id}

Explanation
A BIND request was received for an LU that has already established a connection.
System action
The BIND is not accepted.

Operator response
Tell your VTAM administrator.

System programmer response
No action is needed.

Module
SNALINK

Procedure name
vtamlgon

EZA5853I  Processing LOGON exit

Explanation
The requested logon is being processed.

System action
A BIND request is sent.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
SNALINK

Procedure name
vtamlgon

EZA5854E  Invalid number of sessions, using default of 6 sessions

Explanation
The maximum session parameter is not valid.

System action
Processing continues.

Operator response
No action is needed.
System programmer response
To avoid this error, correct the maximum session parameter.

Module
SNALINK

Procedure name
main

EZA5855E Invalid delay interval, using default of 15 minutes

Explanation
The retry interval parameter is not valid.

System action
Processing continues.

Operator response
No action is needed.

System programmer response
To avoid this error, correct the retry interval parameter.

Module
SNALINK

Procedure name
main

EZA5856I REPLY X TO SHUT DOWN

Explanation
SNALINK is shutting down.

System action
TCP/IP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
SNALINK
**Max Sessions value : Retry Interval value**

**Explanation**
This message displays the values set for the maximum number of sessions and the retry interval being used by SNALINK.

**System action**
Processing continues.

**Operator response**
Correct the values if necessary.

**System programmer response**
No action is needed.

**Command is too long, truncating**

**Explanation**
The operator has entered a MODIFY command that is longer than 254 characters. If the first 254 characters of the command are syntactically correct then the command is executed with no additional messages. Otherwise, additional messages will be generated.

**System action**
Processing continues.

**Operator response**
The command should be reentered as several shorter commands.

**System programmer response**
No action is needed.

**Invalid MODIFY sub-command.**
Explanation
The operator has entered a MODIFY command with a subcommand which was neither HALT nor PKTTRACE. The command is ignored.

System action
Processing continues.

Operator response
Specify the MODIFY command with either the HALT or PKTTRACE subcommand.

System programmer response
No action is needed.

Module
SNALINK ASSEMBLE

Procedure name
PROCMODF

EZA5868W  date time {luname} | START CIB not freed, MODIFY Commands restricted

Explanation
An error occurred during the initialization of MODIFY command processing. The command input buffer (CIB) containing the START command was not freed from the task CIB chain. This is an internal error. It will not cause a system problem.

System action
SNALINK continues.

Operator response
No action is needed.

System programmer response
Contact the IBM Software Support Center to report this error. MODIFY commands may result in IEE342I messages from the MVS operating system. See z/OS MVS System Messages, Vol 7 (IEB-IEE) for an explanation of the IEE342I message.

Module
SNALINK ASSEMBLE

Procedure name
MAIN

EZA5869E  date time {luname} | PKTTRACE Disabled, TCP/IP links not connected

Explanation
The operator has attempted to issue a PKTTRACE subcommand before TCPIP has connected to SNALINK.
SNALINK receives link information from TCPIP before establishing VTAM sessions. Packet tracing is enabled when link information has been received from TCPIP. The PKTTRACE subcommand is ignored.

**System action**
Processing continues.

**Operator response**
Wait for the IUCV connection between TCPIP and SNALINK to be established and reenter the command.

**System programmer response**
No action is needed.

**Module**
SNALINK ASSEMBLE

**Procedure name**
PROC MODF

**EZA5926I**  LU62CFG: Starting Pass value of value

**Explanation**
The indicated pass number of the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG has just been started. If errors are not detected in earlier passes, the data set is parsed by way of the number of indicated passes.

**System action**
Processing continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
LU62INIT

**Procedure name**
RLCFG#P1, RLCFG#P2

**EZA5927I**  LU62CFG: No Errors Detected - Initialization will Continue

**Explanation**
No errors were detected in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG.

**System action**
Initialization continues.
Operator response
No action is needed.

System programmer response
No action is needed.

Module
LU62INIT

Procedure name
L62ENTRY

**EZA5928I**  LU62CFG: Errors Detected - Address Space will Terminate

Explanation
One or more errors were detected during the parsing of the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG.

System action
The address space shuts down immediately.

Operator response
No action is needed.

System programmer response
See the previous console messages and messages written to the SYSPRINT data set to determine the exact nature of the errors. Correct the errors, and restart the SNALINK LU6.2 interface.

Module
LU62INIT

Procedure name
L62ENTRY

**EZA5929I**  Address Space address Already Active - this Address Space will Terminate

Explanation
The indicated address space is already running; each instance of a SNALINK LU6.2 interface should have a unique address space name.

System action
This address space shuts down immediately.

Operator response
No action is needed.

System programmer response
If multiple SNALINK LU6.2 address spaces are required, each one should have a unique name.
Module
LU62INIT

Procedure name
L62ENTRY

**EZA5930I**  Errors Detected in VTAM Initialization - Address Space will Terminate

**Explanation**
One or more errors were detected during the initialization of the interface with the VTAM subsystem.

**System action**
The address space shuts down immediately.

**Operator response**
No action is needed.

**System programmer response**
See the previous console messages and messages written to the SYSPRINT data set to determine the exact nature of the errors. If possible, correct the errors, and restart the SNALINK LU6.2 interface. Otherwise, if the previous error messages indicate a potential program logic error, contact the IBM Software Support Center.

Module
LU62INIT

Procedure name
L62ENTRY

**EZA5931I**  Errors Detected in DLC Initialization - Address Space will Terminate

**Explanation**
One or more errors were detected during the initialization of the DLC interface between the SNALINK LU6.2 address space and the TCPIP address space.

**System action**
The address space shuts down immediately.

**Operator response**
No action is needed.

**System programmer response**
See the previous console messages and messages written to the SYSPRINT data set to determine the exact nature of the errors. If possible, correct the errors, and restart the SNALINK LU6.2 interface. Otherwise, if the previous error messages indicate a potential program logic error, contact the IBM Software Support Center.

Module
LU62INIT
Initialization complete - Applid: application TCP/IP: address

Explanation
The initialization of the SNALINK LU6.2 interface has been successfully completed. The indicated application ID is used for VTAM-related communication, and DLC connections are only accepted from the indicated address space.

System action
Processing continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
LU62VTAM

Link name opened

Explanation
A DLC connection associated with the indicated TCPIP link has been successfully opened. Datagrams to and from destinations associated with the indicated link are passed between the TCPIP address space and the SNALINK LU6.2 address space using the DLC connection.

System action
Processing continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
LU62IUCV

Establishing connection with name for address
**Explanation**

An SNA LU type 6.2 connection has been initiated with the indicated remote LU name. This connection is used as the medium through which data to and from the indicated IP address are transferred.

**System action**

Processing continues.

**Operator response**

No action is needed.

**System programmer response**

No action is needed.

**Module**

LU62IUCV

**Procedure name**

IUCVPMES

**EZA5935I**  
Send conversation allocated for *address*

**Explanation**

The SNA LU type 6.2 conversation that is used for sending data to the destination node associated with the indicated IP address has been successfully established. IP datagrams addressed to the indicated address are sent to the destination node using the send conversation.

**System action**

Processing continues.

**Operator response**

No action is needed.

**System programmer response**

No action is needed.

**Module**

LU62VTAM

**Procedure name**

VTAMALOC

**EZA5936I**  
Receive conversation allocated for *address*

**Explanation**

The SNA LU type 6.2 conversation to be used for receiving data from the destination node associated with the indicated IP address has been successfully established. IP datagrams from the indicated IP address are transferred to the local node using the receive conversation.
System action
Processing continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
LU62VTAM

Procedure name
VTAMALOC

EZA5937I   Link name closed

Explanation
The DLC connection associated with the indicated TCPIP link has been closed. The SNALINK LU6.2 interface attempts to buffer any datagrams received from destination nodes associated with the indicated link. However, if the link is not reestablished before the buffer space is exhausted, incoming datagrams are discarded. The TCPIP address space is responsible for the reconnection of the DLC link.

System action
Processing continues.

Operator response
No action is needed.

System programmer response
If the SNALINK LU6.2 address space is not shut down, check the reason for the severing of the DLC connection. The TCPIP address space might have been shut down or abended.

Module
LU62IUCV

Procedure name
IUCVSEVR, IUCVCMES

EZA5938I   Received operator shutdown request

Explanation
A console command requesting the orderly shutdown of the SNALINK LU6.2 interface has been received and is processed immediately.

System action
The SNALINK LU6.2 address space shuts down immediately.
Operator response
No action is needed.

System programmer response
No action is needed.

Module
LU62MAIN

Procedure name
MAINPROC

EZA5939I TPEND exit called with reason rc

Explanation
A VTAM shutdown notification was received resulting in the invocation of the TPEND exit routine. The indicated reason code was passed to the exit routine.

System action
The SNALINK LU6.2 address space shuts down immediately.

Operator response
No action is needed.

System programmer response
Determine the cause of the VTAM shutdown notification. For more information about VTAM shutdown notifications see z/OS Communications Server: SNA Programmer’s LU 6.2 Reference.

Module
LU62MAIN

Procedure name
MAINPROC

EZA5940I TCPIP ADDRESS SPACE NAME SET TO AddressSpaceName

Explanation
The TCPIP address space name to be used by SNALINK LU6.2 has been set to AddressSpaceName. It corresponds to the value of the TCPIPJOBNAME statement found in TCPIP.DATA.

System action
Processing continues.

Operator response
No action is needed.
System programmer response
Check that the indicated name is the correct TCPIP address space name to be used by SNALINK LU6.2. If the name is incorrect, specify the correct name as the value of the TCPIP DATA TCPIPJOBNAME statement and restart the SNALINK LU6.2 application.

Module
LU62INIT

Procedure name
READTCPD

EZA5950W LU62CFG: Line number: DEST statement - Blank Connection Start Type, type assumed

Explanation
The indicated line of the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG contains a DEST statement that does not include a specification of when the connection to the destination is to be established. The indicated start type value is assumed. The indicated start type value is used for the destination defined on the indicated line of the configuration data set.

System action
Processing continues.

Operator response
No action is needed.

System programmer response
Check that the indicated start type is the required start type value for the destination. If the value is incorrect, correct the SNALINK LU6.2 configuration data set, and restart the SNALINK LU6.2 address space.

Module
LU62INIT

Procedure name
RLCFG#P2

EZA5951W LU62CFG: Line number: BUFFERS statement - Blank number of Additional Send Buffers, value assumed

Explanation
The indicated line of the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG contains a BUFFERS statement that does not include a specification of the number of additional send buffers to be allocated for each destination. The indicated default value is assumed. The number of additional send buffers allocated for each destination is the indicated number.

System action
Processing continues.

Operator response
No action is needed.
System programmer response
Check that the indicated number is the required number of additional send buffers for each destination. If the number is incorrect, correct the SNALINK LU6.2 configuration data set, and restart the SNALINK LU6.2 address space.

Module
LU62INIT

Procedure name
RLCFG#P1

EZA5952W   LU62CFG: Line number: BUFFERS statement - Blank Send Queue Limit, value assumed

Explanation
The indicated line of the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG contains a BUFFERS statement that does not include a specification of the send queue limit to be enforced for each destination. The indicated default value is assumed.

System action
Processing continues.

Operator response
No action is needed.

System programmer response
Check that the indicated number is the required send queue limit to be enforced for each destination. If the number is incorrect, correct the SNALINK LU6.2 configuration data set, and restart the SNALINK LU6.2 address space.

Module
LU62INIT

Procedure name
RLCFG#P1

EZA5953W   LU62CFG: Line number: LINK statement - Blank Idle Timeout, seconds assumed

Explanation
The indicated line of the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG contains a LINK statement that does not include a specification of the idle timeout to be used for all connections associated with the link. The indicated default number of seconds is assumed. Inactive connections for the current link are closed after the indicated number of seconds of inactivity.

System action
Processing continues.

Operator response
No action is needed.
System programmer response
Check that the indicated number of seconds is the required idle timeout value for each destination associated
with the link. If the number of seconds is incorrect, correct the SNALINK LU6.2 configuration data set, and
restart the SNALINK LU6.2 address space.

Module
LU62INIT

Procedure name
RLCFG#P2

EZA5954W NO TCPIP.DATA FILE ACCESSED - ADDRESS SPACE NAME TCPIP ASSUMED

Explanation
The TCPIP address space name to be used by SNALINK LU6.2 has been set to TCPIP. This is the default value. It
has been assigned because no TCPIPUSERID or TCPIPJOBNAME TCPIP.DATA statement was found.

System action
Processing continues.

Operator response
No action is needed.

System programmer response
If the name is incorrect, specify the correct name as the value of the TCPIP.DATA TCPIPJOBNAME statement.
Also check that the SYSTCPD DD statement for the SNALINK LU6.2 procedure has the correct TCPIP.DATA file
specified. After making any changes restart the SNALINK LU6.2 application.

Module
LU62INIT

Procedure name
READTCPD

EZA5959I CANCEL Command Accepted - Address Space will Abend

Explanation
A CANCEL subcommand was entered from an operator console (using the MODIFY console command).

System action
The SNALINK LU6.2 address space abends immediately. If the SYSUDUMP ddname is defined, a dump is
produced.

Operator response
No action is needed.

System programmer response
No action is needed.
**Module**
LU62MDFY

**Procedure name**
MODIFY

**EZA5960I**  
**HALT Command Accepted - Address Space will Shutdown**

**Explanation**
A HALT subcommand was entered from an operator console (using the MODIFY console command).

**System action**
The SNALINK LU6.2 shuts down immediately.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
LU62MDFY

**Procedure name**
MODIFY

**EZA5961I**  
**Establishment of Connection to IP Address address Initiated**

**Explanation**
The establishment of a connection to the destination node identified by the indicated IP address has been requested by a RESTART subcommand entered from an operator console (using the MODIFY console command).

**System action**
A connection to the indicated IP address is initiated.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
LU62MDFY

**Procedure name**
STRTCONN

**EZA5962I**  
**Drop of Connection to IP Address address Initiated**
Explanation
The termination of a connection with the destination node identified by the indicated IP address has been requested by a DROP subcommand entered from an operator console (using the MODIFY console command).

System action
The connection with the indicated IP address is closed.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
LU62MDFY

Procedure name
DROPCONN

EZA5963I TRACE Command Completed

Explanation
The trace level specified in a TRACE subcommand entered from an operator console (using the MODIFY console command) has been set for the specified destinations. The new trace levels take effect immediately.

System action
Processing continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
LU62MDFY

Procedure name
TRACE

EZA5964I address (Disconnected)

Explanation
This message is output on the operator console in response to a LIST subcommand (entered using the MODIFY console command). It indicates that no connection with the indicated IP address has been established during the current invocation of the SNALINK LU6.2 address space.
System action
Processing continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
LU62MDFY

Procedure name
LISTCONN

EZA5965I  address (Disconnected on date at time)

Explanation
This message is output on the operator console in response to a LIST subcommand (entered using the MODIFY console command). It indicates that no connection with the indicated IP address currently exists, but a connection was disconnected at the indicated time on the indicated date. The date is in Julian date format (yy.ddd), and the time is in standard 24-hour clock format (hh:mm:ss).

System action
Processing continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
LU62MDFY

Procedure name
LISTCONN

EZA5966I  address (Connected on date at time)

Explanation
This message is output on the operator console in response to a LIST subcommand (entered using the MODIFY console command). It indicates that a connection with the indicated IP address currently exists; it was established at the indicated time on the indicated date. The date is in Julian date format (yy.ddd), and the time is in standard 24-hour clock format (hh:mm:ss). Further details of the status of this connection are output on the console (using a multiline WTO).

System action
Processing continues.
Operator response
No action is needed.

System programmer response
No action is needed.

Module
LU62MDFY

Procedure name
LISTCONN

EZA5967I  Connected via: type Trace Level: level

Explanation
This message is output on the operator console following message EZA5966I to provide further details of the connection identified in the EZA5966I message.

The indicated type describes why the connection was established:

• Data. Connection established either because a datagram was sent or received to or from the destination node, or an INIT option was processed by the destination node;
• Init. Connection established because of the INIT option in the configuration data set;
• Restart. Connection established because of the RESTART subcommand entered on console (using MODIFY console command).

The indicated trace level indicates the current level of tracing in force for the connection ("On," "Off," or "Detail"). Further details of the status of this connection are output on the console (using a multiline WTO).

System action
Processing continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
LU62MDFY

Procedure name
LISTCONN

EZA5968I  SEND:- Status: status Packets Out: value

Explanation
This message is output on the operator console following messages EZA5966I and EZA5967I to provide further details of the connection identified in the EZA5966I message.

The indicated status value describes the current status of the send conversation with the conversation node:
- Allocated. Conversation is allocated and ready to send data.
- Not Allocated. Conversation is either yet to be started, or has just been deallocated.
- Pending Alloc. Allocation of conversation has been initiated but not yet completed.
- Pending Dealloc. Deallocation of the conversation has been initiated but not yet completed.

The indicated value describes the number of datagrams sent to the destination node during the period that the current connection has existed. Further details of the status of this connection are output on the console (using a multiline WTO).

**System action**
Processing continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
LU62MDFY

**Procedure name**
LISTCONN

**EZA5969I**  
RECV:- Status: status  
Packets In: value

**Explanation**
This message is output on the operator console following messages EZA5966I, EZA5967I and EZA5968I to provide further details of the connection identified in the EZA5966I message.

The indicated status describes the current status of the receive conversation with the conversation node:
- Allocated. Conversation is allocated and ready to receive data.
- Not Allocated. Conversation is either yet to be started, or has just been deallocated.
- Pending Alloc. Allocation of conversation has been initiated but not yet completed.
- Pending Dealloc. Deallocation of conversation has been initiated but not yet completed.

The indicated value describes the number of datagrams received from the destination node during the period that the current connection has existed. This is the last line in the multiline message for a connected destination.

**System action**
Processing continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.
Module
LU62MDFY

Procedure name
LISTCONN

**EZA5970I** LIST Accepted; Range = Single Connection

**Explanation**
A LIST subcommand requesting details of the connection status for a single destination has been entered from an operator console (using the MODIFY console command). Subsequent messages are written to the operator console showing the connection status for the specified destination.

**System action**
Processing continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**EZA5991I**  
**IP datagram added to the pending message queue, bytes= length**

**Explanation**  
This message is written to the SYSPRINT data set when detailed tracing is enabled and an IP datagram, which was extracted from a logical record received from VTAM, was loaded into the VTAM-pending message queue. Datagrams are only loaded into the VTAM-pending message queue if the DLC message buffer is either full or currently being sent to the TCPIP address space. Entries in the queue are placed in the DLC message buffer (and subsequently sent to TCPIP) once the current buffer has been successfully sent to the TCPIP address space. The indicated length is the length of the IP datagram placed on the queue. Message EZA5985I appears following this message.

**EZA5996I**  Number of IP packets received on *address = value*

**Explanation**
This message is written to the SYSPRINT data set when detailed tracing is enabled and an IP datagram has just been received, using VTAM, from the destination node associated with the indicated IP address. The indicated number is the number of IP datagrams received from the indicated IP address during the current invocation of the SNALINK LU6.2 address space, including the datagram that triggered this message.
System action
Processing continues. One or more lines of message EZA5999I appear following this message to show the contents of the datagram just received.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
LU62VTAM

Procedure name
VTAMRECV

EZA5997I  Connection address will timeout in seconds seconds

Explanation
This message is written to the SYSPRINT data set when detailed tracing is enabled and the inactivity timeout value for the connection associated with the indicated IP address has just been recalculated. The indicated number of seconds is the time until the connection is due to timeout unless the connection is used within that period. If the connection with the indicated IP address is not used within the indicated number of seconds, the connection is closed.

System action
Processing continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
LU62VTAM

Procedure name
RESTIMER

EZA5998I  VTAM connection has reached timeout period and expired

Explanation
This message is written to the SYSPRINT data set when detailed tracing is enabled and the inactivity timeout period for a connection has expired. Message EZA5985I is written to the SYSPRINT data set following this message to identify the connection involved. The connection identified in message EZA5985I, which follows this message, is closed.
**System action**
Processing continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
LU62VTAM

**Procedure name**
RESTIMER

**EZA5999I datagram**

**Explanation**
This message is written to the SYSPRINT data set when detailed tracing is enabled. It contains a hexadecimal dump of the contents of an IP datagram and is repeated until the entire datagram has been dumped. Each of these messages shows the hexadecimal representation of 40 bytes of data from the datagram. Trailing nulls (X'00') are used to fill the last message for a datagram if required. This message is repeated until the contents of the entire datagram have been written to SYSPRINT.

**System action**
Processing continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
LU62VTAM

**Procedure name**
HEXDUMP
Chapter 8. EZA6xxxx messages

EZA6009W    Conversations for address terminated

Explanation
The send and receive conversations comprising the connection to the destination node associated with the indicated IP address have been closed. The connection was closed for one of the following reasons:

• An allocation failure occurred.
• One of the conversations was closed because of a VTAM error or command.
• The connection was closed using a DROP subcommand entered from an operator console (using the MODIFY console command).
• The inactivity timeout period for the connection expired.
• The destination node closed one or both conversations.

Internal data structures are reinitialized to allow the connection to be restarted when required.

System action
Processing continues.

Operator response
No action is needed.

System programmer response
If the termination was caused by an error, see the preceding messages in the SYSPRINT data set to determine the exact nature of the problem.

Module
LU62VTAM

Procedure name
CLEARCON

EZA6010E    Receive error for address, what received= value, length= length

Explanation
An incomplete logical record was received from the destination node associated with the indicated IP address. The indicated value is the what received field returned from VTAM. The indicated length is the number of bytes received. This error can be caused by the SNALINK LU6.2 transaction program on the destination node that does not conform to the protocol defined in the relevant RFC.

System action
The connection is closed. Processing continues.

Operator response
No action is needed.
System programmer response
See the z/OS Communications Server: SNA Programmer's LU 6.2 Reference for an explanation of the received value. If possible, correct the error; otherwise, contact the IBM Software Support Center.

Module
LU62VTAM

Procedure name
VTAMRECV

**EZA6011E** Unable to allocate send conversation for address

Explanation
The send conversation could not be allocated with the destination node associated with the indicated IP address. Preceding messages in the SYSPRINT data set indicate the exact nature of the problem.

System action
Processing continues; the connection is closed.

Operator response
No action is needed.

System programmer response
See the preceding messages to determine the nature of the problem.

Module
LU62VTAM

Procedure name
VTAMALOC

**EZA6012E** Unable to flush the FMH5 for address

Explanation
The send conversation could not be allocated with the destination node associated with the indicated IP address. The Function Management Header (FMH5) could not be flushed. Messages EZA6029E to EZA6032E are also written to the SYSPRINT data set to describe the exact nature of the problem.

System action
Processing continues; the connection is closed.

Operator response
No action is needed.

System programmer response
See messages EZA6029E to EZA6032E in the SYSPRINT data set to determine the nature of the problem.
**EZA6013W** Unable to deallocate conversation for *address*

**Explanation**
A send and receive conversation with the destination node associated with the indicated IP address could not be deallocated. Messages EZA6029E to EZA6032E are also written to the SYSPRINT data set to describe the exact nature of the problem.

**System action**
Processing continues; the connection is closed.

**Operator response**
No action is needed.

**System programmer response**
See messages EZA6029E to EZA6032E in the SYSPRINT data set to determine the nature of the problem.

---

**EZA6014W** Rejecting receive conversation allocation attempt for *address*

**Explanation**
An attempt to allocate a receive conversation with the destination node associated with the indicated IP address was rejected.

**System action**
Processing continues; the connection is closed.

**Operator response**
No action is needed.

**System programmer response**
See the preceding messages in the SYSPRINT data set to determine the nature of the problem.
EZA6015W  A conversation allocation attempt has been lost

Explanation
A conversation allocation attempt has been unsuccessful because the Function Management Header (FMH5) was not received correctly. Messages EZA6029E to EZA6032E are also written to the SYSPRINT data set to describe the exact nature of the problem.

System action
Processing continues; the connection is closed.

Operator response
No action is needed.

System programmer response
See messages EZA6029E to EZA6032E in the SYSPRINT data set to determine the nature of the problem.

Module
LU62VTAM

Procedure name
VTAMATTN

EZA6016W  Not authorized to accept conversation allocation attempt from lu.

Explanation
A conversation allocation attempt was received from the indicated logical unit, but the logical unit is not defined in the SNALINK LU6.2 configuration data set.

System action
Processing continues; the conversation allocation attempt is rejected.

Operator response
No action is needed.

System programmer response
Correct the SNALINK LU6.2 configuration data set and restart the SNALINK LU6.2 address space.

Module
LU62VTAM

Procedure name
VTAMATTN

EZA6017W  VTAM event queue full, event lost

Explanation
The VTAM event queue has overflowed, and an event has been lost.
**System action**  
The SNALINK LU6.2 address space attempts to continue; however, more problems might occur with VTAM interactions.

**Operator response**  
No action is needed.

**System programmer response**  
Contact the IBM Software Support Center.

**Module**  
LU62VTAM

**Procedure name**  
PUTVTAM

**EZA6018W Unable to reject conversation for address**

**Explanation**  
An error was encountered while attempting to reject a receive conversation allocation attempt from the destination node associated with the indicated IP address. Messages EZA6029E to EZA6032E are also written to the SYSPRINT data set to describe the exact nature of the problem.

**System action**  
Processing continues; the connection is closed.

**Operator response**  
No action is needed.

**System programmer response**  
See messages EZA6029E to EZA6032E in the SYSPRINT data set to determine the nature of the problem.

**Module**  
LU62VTAM

**Procedure name**  
VTAMATTN

**EZA6019W Unable to find destination entry for lu; partner for lost conversation**

**Explanation**  
A loss notification was received from VTAM for a conversation with the indicated logical unit; however, the logical unit is not defined in the SNALINK LU6.2 configuration data set. The loss notification is ignored.

**System action**  
Processing continues.
**Operator response**
No action is needed.

**System programmer response**
Potential problem in either VTAM or SNALINK LU6.2. Contact the IBM Software Support Center.

**Module**
LU62VTAM

**Procedure name**
VTAMATTN

---

**EZA6020W**  
Lost send conversation for *address*

**Explanation**
A loss notification has been received from VTAM for the send conversation for the connection with the destination node associated with the indicated IP address.

**System action**
Processing continues; the connection is closed.

**Operator response**
No action is needed.

**System programmer response**
See the VTAM diagnostic messages to determine the reason for the conversation loss.

**Module**
LU62VTAM

**Procedure name**
VTAMATTN

---

**EZA6021W**  
Lost receive conversation for *address*

**Explanation**
A loss notification has been received from VTAM for the receive conversation for the connection with the destination node associated with the indicated IP address.

**System action**
Processing continues; the connection is closed.

**Operator response**
No action is needed.

**System programmer response**
See the diagnostic messages output by the SNALINK LU6.2 transaction program on the destination node to determine the reason for the conversation loss.
Module
LU62VTAM

Procedure name
VTAMATTN

**EZA6022W**  Closing conversations for *address*

**Explanation**
The connection to the destination node associated with the indicated IP address is being closed because of an error condition encountered during processing. Preceding error messages in the SYSPRINT data set describe the exact nature of the problem.

**System action**
Processing continues; the connection is closed.

**Operator response**
No action is needed.

**System programmer response**
See the preceding messages in the SYSPRINT data set to determine the nature of the problem.

Module
LU62VTAM

Procedure name
VTAMSEND, DOVTSEND, VTAMRECV, DOVTRECV

**EZA6023W**  Unable to complete CNOS on LU lu for *address*

**Explanation**
The CNOS macro invocation for the indicated logical unit was unsuccessful. The CNOS macro is the first VTAM macro executed in the conversation allocation process. This error condition occurs when the indicated LU name is either incorrect or unreachable. Messages EZA6029E to EZA6032E are also written to the SYSPRINT data set to describe the exact nature of the problem.

**System action**
Processing continues; the connection is closed.

**Operator response**
No action is needed.

**System programmer response**
See messages EZA6029E to EZA6032E in the SYSPRINT data set to determine the nature of the problem.
**EZA6024E**  DLC event queue full, event lost

**Explanation**
The DLC event queue has overflowed, and an event has been lost.

**System action**
The SNALINK LU6.2 address space abends with 3C5 reason 105.

**Operator response**
No action is needed.

**System programmer response**
Contact the IBM Software Support Center.

**Module**
LU62IUCV

**Procedure name**
PUTIUCV

**EZA6025E**  Unable to allocate receive conversation for *address*

**Explanation**
The allocation of the receive conversation with the destination node associated with the indicated IP address was unsuccessful. Preceding messages in the SYSPRINT data set indicate the exact nature of the problem.

**System action**
Processing continues; the connection is closed.

**Operator response**
No action is needed.

**System programmer response**
See the preceding messages to determine the nature of the problem.

**Module**
LU62VTAM

**Procedure name**
VTAMALOC

**EZA6026E**  Unable to initiate conversation allocation with *lu* for *address*
Explanation
A conversation allocation request for the indicated logical unit was rejected by VTAM. This can be because of incorrect LU or mode names, or corrupted request blocks, control blocks, or both. Messages EZA6029E to EZA6032E are also written to the SYSPRINT data set to describe the exact nature of the problem.

System action
Processing continues; the connection is closed.

Operator response
No action is needed.

System programmer response
See messages EZA6029E to EZA6032E in the SYSPRINT data set to determine the nature of the problem.

Module
LU62VTAM

Procedure name
DOVTALOC

EZA6027E  Error rc in VTAM OPEN

Explanation
An error occurred in opening the Access Method Control Block (ACB) defined in the VTAM statement in the SNALINK LU6.2 configuration data set. The indicated return code is the ACB error value returned by VTAM.

System action
The SNALINK LU6.2 address space shuts down immediately.

Operator response
No action is needed.

System programmer response
If the return code = 5A, then verify that the VTAM APPL on the VTAM statement in TCPIPL62.TCPIPL62.CONFIG data set is defined in your VTAM list and has been activated. If other return codes are issued with this message, see z/OS Communications Server: SNA Programmer's LU 6.2 Reference to find the meaning of the indicated ACB error value returned by VTAM.

Module
LU62VTAM

Procedure name
VTAMINIT

EZA6028E  Error flag in VTAM CLOSE

Explanation
An error occurred in closing the Access Method Control Block (ACB) defined in the VTAM statement in the SNALINK LU6.2 configuration data set. The indicated flag is the ACB error flag value returned by VTAM.
**System action**
The SNALINK LU6.2 address space shuts down immediately.

**Operator response**
No action is needed.

**System programmer response**
See the VTAM diagnostic documentation to determine the meaning of the indicated flag.

**Module**
LU62VTAM

**Procedure name**
CLOSEACB

---

**EZA6029E**  
**command err. R15 value R0 value RTNCD rc FDBK2 rc**

**Explanation**
The indicated VTAM APPC command was unsuccessful. The indicated value for R15 is the value returned using general register 15. The indicated value for R0 is the value returned using general register 0. The indicated return code for RTNCD is the return code returned from the APPC command. The indicated return code for FDBK2 is the value of the feedback return code returned using the RPL.

**System action**
Processing continues; messages EZA6030E to EZA6032E are also written to the SYSPRINT data set following this message to further describe the error condition encountered.

**Operator response**
No action is needed.

**System programmer response**
See z/OS Communications Server: SNA Programmer's LU 6.2 Reference for a description of the meanings of each of the values reported in this message.

**Module**
LU62VTAM

**Procedure name**
PRTRPXER

---

**EZA6030E**  
**command err. RCPRI= rc, RCSEC= rc**

**Explanation**
The indicated VTAM APPC command was unsuccessful. This message follows message EZA6029E to further describe the error encountered. The indicated return code for RCPRI is the value returned from VTAM using the primary return code field of the RPL. The indicated return code for RCSEC is the secondary return code value. Messages EZA6031E and EZA6032E are also written to the SYSPRINT data set following this message to further describe the error condition encountered.
System action
Processing continues.

Operator response
No action is needed.

System programmer response
See z/OS Communications Server: SNA Programmer's LU 6.2 Reference for a description of the meanings of the primary and secondary return code values reported in this message.

Module
LU62VTAM

Procedure name
PRTRPXER

EZA6031E  command err. Sense code received: value

Explanation
The indicated VTAM APPC command was unsuccessful. This message follows messages EZA6029E and EZA6030E to further describe the error encountered. The indicated sense code is the sense code value returned from VTAM. Message EZA6032E is also written to the SYSPRINT data set following this message to further describe the error condition encountered.

System action
Processing continues.

Operator response
No action is needed.

System programmer response
See z/OS Communications Server: SNA Programmer's LU 6.2 Reference for a description of the sense code values.

Module
LU62VTAM

Procedure name
PRTSENSE

EZA6032E  command err. Sense code specified: value

Explanation
The indicated VTAM APPC command was unsuccessful. This message follows messages EZA6029E to EZA6031E to further describe the error encountered. The indicated sense code is the sense code value specified on the VTAM macro invocation that was unsuccessful.

System action
Processing continues.
Operator response
No action is needed.

System programmer response
See z/OS Communications Server: SNA Programmer's LU 6.2 Reference for a description of the sense code values.

Module
LU62VTAM

Procedure name
PRTSENSE

EZA6046E Rejecting DLC path for link, not configured

Explanation
A DLC path allocation request has been received from the TCPIP address space for the indicated link, but the link is not defined by a LINK statement in the SNALINK LU6.2 configuration data set. The DLC path allocation request is rejected.

System action
Processing continues.

Operator response
No action is needed.

System programmer response
Correct the hlq.PROFILE.TCPIP data set or the SNALINK LU6.2 configuration data set, so that the link names used in each data set correspond exactly.

Module
LU62IUCV

Procedure name
IUCVPCON

EZA6047E Rejecting DLC path for link, bad entry setup

Explanation
A DLC path allocation request has been received from the TCPIP address space for the indicated link, but an error was encountered in creating the corresponding DLC table entry. The DLC path allocation request is rejected. The error detected was either that the SNALINK LU6.2 address space has insufficient free storage to allocate the buffers required for the link to be established, or an active entry already exists in the DLC table data structure. A preceding message in the SYSPRINT data set identifies the exact nature of the error.

System action
Processing continues.
**Operator response**
No action is needed.

**System programmer response**
If insufficient storage caused the error, increase the REGION size for the SNALINK LU6.2 address space, and restart the address space.

**Module**
LU62IUCV

**Procedure name**
IUCVPCON

**EZA6048E**  Error rc accepting DLC path

**Explanation**
An error was encountered during the establishment of a DLC path between the TCPIP address space and the SNALINK LU6.2 address space. The DLC path allocation request is rejected. The indicated return code is the code returned using register 15 from the accept attempt.

**System action**
Processing continues.

**Operator response**
Check that the TCPIP address space is active.

**System programmer response**
Check the TCPIP log data set for an indication of the nature of the error. Attempt to try the path establishment again by restarting the SNALINK LU6.2 device from within TCPIP. If the error persists, contact the IBM Software Support Center.

**Module**
LU62IUCV

**Procedure name**
DOIUACC

**EZA6049E**  Error rc sending on DLC path

**Explanation**
An error was encountered while sending data using a DLC path to the TCPIP address space. The DLC path is severed. The indicated return code is the code returned using register 15 from the send attempt.

**System action**
Processing continues.

**Operator response**
Check that the TCPIP address space is active.
System programmer response
Check the TCPIP log data set for an indication of the nature of the error. Attempt to reestablish the IUCV path by restarting the SNALINK LU6.2 device from within TCPIP. If the error persists, contact the IBM Software Support Center.

Module
LU62IUCV

Procedure name
DOIUSEND

EZA6050E   Error rc receiving on DLC path

Explanation
An error was encountered while receiving data using a DLC path from the TCPIP address space. The DLC path is severed. The indicated return code is the code returned using register 15 from the receive attempt.

System action
Processing continues.

Operator response
Check that the TCPIP address space is active.

System programmer response
Check the TCPIP log data set for an indication of the nature of the error. Attempt to reestablish the IUCV path by restarting the SNALINK LU6.2 device from within TCPIP. If the error persists, contact the IBM Software Support Center.

Module
LU62IUCV

Procedure name
DOIURECV

EZA6051E   Error rc severing DLC path

Explanation
An error was encountered while severing a DLC path between the TCPIP address space and the SNALINK LU6.2 address space. The indicated return code is the code returned using register 15 from the sever attempt.

System action
Processing continues as though the DLC path was successfully severed.

Operator response
Check that the TCPIP address space is active.
**System programmer response**

Check the TCPIP log data set for an indication of the nature of the error. If problems are encountered in the subsequent reestablishment of the path, shut down, and restart the SNALINK LU6.2 address space. If the error persists, contact the IBM Software Support Center.

**Module**

LU62IUCV

**Procedure name**

DOIUSEVR

**EZA6052E Error rc in DLC initialization**

**Explanation**

An error was encountered during the DLC initialization. The indicated return code is the code returned using register 15 from the initialization routine.

**System action**

The SNALINK LU6.2 address space shuts down immediately.

**Operator response**

Check that the TCPIP address space is active.

**System programmer response**

Check the TCPIP log data set for an indication of the nature of the error. Restart the SNALINK LU6.2 address space. If the error persists, contact the IBM Software Support Center.

**Module**

LU62IUCV

**Procedure name**

IUCVINIT

**EZA6059W Error encountered in processing name - dataset closed**

**Explanation**

An I/O error was detected during the processing of the data set defined by the indicated ddname. This message is accompanied by message EZA6060W, which describes the nature of the error detected.

**System action**

Message EZA6060W is output to indicate the nature of the error detected, and the data set is closed.

**Operator response**

No action is needed.

**System programmer response**

Locate the accompanying message EZA6060W to identify the nature of the error.
Module
LU62IO

Procedure name
OPENOUT, OPENINP, PUTDS, GETDS, CLOSED

EZA6060W  IO_error_message

Explanation
This message accompanies message EZA6059W; the indicated error message describes the nature of the I/O error detected.

System action
See message EZA6059W.

Operator response
No action is needed.

System programmer response
The indicated error message was constructed using the SYNADAF system macro. See the documentation for this macro to determine the exact nature of the I/O error encountered. Correct the error, and restart the SNALINK LU6.2 address space.

Module
LU62IO

Procedure name
OPENOUT, OPENINP, PUTDS, GETDS, CLOSED

EZA6061W  Abend code-rc trapped in operation for name - dataset closed

Explanation
An abend condition was encountered during the running of the indicated operation on the data set defined by the indicated ddname. The abend was trapped and the address space allowed to continue.

System action
Processing continues; the data set is closed by the system.

Operator response
No action is needed.

System programmer response
Determine the nature of the abend condition using the indicated Abend code and reason code values, correct the problem, and restart the SNALINK LU6.2 address space.
Procedure name
OPENOUT, OPENINP, PUTDS, GETDS, CLOSEDS

EZA6062W Error in open of name - output to dataset will be suppressed

Explanation
An error was encountered during the opening of the output data set defined by the indicated ddname. All attempts to write to the data set are suppressed.

System action
Processing continues.

Operator response
No action is needed.

System programmer response
See previous error messages to determine the nature of the problem, correct the problem, and restart the SNALINK LU6.2 address space.

Module
LU62INIT

Procedure name
L62ENTRY

EZA6063W Error in open of name - no data will be read

Explanation
An error was encountered during the opening of the input data set defined by the indicated ddname.

System action
Processing continues as though the input data set was empty.

Operator response
No action is needed.

System programmer response
See previous error messages to determine the nature of the problem, correct the problem, and restart the SNALINK LU6.2 address space.

Module
LU62INIT

Procedure name
L62ENTRY

EZA6064W Record Format of name must be either F or V - dataset closed
Explanation
An unexpected record format was encountered during the open of the input data set defined by the indicated ddname. Only fixed- or variable-length record formats are supported.

System action
Processing continues as though the input data set was empty.

Operator response
No action is needed.

System programmer response
Correct the record format of the data set, and restart the SNALINK LU6.2 address space.

Module
LU62IO

Procedure name
GETDS

EZA6065W Error in read of name - dataset closed

Explanation
An error was encountered during a read operation on the data set defined by the indicated ddname.

System action
Processing continues as though an end-of-file condition was encountered.

Operator response
No action is needed.

System programmer response
See previous error messages to determine the nature of the problem, correct the problem, and restart the SNALINK LU6.2 address space.

Module

EZA6074E MODIFY sub-command missing

Explanation
A MODIFY command was entered for the SNALINK LU6.2 address space from an operator console, but no subcommand was specified. The command is ignored.

System action
Processing continues.
Operator response
Enter the MODIFY command in the correct format.

System programmer response
No action is needed.

Module
LU62MDFY

Procedure name
MODIFY

EZA6075E  Invalid MODIFY sub-command

Explanation
A MODIFY command was entered for the SNALINK LU6.2 address space from an operator console, but the subcommand specified was not recognized by the SNALINK LU6.2 address space. The command is ignored.

System action
Processing continues.

Operator response
Enter the MODIFY command in the correct format.

System programmer response
No action is needed.

Module
LU62MDFY

Procedure name
MODIFY

EZA6076W  DROP: No Current Connection to IP Address address

Explanation
A DROP subcommand, which included the indicated IP address in the specified address range, was entered from an operator console (using the MODIFY console command), but there was no current connection to that destination. The rest of the connections in the address range are closed.

System action
Processing continues.

Operator response
No action is needed.

System programmer response
No action is needed.
Module
LU62MDFY

Procedure name
DROPCONN

**EZA6077W  RESTART: Connection to IP Address address Already Established**

**Explanation**
A RESTART subcommand, which included the indicated IP address in the specified address range, was entered from an operator console (using the MODIFY console command), but there was already a connection established with that destination. Connections are established with the rest of the destinations in the address range.

**System action**
Processing continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

Module
LU62MDFY

Procedure name
STRTCONE

**EZA6078E  DROP: IP⁄LU⁄ALL Expected after DROP**

**Explanation**
The syntax of a DROP subcommand entered from an operator console (using the MODIFY console command) was incorrect. The command is ignored.

**System action**
Processing continues.

**Operator response**
Enter the command using the correct syntax.

**System programmer response**
No action is needed.

Module
LU62MDFY

Procedure name
DROP
**EZA6079E**  
*command: ‘=’ Expected after IP*

**Explanation**
The syntax of the indicated subcommand entered from an operator console (using the MODIFY console command) was incorrect. The command is ignored.

**System action**
Processing continues.

**Operator response**
Enter the command using the correct syntax.

**System programmer response**
No action is needed.

**Module**

EZA6083E  command: ‘=’ Expected after LU

Explanation
The syntax of the indicated subcommand entered from an operator console (using the MODIFY console command) was incorrect. The command is ignored.

System action
Processing continues.

Operator response
Enter the command using the correct syntax.
**System programmer response**
No action is needed.

**Module**
LU62MDFY

**Procedure name**
DROP, LIST, RESTART

---

**EZA6084E command: LU Name Expected after ‘LU=’**

**Explanation**
The syntax of the indicated subcommand entered from an operator console (using the MODIFY console command) was incorrect. The command is ignored.

**System action**
Processing continues.

**Operator response**
Enter the command using the correct syntax.

**System programmer response**
No action is needed.

**Module**
LU62MDFY

**Procedure name**
DROP, LIST, RESTART

---

**EZA6085E command: Invalid Format for LU Name**

**Explanation**
The LU name contained in the indicated subcommand entered from an operator console (using the MODIFY console command) was longer than 8 characters. The command is ignored.

**System action**
Processing continues.

**Operator response**
Enter the command using the correct syntax.

**System programmer response**
No action is needed.

**Module**
LU62MDFY
**Procedure name**
DROP, LIST, RESTART

**EZA6086E**  *command*: LU Name Not Defined in Configuration Dataset

**Explanation**
The LU name contained in the indicated subcommand entered from an operator console (using the MODIFY console command) is not defined in the SNALINK LU6.2 configuration data set. The command is ignored.

**System action**
Processing continues.

**Operator response**
Enter the command using a valid LU name.

**System programmer response**
No action is needed.

**Module**
LU62MDFY

**Procedure name**
DROP, LIST, RESTART

**EZA6087E**  RESTART: Invalid Range Specified - IP,LU,INIT or ALL expected

**Explanation**
The syntax of a RESTART subcommand entered from an operator console (using the MODIFY console command) was incorrect. The command is ignored.

**System action**
Processing continues.

**Operator response**
Enter the command using the correct syntax.

**System programmer response**
No action is needed.

**Module**
LU62MDFY

**Procedure name**
RESTART

**EZA6088E**  LIST: Invalid Range Specified - IP,LU,ACTIVE or ALL expected
Explanation
The syntax of a LIST subcommand entered from an operator console (using the MODIFY console command) was incorrect. The command is ignored.

System action
Processing continues.

Operator response
Enter the command using the correct syntax.

System programmer response
No action is needed.

Module
LU62MDFY

Procedure name
LIST

EZA6089E  TRACE: ON/OFF/DETAIL or ALL/IP expected after TRACE

Explanation
The syntax of a TRACE subcommand entered from an operator console (using the MODIFY console command) was incorrect. The command is ignored.

System action
Processing continues.

Operator response
Enter the command using the correct syntax.

System programmer response
No action is needed.

Module
LU62MDFY

Procedure name
TRACE

EZA6090E  TRACE: ALL/IP expected after ON/OFF/DETAIL

Explanation
The syntax of a TRACE subcommand entered from an operator console (using the MODIFY console command) was incorrect. The command is ignored.

System action
Processing continues.
Operator response
Enter the command using the correct syntax.

System programmer response
No action is needed.

Module
LU62MDFY

Procedure name
TRACE

**EZA6091E**  TRACE: ‘=’ expected after IP

Explanation
The syntax of a TRACE subcommand entered from an operator console (using the MODIFY console command) was incorrect. The command is ignored.

System action
Processing continues.

Operator response
Enter the command using the correct syntax.

System programmer response
No action is needed.

Module
LU62MDFY

Procedure name
TRACE

**EZA6092E**  TRACE: IP address expected after ‘=’

Explanation
The syntax of a TRACE subcommand entered from an operator console (using the MODIFY console command) was incorrect. The command is ignored.

System action
Processing continues.

Operator response
Enter the command using the correct syntax.

System programmer response
No action is needed.
**Module**
LU62MDFY

**Procedure name**
TRACE

**EZA6093E**  TRACE: Invalid format for fully qualified IP address

**Explanation**
The IP address contained in a TRACE subcommand entered from an operator console (using the MODIFY console command) was not in the required format. The IP address should be in the correct dotted-decimal format for a network node (for example, 192.9.207.100). The command is ignored.

**System action**
Processing continues.

**Operator response**
Enter the command using the correct syntax.

**System programmer response**
No action is needed.

**Module**
LU62MDFY

**Procedure name**
TRACE

**EZA6094E**  TRACE: IP address not defined in Configuration dataset

**Explanation**
The IP address contained in a TRACE subcommand entered from an operator console (using the MODIFY console command) is not defined as a destination IP address in the SNALINK LU6.2 configuration data set. The command is ignored.

**System action**
Processing continues.

**Operator response**
Enter the command using a valid IP address.

**System programmer response**
No action is needed.

**Module**
LU62MDFY
**Procedure name**
TRACE

**EZA6095W   RESTART: No connections to start**

**Explanation**
A RESTART subcommand, with a range specification of INIT, was entered from an operator console (using the MODIFY console command), but there are no destinations defined with the INIT option in the configuration data set. The command is ignored.

**System action**
Processing continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
LU62MDFY

**Procedure name**
RESTART

**EZA6114E   LU62CFG: Line number Col column: Invalid Statement Type**

**Explanation**
An incorrect statement type was encountered in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG. The error was detected at the indicated line in the indicated column.

**System action**
The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

**Operator response**
No action is needed.

**System programmer response**
Remove or correct the line in error, and restart the SNALINK LU6.2 address space.

**Module**
LU62INIT

**Procedure name**
RLCFG#P1

**EZA6115E   LU62CFG: Line number Col column: VTAM statement - Application Id expected**
Explanation
The application ID was omitted from a VTAM statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG. The error was detected at the indicated line in the indicated column.

System action
The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response
No action is needed.

System programmer response
Correct the line in error, and restart the SNALINK LU6.2 address space.

Module
LU62INIT

Procedure name
RLCFG#P1

EZA6116E    LU62CFG: Line number Col column: VTAM statement - Invalid format for Application Id

Explanation
The application ID contained in a VTAM statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG is longer than 8 characters. The error was detected at the indicated line in the indicated column.

System action
The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response
No action is needed.

System programmer response
Correct the line in error, and restart the SNALINK LU6.2 address space.

Module
LU62INIT

Procedure name
RLCFG#P1

EZA6117E    LU62CFG: Line number Col column: VTAM statement - Invalid format for Password

Explanation
The password contained in a VTAM statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG is longer than 8 characters. The error was detected at the indicated line in the indicated column.
System action
The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response
No action is needed.

System programmer response
Correct the line in error, and restart the SNALINK LU6.2 address space.

Module
LU62INIT

Procedure name
RLCFG#P1

EZA6118E  LU62CFG: Line number Col column: LINK statement - TCP/IP Link Name expected

Explanation
The TCPIP link name field of a LINK statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG is missing. The error was detected at the indicated line in the indicated column.

System action
The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response
No action is needed.

System programmer response
Correct the line in error, and restart the SNALINK LU6.2 address space.

Module
LU62INIT

Procedure name
RLCFG#P2

EZA6119E  LU62CFG: Line number Col column: LINK statement - Invalid TCP/IP Link Name

Explanation
The TCPIP link name contained in a LINK statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG is longer than 8 characters. The error was detected at the indicated line in the indicated column.

System action
The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response
No action is needed.
System programmer response
Correct the line in error, and restart the SNALINK LU6.2 address space.

Module
LU62INIT

Procedure name
RLCFG#P2

EZA6120E  LU62CFG: Line number Col column: LINK statement - Link Name already defined

Explanation
The TCP/IP link name field in a LINK statement in the SNALINK LU6.2 configuration data set has already been defined in a previous LINK statement. The error was detected at the indicated line in the indicated column.

System action
The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response
No action is needed.

System programmer response
Correct the line in error, and restart the SNALINK LU6.2 address space.

Module
LU62INIT

Procedure name
RLCFG#P2

EZA6121E  LU62CFG: Line number Col column: LINK statement - Log Mode Table Name expected

Explanation
The Log Mode Table field of a LINK statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG is missing. The error was detected at the indicated line in the indicated column.

System action
The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response
No action is needed.

System programmer response
Correct the line in error, and restart the SNALINK LU6.2 address space.

Module
LU62INIT
Procedure name
RLCFG#P2

**EZA6122E**  LU62CFG: Line *number* Col *column*: LINK statement - Invalid Log Mode Table Name

**Explanation**
The Log Mode Table name contained in a LINK statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG is longer than 8 characters. The error was detected at the indicated line in the indicated column.

**System action**
The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

**Operator response**
No action is needed.

**System programmer response**
Correct the line in error, and restart the SNALINK LU6.2 address space.

**Module**
LU62INIT

**Procedure name**
RLCFG#P2

**EZA6123E**  LU62CFG: Line *number* Col *column*: LINK statement - Invalid Idle Timeout value

**Explanation**
The Idle Timeout value contained in a LINK statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG is not a valid integer in the range 0 to $2^{31}-1$. The error was detected at the indicated line in the indicated column.

**System action**
The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

**Operator response**
No action is needed.

**System programmer response**
Correct the line in error, and restart the SNALINK LU6.2 address space.

**Module**
LU62INIT

**Procedure name**
RLCFG#P2

**EZA6124E**  LU62CFG: Line *number* Col *column*: DEST statement - Destination IP Address expected

856  z/OS Communications Server: IP Messages: Volume 1 (EZA)
Explanation
The Destination IP address field of a DEST statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG is missing. The error was detected at the indicated line in the indicated column.

System action
The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response
No action is needed.

System programmer response
Correct the line in error, and restart the SNALINK LU6.2 address space.

Module
LU62INIT

Procedure name
RLCFG#P2

EZA6125E  LU62CFG: Line number Col column: DEST statement - Invalid format for a fully qualified IP address

Explanation
The Destination IP address field of a DEST statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG is not in the required format. The IP address should be in the correct dotted-decimal format for a network node (for example, 192.9.207.100). The error was detected at the indicated line of the indicated column.

System action
The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response
No action is needed.

System programmer response
Correct the line in error, and restart the SNALINK LU6.2 address space.

Module
LU62INIT

Procedure name
RLCFG#P2

EZA6126E  LU62CFG: Line number Col column: DEST statement - Duplicate IP address detected

Explanation
The Destination IP address field of a DEST statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG has already been defined in a previous DEST statement. The error was detected at the indicated line in the indicated column.
System action
The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response
No action is needed.

System programmer response
Correct or remove the line in error, and restart the SNALINK LU6.2 address space.

Module
LU62INIT

Procedure name
RLCFG#P2

EZA6127E   LU62CFG: Line number Col column: DEST statement - Send LU Name expected

Explanation
The Send LU Name field of a DEST statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG is missing. The error was detected at the indicated line in the indicated column.

System action
The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response
No action is needed.

System programmer response
Correct the line in error, and restart the SNALINK LU6.2 address space.

Module
LU62INIT

Procedure name
RLCFG#P2

EZA6128E   LU62CFG: Line number Col column: DEST statement - Invalid Send LU Name

Explanation
The Send LU Name field of a DEST statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG is longer than 8 characters. The error was detected at the indicated line in the indicated column.

System action
The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response
No action is needed.
**System programmer response**
Correct the line in error, and restart the SNALINK LU6.2 address space.

**Module**
LU62INIT

**Procedure name**
RLCFG#P2

**EZA6129E**  LU62CFG: Line number Col column: DEST statement - Receive LU Name or ‘=’ expected

**Explanation**
The Receive LU Name field of a DEST statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG is missing. The error was detected at the indicated line in the indicated column.

**System action**
The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

**Operator response**
No action is needed.

**System programmer response**
Correct the line in error, and restart the SNALINK LU6.2 address space.

**Module**
LU62INIT

**Procedure name**
RLCFG#P2

**EZA6130E**  LU62CFG: Line number Col column: DEST statement - Invalid Receive LU Name

**Explanation**
The Receive LU Name field of a DEST statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG is longer than 8 characters. The error was detected at the indicated line in the indicated column.

**System action**
The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

**Operator response**
No action is needed.

**System programmer response**
Correct the line in error, and restart the SNALINK LU6.2 address space.

**Module**
LU62INIT
Procedure name
RLCFG#P2

EZA6131E LU62CFG: Line number Col column: DEST statement - Duplicate LU Name Detected

Explanation
The Send or Receive LU Name field of a DEST statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG has already been defined on a previous DEST statement. The error was detected at the indicated line in the indicated column.

System action
The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response
No action is needed.

System programmer response
Correct the line in error, and restart the SNALINK LU6.2 address space.

Module
LU62INIT

Procedure name
RLCFG#P2

EZA6132E LU62CFG: Line number Col column: DEST statement - LU Name cannot equal the Application Id on the VTAM statement

Explanation
The Send or Receive LU Name field of a DEST statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG is the same as that defined on the VTAM statement. The error was detected at the indicated line in the indicated column.

System action
The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response
No action is needed.

System programmer response
Correct the line in error, and restart the SNALINK LU6.2 address space.

Module
LU62INIT

Procedure name
RLCFG#P2

EZA6133E LU62CFG: Line number Col column: DEST statement - Invalid Connection Start Type
The Connection Start Type field of a DEST statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG contains an incorrect value. The Connection Start Type value should be either DATA, INIT, or blank. The error was detected at the indicated line in the indicated column.

System action
The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response
No action is needed.

System programmer response
Correct the line in error, and restart the SNALINK LU6.2 address space.

Module
LU62INIT

Procedure name
RLCFG#P2

Explanation
The Maximum Packet Size field of a BUFFERS statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG is missing. The error was detected at the indicated line in the indicated column.

System action
The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response
No action is needed.

System programmer response
Correct the line in error, and restart the SNALINK LU6.2 address space.

Module
LU62INIT

Procedure name
RLCFG#P1

Explanation
The Maximum Packet Size value contained in a BUFFERS statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG is not a valid integer in the range 20 - 32758. The error was detected at the indicated line of the indicated column.
**System action**
The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

**Operator response**
No action is needed.

**System programmer response**
Correct the line in error, and restart the SNALINK LU6.2 address space.

**Module**
LU62INIT

**Procedure name**
RLCFG#P1

| EZA6136E | LU62CFG: Line number Col column: BUFFERS statement - Invalid number of Additional Send Buffers |

**Explanation**
The Additional Send Buffers value contained in a BUFFERS statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG is not a valid integer in the range 0 to $2^{31}$-1. The error was detected at the indicated line in the indicated column.

**System action**
The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

**Operator response**
No action is needed.

**System programmer response**
Correct the line in error, and restart the SNALINK LU6.2 address space.

**Module**
LU62INIT

**Procedure name**
RLCFG#P1

| EZA6137E | LU62CFG: Line number Col column: BUFFERS statement - Invalid Send Queue Limit value |

**Explanation**
The Send Queue Limit value contained in a BUFFERS statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG is not a valid integer in the range 0 to $2^{31}$-1. The error was detected at the indicated line in the indicated column.

**System action**
The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.
Operator response
No action is needed.

System programmer response
Correct the line in error, and restart the SNALINK LU6.2 address space.

Module
LU62INIT

Procedure name
RLCFG#P1

EZA6138E  LU62CFG: Line number: TRACE statement - ON/OFF/DETAIL or ALL/IP expected after TRACE

Explanation
The syntax of a TRACE statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG is incorrect. The error was detected at the indicated line.

System action
The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response
No action is needed.

System programmer response
Correct the line in error, and restart the SNALINK LU6.2 address space.

Module
LU62INIT

Procedure name
RLCFG#P2

EZA6139E  LU62CFG: Line number: TRACE statement - ALL/IP expected after ON/OFF

Explanation
The syntax of a TRACE statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG is incorrect. The error was detected at the indicated line.

System action
The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response
No action is needed.

System programmer response
Correct the line in error, and restart the SNALINK LU6.2 address space.
Module
LU62INIT

Procedure name
RLCFG#P2

EZA6140E  LU62CFG: Line number: TRACE statement - ‘=’ expected after IP

Explanation
The syntax of a TRACE statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG is incorrect. The error was detected at the indicated line.

System action
The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response
No action is needed.

System programmer response
Correct the line in error, and restart the SNALINK LU6.2 address space.

Module
LU62INIT

Procedure name
RLCFG#P2

EZA6141E  LU62CFG: Line number: TRACE statement - IP address expected after ‘=’

Explanation
The syntax of a TRACE statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG is incorrect. The error was detected at the indicated line.

System action
The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response
No action is needed.

System programmer response
Correct the line in error, and restart the SNALINK LU6.2 address space.

Module
LU62INIT

Procedure name
RLCFG#P2

EZA6142E  LU62CFG: Line number: TRACE statement - Invalid format for a fully qualified IP address

864  z/OS Communications Server: IP Messages: Volume 1 (EZA)
Explanation
The IP address field of a TRACE statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG is not in the required format. The IP address should be in the correct dotted-decimal format for a network node (for example, 192.9.207.100). The error was detected at the indicated line.

System action
The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response
No action is needed.

System programmer response
Correct the line in error, and restart the SNALINK LU6.2 address space.

Module
LU62INIT

Procedure name
RLCFG#P2

EZA6143E  LU62CFG: Line number: TRACE statement - IP address not defined

Explanation
The IP address specified in a TRACE statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG was not previously defined in a DEST statement. The error was detected at the indicated line.

System action
The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response
No action is needed.

System programmer response
Correct the line in error, and restart the SNALINK LU6.2 address space.

Module
LU62INIT

Procedure name
RLCFG#P2

EZA6144E  LU62CFG: Line number: TRACE statement - Extraneous trailing data on line

Explanation
Extra trailing data was found on a line containing a TRACE statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG. The error was detected at the indicated line.
**System action**
The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

**Operator response**
No action is needed.

**System programmer response**
Correct the line in error, and restart the SNALINK LU6.2 address space.

**Module**
LU62INIT

**Procedure name**
RLCFG#P2

---

**EZA6145E LU62CFG: Line number: Only one VTAM statement may be specified**

**Explanation**
More than one VTAM statement was found in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG. The error was detected at the indicated line.

**System action**
The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

**Operator response**
No action is needed.

**System programmer response**
Remove one of the VTAM statements, and restart the SNALINK LU6.2 address space.

**Module**
LU62INIT

**Procedure name**
RLCFG#P1

---

**EZA6146E LU62CFG: VTAM statement missing**

**Explanation**
A VTAM statement was not found in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG.

**System action**
The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

**Operator response**
No action is needed.
**System programmer response**
Add a VTAM statement to the configuration data set, and restart the SNALINK LU6.2 address space.

**Module**
LU62INIT

**Procedure name**
RLCFG#P1

**EZA6147E**  LU62CFG: Line number: Only one BUFFERS statement may be specified

**Explanation**
More than one BUFFERS statement was found in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG. The error was detected at the indicated line.

**System action**
The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

**Operator response**
No action is needed.

**System programmer response**
Remove one of the BUFFERS statements, and restart the SNALINK LU6.2 address space.

**Module**
LU62INIT

**Procedure name**
RLCFG#P1

**EZA6148E**  LU62CFG: BUFFERS statement missing

**Explanation**
A BUFFERS statement was not found in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG.

**System action**
The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

**Operator response**
No action is needed.

**System programmer response**
Add a BUFFERS statement to the configuration data set, and restart the SNALINK LU6.2 address space.

**Module**
LU62INIT
**EZA6149E**  LU62CFG: No LINK statements defined

**Explanation**
No LINK statements were found in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG.

**System action**
The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

**Operator response**
No action is needed.

**System programmer response**
Add a LINK statement for each IUCV connection required between the SNALINK LU6.2 address space and the TCPIP address space, and restart the SNALINK LU6.2 address space.

Each of these connections should also be defined in the hlq.PROFILE.TCPIP data set using DEVICE and LINK statements. If DEVICE and LINK statements are added to the hlq.PROFILE.TCPIP data set, restart the TCPIP address space.

**Module**
LU62INIT

**EZA6150E**  LU62CFG: No DEST statements defined

**Explanation**
No DEST statements were found in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG.

**System action**
The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

**Operator response**
No action is needed.

**System programmer response**
Add a DEST statement for each destination IP address in the network directly connected to the SNALINK LU6.2 address space.

**Module**
LU62INIT

**EZA6151E**  LU62CFG: Line number: No DEST statements defined for previous LINK statement
**Explanation**
No DEST statements were found for the previous LINK statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG. The error was detected at the indicated line.

**System action**
The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

**Operator response**
No action is needed.

**System programmer response**
Either add a DEST statement following the previous LINK statement, or delete the previous LINK statement; then restart the SNALINK LU6.2 address space.

**Module**
LU62INIT

**Procedure name**
RLCFG#P1

**EZA6152E**  LU62CFG: Line *number*: VTAM statement must appear before first LINK statement

**Explanation**
No VTAM statement was found before the first LINK statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG. The error was detected at the indicated line.

**System action**
The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

**Operator response**
No action is needed.

**System programmer response**
Correct the configuration data set, and restart the SNALINK LU6.2 address space.

**Module**
LU62INIT

**Procedure name**
RLCFG#P1

**EZA6153E**  LU62CFG: Line *number*: A DEST statement can only appear after a LINK statement

**Explanation**
No LINK statement was found before the first DEST statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG. The error was detected at the indicated line.
System action
The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response
No action is needed.

System programmer response
Correct the configuration data set, and restart the SNALINK LU6.2 address space.

Module
LU62INIT

Procedure name
RLCFG#P1

EZA6154E LU62CFG: No DEST statements defined for last LINK statement

Explanation
No DEST statements were found for the last LINK statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG.

System action
The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response
No action is needed.

System programmer response
Either add a DEST statement following the last LINK statement or delete the last LINK statement; then restart the SNALINK LU6.2 address space.

Module
LU62INIT

Procedure name
RLCFG#P1

EZA6155E LU62CFG: Line number Col column: Extraneous trailing data on line

Explanation
Extra trailing data was found on a line following a statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG. The error was detected at the indicated line in the indicated column.

System action
The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response
No action is needed.
System programmer response
Correct the line in error, and restart the SNALINK LU6.2 address space.

Module
LU62INIT

Procedure name
RLCFG#P1, RLCFG#P2

EZA6170W Unable to setup connection entry.

Explanation
An error occurred during the creation of a Connection Table entry for a new connection. The cause is either insufficient storage available to create the buffers associated with the entry, or a program logic error. Preceding messages in the SYSPRINT data set indicate the exact nature of the error.

System action
Processing continues; the connection attempt is abnormally ended.

Operator response
No action is needed.

System programmer response
If preceding messages indicate insufficient storage, increase the REGION size parameter for the SNALINK LU6.2 address space, and restart the address space.

Module
LU62VTAM

Procedure name
ALOCCONN

EZA6171W Unable to start connection for address; connection entry setup failed

Explanation
This message is output on the console when a connection establishment that was initiated using the MODIFY command has been unsuccessful because of an error in creating the corresponding Connection Table entry. This error can occur when either there is insufficient storage available to create the buffers associated with the entry or a program logic error has occurred; preceding messages in the SYSPRINT data set indicate the exact nature of the error.

System action
Processing continues; the connection attempt is abnormally ended.

Operator response
No action is needed.
**System programmer response**

If preceding messages indicate insufficient storage, increase the REGION size parameter for the SNALINK LU6.2 address space, and restart the address space.

**Module**

LU62VTAM

**Procedure name**

MAKECONN

---

**EZA6172E  Sequential search length too large length**

**Explanation**

The indicated search field length passed to the sequential search routine was longer than 255.

**System action**

Processing continues as though the required entry was not found. Depending on the type of entry being located, this can lead to subsequent errors.

**Operator response**

No action is needed.

**System programmer response**

Probable program logic error. Contact the IBM Software Support Center.

**Module**

LU62MAIN

**Procedure name**

SEQSERCH

---

**EZA6173E  Binary search length too large length**

**Explanation**

The indicated search field length passed to the binary search routine was longer than 255.

**System action**

Processing continues as though the required entry was not found. Depending on the type of entry being located, this can lead to subsequent errors.

**Operator response**

No action is needed.

**System programmer response**

Probable program logic error. Contact the IBM Software Support Center.
**Procedure name**
BINSEARCH

**EZA6174W** Unable to setup DLC table entry for *link*; entry already active for path

**Explanation**
An attempt to establish a DLC connection for the indicated TCPIP link has been unsuccessful because the corresponding DLC table entry is already marked as active.

**System action**
Processing continues; the DLC connection attempt is abnormally ended.

**Operator response**
No action is needed.

**System programmer response**
Probable program logic error. Contact the IBM Software Support Center. The data structures can be reinitialized by restarting the SNALINK LU6.2 address space.

**Module**
LU62IUCV

**Procedure name**
SETUPIUC

**EZA6175E** Unable to setup DLC table entry; free memory exhausted, RC=rc

**Explanation**
An attempt to establish a DLC connection has been unsuccessful because of an error in a GETMAIN macro invocation.

**System action**
Processing continues; the DLC connection attempt is abnormally ended.

**Operator response**
No action is needed.

**System programmer response**
Check the indicated GETMAIN return code value to determine the cause of the error. If insufficient storage caused the error, increase the REGION size parameter for the SNALINK LU6.2 address space, and restart the address space.

**Module**
LU62IUCV

**Procedure name**
SETUPIUC

**EZA6176W** Unable to clear DLC table entry; already inactive for path
**Explanation**
An attempt to close a DLC connection for the indicated TCPIP link has been unsuccessful because the corresponding DLC table entry is already marked as inactive.

**System action**
Processing continues; the DLC connection is assumed to be correctly closed.

**Operator response**
No action is needed.

**System programmer response**
Contact the IBM Software Support Center.

**Module**
LU62IUCV

**Procedure name**
CLEARIUC

---

**EZA6177E**  Unable to clear DLC table entry for path; can't free memory RC=rc

**Explanation**
An attempt to close a DLC connection has been unsuccessful because of an error in a FREEMAIN macro invocation. The indicated return code is the return code for the unsuccessful FREEMAIN macro invocation.

**System action**
Processing continues; the DLC connection is assumed to be correctly closed.

**Operator response**
No action is needed.

**System programmer response**
Probable program logic error. Contact the IBM Software Support Center.

**Module**
LU62IUCV

**Procedure name**
CLEARIUC

---

**EZA6178W**  The connection entry passed to SETUPCON is already in use

**Explanation**
An attempt to establish a connection with a destination node has been unsuccessful because of the corresponding Connection Table entry already being marked as active.

**System action**
Processing continues; the connection establishment attempt is abnormally ended.
Operator response
No action is needed.

System programmer response
Probable program logic error. Contact the IBM Software Support Center.

Module
LU62VTAM

Procedure name
SETUPCON

**EZA6179E**  Getmain error RC= rc

**Explanation**
An attempt to establish a connection with a destination node has been unsuccessful because of an error in a GETMAIN macro invocation. The indicated return code is the return code value from the unsuccessful GETMAIN macro invocation.

**System action**
Processing continues; the connection establishment attempt is abnormally ended.

Operator response
No action is needed.

System programmer response
Check the indicated GETMAIN return code value to determine the cause of the error. If insufficient storage caused the error, increase the REGION size parameter for the SNALINK LU6.2 address space, and restart the address space.

Module
LU62VTAM

Procedure name
SETUPCON

**EZA6180E**  GENCB error RC= rc

**Explanation**
An attempt to establish a connection with a destination node has been unsuccessful because the VTAM RPL could not be generated in the Connection Table entry. The indicated return code is the return code value from the unsuccessful GENCB macro invocation.

**System action**
Processing continues; the connection establishment attempt is abnormally ended.

Operator response
No action is needed.
System programmer response
Check the indicated GENCB return code value to determine the cause of the error, and correct the problem if possible.

Module
LU62VTAM

Procedure name
SETUPCON

EZA6181W The connection entry passed to CLEARCON is already inactive

Explanation
The Connection Table entry address, passed to the routine responsible for clearing the entry and freeing the memory used by associated buffers, is already marked as inactive.

System action
Processing continues; the connection is assumed to be correctly closed.

Operator response
No action is needed.

System programmer response
Probable program logic error. Contact the IBM Software Support Center.

Module
LU62VTAM

Procedure name
CLEARCON

EZA6182E Freemain error; RC=rc

Explanation
An attempt to close a connection with a destination node has been unsuccessful because of an error in a FREEMAIN macro invocation. The indicated return code is the return code for the unsuccessful FREEMAIN macro invocation.

System action
Processing continues; the connection is assumed to be correctly closed.

Operator response
No action is needed.

System programmer response
Probable program logic error. Contact the IBM Software Support Center.
**EZA6183E** The IP address address from the connection table is undefined

**Explanation**
An attempt to close a connection with a destination node has been unsuccessful because of a probable program logic error or internal data structure corruption.

**System action**
Processing continues; the connection is assumed to be correctly closed.

**Operator response**
No action is needed.

**System programmer response**
Probable program logic error. Contact the IBM Software Support Center.

---

**EZA6184E** Invalid connection entry address passed to ADD INACTIVITY

**Explanation**
An error occurred while adding a connection to the timeout inactivity list; the connection entry address did not reference a valid Connection Table entry.

**System action**
The SNALINK LU6.2 address space issues a user abend immediately.

**Operator response**
No action is needed.

**System programmer response**
Probable program logic error. Contact the IBM Software Support Center.

---

**EZA6185E** Invalid connection entry address passed to SUB INACTIVITY
Explanation
An error occurred while removing a connection from the timeout inactivity list; the connection entry address did not reference a valid Connection Table entry.

System action
The SNALINK LU6.2 address space issues a user abend immediately.

Operator response
No action is needed.

System programmer response
Probable program logic error. Contact the IBM Software Support Center.

Module
LU62MAIN

Procedure name
SUBINACT

EZA6186E  The inactivity queue has lost the address connection

Explanation
The Connection Table entry for the indicated IP address has been lost from the timeout inactivity list.

System action
The SNALINK LU6.2 address space issues a user abend immediately.

Operator response
No action is needed.

System programmer response
Contact the IBM Software Support Center.

Module
LU62MAIN

Procedure name
SUBINACT

EZA6187E  Unable to match RPL address to send or receive for address

Explanation
The RPL address returned from VTAM for a conversation allocation request did not match either the send or receive RPL address.

System action
The SNALINK LU6.2 address space issues a user abend immediately.
Operator response
No action is needed.

System programmer response
Probable program logic error or data corruption in either VTAM or SNALINK LU6.2. Contact the IBM Software Support Center.

Module
LU62VTAM

Procedure name
VTAMALOC

EZA6188W The connection entry passed to KILLCONN is already inactive

Explanation
An attempt to close a connection with a destination node has been unsuccessful because of the corresponding Connection Table entry already being marked as inactive.

System action
Processing continues; the connection is assumed to be correctly closed.

Operator response
No action is needed.

System programmer response
Probable program logic error. Contact the IBM Software Support Center.

Module
LU62VTAM

Procedure name
KILLCONN

EZA6189W Unable to honor connection request for address; connection entry setup failed

Explanation
An error was encountered during the creation of a Connection Table entry for a new connection that was initiated from the destination node associated with the indicated IP address. This error can occur when either there is not enough storage to create the buffers associated with the entry or a program logic error has occurred. The preceding messages in the SYSPRINT data set indicate the exact nature of the error.

System action
Processing continues; the connection attempt is abnormally ended.

Operator response
No action is needed.
System programmer response
If preceding messages indicate insufficient storage, increase the REGION size parameter for the SNALINK LU6.2 address space, and restart the address space.

Module
LU62VTAM

Procedure name
VTAMATTN

EZA6190W  Program Parameters Ignored

Explanation
Program parameters were passed to the SNALINK LU6.2 address space, but no parameters are processed by the SNALINK LU6.2 address space. The parameters are ignored.

System action
Processing continues.

Operator response
No action is needed.

System programmer response
Remove the program parameters from the invocation JCL.

Module
LU62INIT

Procedure name
L62ENTRY

EZA6192W  CIB for START Command not freed - MODIFY Commands may not be available

Explanation
An error occurred during the initialization of MODIFY command handling. MODIFY commands might not be available.

System action
Processing continues.

Operator response
No action is needed.

System programmer response
Probable program error. Contact the IBM Software Support Center.

Module
LU62MAIN
**Procedure name**
MAINPROC

**EZA6193W  Unrecognized Console Command - Command Ignored**

**Explanation**
An unrecognized console command was passed to the SNALINK LU6.2 address space; only START, MODIFY, STOP, and PURGE commands are recognized. The command is ignored.

**System action**
Processing continues.

**Operator response**
Enter the required command using the correct format.

**System programmer response**
No action is needed.

**Module**
LU62MAIN

**Procedure name**
MAINPROC

**EZA6204W  Datagram for address discarded, queue limit exceeded**

**Explanation**
The length of the send queue, which holds IP datagrams waiting to be passed to VTAM, has exceeded the maximum length specified in the BUFFERS statement in the SNALINK LU6.2 configuration data set. The indicated address is the destination IP address of the datagram triggering this message. The datagram is discarded.

**System action**
Processing continues.

**Operator response**
No action is needed.

**System programmer response**
Consider increasing the send queue limit or maximum packet size value on the BUFFERS statement. If possible, tune the VTAM connection with the destination node to provide better throughput.

**Module**
LU62IUCV

**Procedure name**
IUCVPMES

**EZA6205W  Datagram for address discarded, no free memory for connection entry**
**Explanation**
An IP datagram for the indicated IP address has initiated a connection attempt with the corresponding destination node, but the connection attempt was unsuccessful because of insufficient available storage to allocate the required buffers. The datagram is discarded.

**System action**
Processing continues; the connection attempt is abnormally ended.

**Operator response**
No action is needed.

**System programmer response**
Increase the value of the REGION parameter for the SNALINK LU6.2 address space, and restart the address space.

---

**Module**
LU62IUCV

**Procedure name**
IUCVPMES

---

**EZA6206W**   Datagram for address discarded, VTAM send buffer pool exhausted

**Explanation**
The buffer pool used to hold IP datagrams waiting to be passed to VTAM has been exhausted. The datagram is discarded.

**System action**
Processing continues.

**Operator response**
No action is needed.

**System programmer response**
Consider increasing the number of additional send buffers and maximum packet size values in the BUFFERS statement. If possible, tune the VTAM connections to provide better throughput.

---

**Module**
LU62IUCV

**Procedure name**
IUCVPMES

---

**EZA6207W**   VTAM send queue limit exceeded for address

**Explanation**
The length of the send queue, which holds IP datagrams waiting to be passed to VTAM, has exceeded the maximum length specified in the BUFFERS statement in the SNALINK LU6.2 configuration data set. The
indicated address is the destination IP address of the datagram triggering this message. Message EZA6204W is also written to the SYSPRINT data set, and the datagram is discarded.

**System action**
Processing continues.

**Operator response**
No action is needed.

**System programmer response**
See message EZA6204W.

**Module**
LU62VTAM

**Procedure name**
ADDVTSND

**EZA6208W  Datagram for address discarded, link requested, link defined**

**Explanation**
An IP datagram for the indicated IP address was received from TCPIP using the indicated link. However, in the SNALINK LU6.2 configuration data set, the first indicated link has been defined to use the second indicated link. The datagram is discarded.

**System action**
Processing continues.

**Operator response**
No action is needed.

**System programmer response**
Correct the hlq.PROFILE.TCPIP data set or the SNALINK LU6.2 configuration data set, and restart the address spaces.

**Module**
LU62IUCV

**Procedure name**
IUCVPMES

**EZA6209W  Datagram for address discarded, link link closed**

**Explanation**
An IP datagram has been received from the indicated IP address, but the associated IUCV connection on which the datagram is to be passed to TCPIP is not currently open. TCPIP is responsible for initiating the establishment of IUCV connections and will try to establish the connections again every 30 seconds. The datagram is discarded.
System action
Processing continues.

Operator response
No action is needed.

System programmer response
Check that the TCPIP address space is active and that the IUCV connection to the SNALINK LU6.2 address space has been successfully started.

Module
LU62VTAM

Procedure name
VTAMRECV

EZA6210W Datagram for address discarded, IP address not defined

Explanation
An IP datagram with the indicated first-hop address was received from TCPIP (using IUCV), but the address is not defined in the SNALINK LU6.2 configuration data set. The datagram is discarded.

System action
Processing continues.

Operator response
No action is needed.

System programmer response
Correct the SNALINK LU6.2 configuration data set, and restart the address space.

Module
LU62IUCV

Procedure name
IUCVPMES

EZA6211W Message from link discarded, receive buffer too small

Explanation
A message sent by the TCPIP address space using IUCV is too large to be received into the IUCV receive buffer. The indicated link name is the TCPIP link name on which the message was sent. The datagrams in the message are discarded.

System action
Processing continues.
**Operator response**
No action is needed.

**System programmer response**
Probable program error. Contact the IBM Software Support Center.

**Module**
LU62IUCV

**Procedure name**
DOIURECV

**EZA6212W** Datagram for *address* discarded, Send datagram exceeded the MAX packet size

**Explanation**
An IP datagram received from TCPIP (using IUCV) is larger than the maximum packet size value defined in the BUFFERS statement in the SNALINK LU6.2 configuration data set. This maximum packet size value should be set to the same value as that defined for the corresponding link in the *hlq*.PROFILE.TCPIP data set. The datagram is discarded.

**System action**
Processing continues.

**Operator response**
No action is needed.

**System programmer response**
Correct the *hlq*.PROFILE.TCPIP data set or the SNALINK LU6.2 configuration data set, and restart the address spaces.

**Module**
LU62IUCV

**Procedure name**
IUCVPMES

**EZA6213W** Datagram from *address* discarded, Receive datagram exceeded the MAX packet size

**Explanation**
An IP datagram sent from a destination node (using VTAM) is larger than the maximum packet size value defined in the BUFFERS statement in the SNALINK LU6.2 configuration data set. This maximum packet size value should be set to the same value on all nodes in the network directly connected to the SNALINK LU6.2 address space. The datagram is received in sections and then discarded.

**System action**
Processing continues.

**Operator response**
No action is needed.
System programmer response
Check that the maximum packet size value is set to the same value on all nodes in the network directly connected to the SNALINK LU6.2 address space.

Module
LU62VTAM

Procedure name
VTAMRECV

EZA6219E   IUCV Initialization Failed, VMCF Subsystem not located

Explanation
While trying to determine the Program Call number for use by the IUCV interface, the JES Subsystem Communication Vector Table (SSCT) entry for VMCF could not be located.

System action
The SNALINK LU6.2 address space shuts down immediately.

Operator response
No action is needed.

System programmer response
Verify that the VMCF subsystem is active. See Step 3: Configure VMCF and TNF in z/OS Communications Server: IP Configuration Guide for more information about starting VMCF and TNF. Check for previous operator messages that might indicate why VMCF failed to initialize.

Module
LU62INIT

Procedure name
GETIPC

EZA6220S   Unable to start connection for address; no free connection entries

Explanation
An attempt to establish a connection with the destination node associated with the indicated IP address failed because there were no free Connection Table entries. This indicates a program logic error or internal data corruption has occurred because there should have been sufficient entries allocated during initialization of the address space.

System action
The SNALINK LU6.2 address space issues a user abend immediately.

Operator response
No action is needed.

System programmer response
Contact the IBM Software Support Center.
Module
LU62VTAM

Procedure name
ALOCCONN

EZA6221S   Invalid exit type found on VTAM event queue, Type= type

Explanation
The indicated exit type was found on the VTAM event queue. The valid exit types are SEND, RECV, ATTN, ALOC, and DALC.

System action
The SNALINK LU6.2 address space issues a user abend immediately.

Operator response
No action is needed.

System programmer response
Contact the IBM Software Support Center.

Module
LU62VTAM

Procedure name
PROCVTAM

EZA6222S   No connection entry found in RPL record

Explanation
All VTAM requests are made with the address of the relevant Connection Table entry in the word immediately preceding the RPL address defined to VTAM. This address has somehow been corrupted.

System action
The SNALINK LU6.2 address space issues a user abend immediately.

Operator response
No action is needed.

System programmer response
Contact the IBM Software Support Center.

Module
LU62VTAM

Procedure name
VTAMALOC, VTAMSEND, VTAMRECV, VTAMDALC

EZA6223S   Unmatched RPL address for address in DEALOC
Explanation
The RPL address returned from a VTAM deallocate request does not match either the Send or Receive RPL address, which indicates that the RPL has probably been corrupted.

System action
The SNALINK LU6.2 address space issues a user abend immediately.

Operator response
No action is needed.

System programmer response
Contact the IBM Software Support Center.

Module
LU62VTAM

Procedure name
VTAMDALC

EZA6224S VTAM send completed, but send queue empty for address

Explanation
The VTAM send queue was empty when it was expected to contain an entry, indicating that the queue has probably been corrupted.

System action
The SNALINK LU6.2 address space issues a user abend immediately.

Operator response
No action is needed.

System programmer response
Contact the IBM Software Support Center.

Module
LU62VTAM

Procedure name
VTAMSEND

EZA6225S ATTN Exit event type invalid. Type= type

Explanation
The indicated ATTN exit type was detected. The valid exit types are FMH5, CNOS, and LOSS.

System action
The SNALINK LU6.2 address space issues a user abend immediately.
**Operator response**
No action is needed.

**System programmer response**
Contact the IBM Software Support Center.

**Module**
LU62VTAM

**Procedure name**
VTAMATTN

**EZA6226S  Negative send queue count for address**

**Explanation**
A counter, which contains the number of entries in the VTAM send, contains a negative number, indicating a probable program logic error.

**System action**
The SNALINK LU6.2 address space issues a user abend immediately.

**Operator response**
No action is needed.

**System programmer response**
Contact the IBM Software Support Center.

**Module**
LU62VTAM

**Procedure name**
SUBVTSND

**EZA6227S  Bad RPL specified on command**

**Explanation**
The return codes from the indicated VTAM APPC command show that the RPL specified was not valid. Messages EZA6029E to EZA6032E are written to the SYSPRINT data set to provide further details of the error.

**System action**
The SNALINK LU6.2 address space issues a user abend.

**Operator response**
No action is needed.

**System programmer response**
Contact the IBM Software Support Center.
Module
LU62VTAM

Procedure name
ANALYZE

**EZA6228S**  Bad RPLX specified on *command*

**Explanation**
The return codes from the indicated VTAM APPC command show that the extended RPL specified was not valid. Messages EZA6029E to EZA6032E are written to the SYSPRINT data set to provide further details of the error.

**System action**
The SNALINK LU6.2 address space issues a user abend.

**Operator response**
No action is needed.

**System programmer response**
Contact the IBM Software Support Center.

---

Module
LU62VTAM

Procedure name
ANALYZE

**EZA6229S**  *command* received a policing error

**Explanation**
The return codes from the indicated VTAM APPC command indicate that a non-APPC command was issued on an APPC connection. Messages EZA6029E to EZA6032E are written to the SYSPRINT data set to provide further details of the error.

**System action**
The SNALINK LU6.2 address space issues a user abend.

**Operator response**
No action is needed.

**System programmer response**
Contact the IBM Software Support Center.
EZA6230S  Pending message buffer pool exhausted

**Explanation**
The free pool for the pending message queue has been exhausted. This should never happen because sufficient entries are allocated during initialization, and a maximum of one entry can be used by each connection. This is a probable program logic error. A dump is produced if the ddname SYSUDUMP has been defined.

**System action**
The SNALINK LU6.2 address space abnormally ends.

**Operator response**
No action is needed.

**System programmer response**
Contact the IBM Software Support Center.

**Module**
LU62VTAM

**Procedure name**
VTAMRECV

EZA6275I  SNMP query engine running and awaiting queries...

**Explanation**
The SNMP query engine is running and it is available to handle queries.

**System action**
The SNMP query engine continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
sqeserv

**Procedure name**
MAIN

EZA6276I  There are available_FD's Client connections possible

**Explanation**
The number of client connections possible is determined by subtracting the number of current connections from the maximum number of connections defined in the management information base (MIB).
System action
The SNMP query engine continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
sqeserv

Procedure name
MAIN

EZA6277S  more than trans_count transactions in a second

Explanation
The maximum number of transactions per second has been exceeded. This can be a sign that SQESERV is in a loop.

System action
The SNMP query engine exits.

Operator response
Tell the system programmer about the error.

System programmer response
Contact the IBM Software Support Center.

Module
sqeserv

Procedure name
await_queries

EZA6278I  await_queries : select

Explanation
The SQE server has attempted to issue a select function to determine if any queries were outstanding. Message EZA6279E is displayed.

System action
The SQE server ends.

Operator response
No action is needed.
**System programmer response**
No action is needed.

**Module**
SQESERV

**Procedure name**
await_queries

**EZA6279E**  select failed in await_queries

**Explanation**
The SQE server encountered an error issuing a select function call to determine if any queries were outstanding.

**System action**
The SQESERV module ends.

**Operator response**
Tell the system programmer about the error.

**System programmer response**

**Module**
SQESERV

**Procedure name**
await_queries

**EZA6280E**  accept_new_client : accept

**Explanation**
The SQE server encountered an error while trying to establish an accept for a TCP listen.

**System action**
SNMP query server continues processing.

**Operator response**
Tell the system programmer about the error.

**System programmer response**
Procedure name
accept_new_client

EZA6281E   mkNVlisten: socket

Explanation
The SQE server encountered an error while trying to establish a socket for a TCP listen.

System action
The SQESERV module ends.

Operator response
Tell the system programmer about the error.

System programmer response

Module
SQESERV

Procedure name
mkNVlisten

EZA6282E   mkNVlisten: bind

Explanation
The SQE server encountered an error while trying to establish a bind for a TCP listen.

System action
The SQESERV module ends.

Operator response
Tell the system programmer about the error.

System programmer response

Module
SQESERV

Procedure name
mkNVlisten

EZA6283E   mkNVlisten: socket(AF_IUCV)

Explanation
The SQE server encountered an error while trying to establish an IUCV socket for a TCP listen.
**System action**
The SQESERV module ends.

**Operator response**
Tell the system programmer about the error.

**System programmer response**

**Module**
SQESERV

**Procedure name**
mkNVlisten

---

**EZA6285E**  Can't make UDP port - can't send SNMP requests

**Explanation**
The SQE server could not make the SNMP UDP port.

**System action**
The SQESERV module ends.

**Operator response**
Tell the system programmer about the error.

**System programmer response**
This error message is preceded by a message indicating an error with either the socket or bind request.

**Module**
SQESERV

**Procedure name**
create_ports

---

**EZA6286W**  Can't make SNMP trap port - can't receive traps

**Explanation**
The SQE server cannot make the SNMP trap port because of an unsuccessful socket call or bind.

**System action**
The SQESERV module ends.

**Operator response**
Check that another SQESERV program is not already running. Only one SQESERV program can use the SNMP trap port. If this is the only SQESERV program attempting to run, contact the system programmer.
System programmer response
Check that the user is allowed to use the reserved port by making the appropriate PORT entries in the hlq.PROFILE.TCPIP data set.

Module
SQESERV

Procedure name
create_ports

EZA6287E  Can't do TCP listen - can't accept TCP clients

Explanation
The SQE server encountered an error attempting a TCP listen.

System action
The SQESERV module ends with exit code 1.

Operator response
Tell the system programmer about the error.

System programmer response

Module
SQESERV

Procedure name
create_ports

EZA6288E  Can't do IUCV listen - can't accept IUCV clients

Explanation
The SQE server encountered an error attempting an IUCV listen.

System action
The SQESERV module ends.

Operator response
Tell the system programmer about the error.

System programmer response
Procedure name
create_ports

EZA6289W  Can't make raw ICMP socket - can't do PING

Explanation
The SQE server encountered an error making the PING port. SNMP Ping requests are unsuccessful.

System action
Processing continues without the raw socket.

Operator response
Check that the user is permitted to use RAW sockets.

System programmer response
If you are running on a system with the RACF program installed, check that the SNMPQE user ID is authorized to the RACF. See the EZARACF sample shipped in SEZAINST for sample RACF definitions.

Restart SNMPQE with debug level 4 to get detailed information about the problem. See the information about specifying SNMPQE parameters in z/OS Communications Server: IP Configuration Reference for more information about starting SNMPQE with debug level 4.

Module
SQESERV

Procedure name
create_ports

EZA6290I  Accepted new client connection

Explanation
The SQE server was able to establish a new client connection.

System action
Processing continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
SQESERV

Procedure name
accept_new_client

EZA6292I  Received following NVquery packet.
**Explanation**
The SQE server was able to receive a packet. Following this message will be a hexadecimal display of the packet.

**System action**
Processing continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
SQESERV

**Procedure name**
getNVquery

**EZA6293I**  Terminated client connection.

**Explanation**
The SQE server has ended a client connection.

**System action**
The client connection is ended and the SNMP query engine continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
SQESERV

**Procedure name**
terminate_connection

**EZA6294E**  getSNMPresponse: recvfrom

**Explanation**
The SQE server was unable to receive a response from an SNMP query.

**System action**
Processing continues.
**Operator response**
Tell the system programmer about the error.

**System programmer response**
Verify that the SNMPD agent is available.

**Module**
SQESERV

**Procedure name**
getSNMPResponse

**EZA6295I**  Received following SNMP_response packet

**Explanation**
The SQE server was able to receive a response from an SNMP query. The hexadecimal display of the packet will follow.

**System action**
Processing continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
SQESERV

**Procedure name**
getSNMPResponse

**EZA6297E**  error code err_code : out of memory

**Explanation**
The SQE server was unable get enough storage.

**System action**
Processing continues.

**Operator response**
Tell the system programmer about the error.

**System programmer response**
Increase the region size and restart the SNMP query engine.
Module
SQESERV, SQEQUEUE, SQEPNV, SQEMKREQ

Procedure name
Various

**EZA6298E**  create_SNMP_TRAP_port : socket

**Explanation**
The SQE server was unable to establish a socket for an SNMP trap port.

**System action**
The SQESERV module ended.

**Operator response**
Tell the system programmer about the error.

**System programmer response**
Verify that the port for SNMPQE was defined correctly in the *hlq.PROFILE.DATA* data set. If the port was defined correctly see *z/OS Communications Server: IP Programmer's Guide and Reference* for information about socket errors.

Module
SQESERV

Procedure name
create_SNMP_trap_port

**EZA6299E**  create_SNMP_TRAP_port : bind

**Explanation**
The SQE server was unable to bind a socket for an SNMP trap port.

**System action**
The SQESERV module ended.

**Operator response**
Tell the system programmer about the error.

**System programmer response**
See *z/OS Communications Server: IP Programmer's Guide and Reference* for information about socket errors.

Module
SQESERV

Procedure name
create_SNMP_trap_port

**EZA6300I**  getSNMPtrap : recvform
**Explanation**  
The SQE server was unable to receive an SNMP trap packet.

**System action**  
Processing continues.

**Operator response**  
Tell the system programmer about the error.

**System programmer response**  

**Module**  
SQESERV

**Procedure name**  
getSNMPtrap

---

**EZA6301I**  
Received following SNMP_trap packet

**Explanation**  
The SQE server was able to receive a trap packet for the SNMP query server. The hexadecimal display of the packet will follow.

**System action**  
Processing continues.

**Operator response**  
No action is needed.

**System programmer response**  
No action is needed.

**Module**  
SQESERV

**Procedure name**  
getSNMPtrap

---

**EZA6303E**  
recvPING: recvfrom

**Explanation**  
The SQE server was unable to receive a SNMP ICMP packet.

**System action**  
Processing continues.
**Operator response**
Tell the system programmer about the error.

**System programmer response**

**Module**
SQESERV

**Procedure name**
create_SNMP_trap_port

---

**EZA6304E**  Error code err_code : received ICMP packet >= size bytes

**Explanation**
The SQE server was unable to receive an SNMP ICMP packet because the packet was too large. The largest packet size supported by the SQE server is 4096 bytes.

**System action**
Processing continues.

**Operator response**
Reissue the PING request with a smaller packet size.

**System programmer response**
No action is needed.

**Module**
SQESERV

**Procedure name**
getSNMPResponse

---

**EZA6305I**  dumping packet of size bytes

**Explanation**
The SQE server will print a packet as hexadecimal data.

**System action**
Processing continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.
Module
SQESERV

Procedure name
hex_dump

EZA6306W resolver not yet supported

Explanation
The SQE server found a Q_RESOLVER_RESPONSE request, which is not currently supported. The request is ignored.

System action
Processing continues with the next request.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
SQEQUEUE

Procedure name
queue_entry

EZA6307E queue_entry

Explanation
Either an SNMP, RESOLVER, PING, or an incorrect query was requested and was unsuccessful.

System action
Processing continues.

Operator response
Tell the system programmer about the error.

System programmer response
Determine the cause of the error by referring to the messages that follow.

Module
SQEQUEUE

Procedure name
queue_entry

EZA6308I sending SNMP request to host
Explanation
The SQE query engine is sending a request to the host specified.

System action
Processing continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
SQEQUEUE

Procedure name
send_SNMP_request

EZA6309W ret_response: cant find q_ptr.
EZA6310W queue= queue req_id= req_id minor_err= minor_err

Explanation
The SQE query engine has no more outstanding responses in the queue.

System action
Processing continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
SQEQUEUE

Procedure name
ret_response

EZA6311W fd fd not ready for writing for timeout seconds

Explanation
The SQE query engine timed out while trying to write a response to the connection.

System action
The connection is closed.
Operator response
Reestablish the connection.

System programmer response
Verify that the SNMPD client is available.

Module
SQEQUEUE

Procedure name
write_reply

EZA6312W  Dropping packet for client on fd=fd

Explanation
The SQE query engine could not write a response to the connection.

System action
Connection is closed.

Operator response
Contact the system programmer.

System programmer response
Determine if the agent is available, then reestablish the connection.

Module
SQEQUEUE

Procedure name
ret_response

EZA6313W  Ignored write_reply for unexpected fd fd

Explanation
The SQE query engine could not write a response to the connection.

System action
Connection is closed.

Operator response
Contact system programmer.

System programmer response
Determine if the agent is available, reestablish the connection.
Module
SQEQUEUE

Procedure name
ret_response

EZA6314E  error code err_code : unknown request type

Explanation
The SQE query engine received an unknown request type and could not respond.

System action
Processing continues.

Operator response
Tell the system programmer about the error.

System programmer response
Check the sending device and determine why it is sending incorrect request types.

Module
SQEMKREQ

Procedure name
SQEMKREQ

EZA6316E  mkPINGport : socket

Explanation
The SQE Query engine PING routine could not establish a socket connection for a PING request.

System action
SQEPING exits.

Operator response
Tell the system programmer about the error.

System programmer response
See z/OS Communications Server: IP Programmer's Guide and Reference for more information about socket
errors.

Usually this problem is caused by an authorization failure. See the information about the configure the SNMP
query engine in z/OS Communications Server: IP Configuration Guide for more information about the required
authorization.
**Procedure name**
mkPINGport

**EZA6317E**  
**send_ping_packet: sendto**

**Explanation**
The SQE Query engine PING routine was unable to send a PING packet.

**System action**
SQEPING exits.

**Operator response**
Tell the system programmer about the error.

**System programmer response**
Verify that the specified host is connected. Verify that the PING was requested correctly.

**Module**
SQEPING

**Procedure name**
send_PING_packet

**EZA6319W**  
**Objectid to long: obj_id**

**Explanation**
The object identifier was too long.

**System action**
MIB@DESC exits.

**Operator response**
Tell the system programmer about the error.

**System programmer response**
Correct the object identifier and resubmit. See z/OS Communications Server: IP Programmer's Guide and Reference for more information about the correct format of the object identifier in Management Information Base (MIB) Objects.

**Module**
MIB@DESC

**Procedure name**
MIB@DESC

**EZA6320W**  
**Cannot open MIB description file: data_set**

**Explanation**
SNMP was unable to open the indicated MIB description data set.
System action
MIB@DESC returns control to the calling application.

Operator response
Make sure that the indicated MIB description data set is loaded and in storage accessible to the host.

System programmer response
No action is needed.

Module
MIB@DESC

Procedure name
MIB@DESC

EZA6321E MIB_descript_file

Explanation
This message is displayed with message EZA6320W to indicate the current MIB file.

System action
MIB@DESC returns control to the calling application.

Operator response
Respond as indicated by message EZA6320W.

System programmer response
Respond as indicated by message EZA6320W.

Module
MIB@DESC

Procedure name
MIB@DESC

EZA6322I Using MIB_descript_file as MIB description file

Explanation
The MIB description file was opened successfully.

System action
Processing continues.

Operator response
No action is needed.
**System programmer response**
No action is needed.

**Module**
MIB@DESC

**Procedure name**
MIB@DESC

**EZA6324E  unknown MIB type: type**

**Explanation**
The SQE server found an unknown type field in the MIB description file.

**System action**
Processing continues.

**Operator response**
Tell the system programmer about the error.

**System programmer response**
Correct the MIB description file, the hlq.MIB@DESC.DATA data set, and restart SQESERV.

**Module**
SNMPSEND

**Procedure name**
read_mib_desc_tbl

**EZA6325W  out of memory in read_mibdesc_tbl**

**Explanation**
MIB@DESC was unable to get enough storage to process the MIB description file.

**System action**
Processing continues.

**Operator response**
Tell system programmer about the error.

**System programmer response**
Increase the region size for the SNMPD program.

**Module**
MIB@DESC
**Procedure name**
MIB@DESC

---

**EZA6326E  create_SNMP_port: socket error**

**Explanation**
A socket() call was unsuccessful in attempting to create an SNMP port. The port could not be created.

**System action**
The SQESERV module ends.

**Operator response**
Tell the system programmer about the error.

**System programmer response**
See Appendix A, “Additional information about remote procedure call (RPC) messages,” on page 1245 for more information about tcperror return codes.

**Module**
SNMPSEND

---

**Procedure name**
create_SNMP_port

---

**EZA6327E  create_SNMP_port: bind error**

**Explanation**
A bind() call was unsuccessful in attempting to create an SNMP port. The port could not be created.

**System action**
The SQESERV module ends.

**Operator response**
Tell the system programmer about the error.

**System programmer response**
See Appendix A, “Additional information about remote procedure call (RPC) messages,” on page 1245 for more information about tcperror return codes.

**Module**
SNMPSEND

---

**Procedure name**
create_SNMP_port

---

**EZA6328W  parse_SNMP_packet: cannot parse packet (ps_alloc)**
Explanation
The SQE server could not parse an SNMP request because sufficient storage could not be allocated. The request is ignored.

System action
Processing continues with the next request.

Operator response
If the error persists, tell the system programmer about the error.

System programmer response
Start the SNMPQE procedure with a larger region size.

Module
SNMPPARS

Procedure name
parse_SNMP_packet

EZA6329W parse_SNMP_packet: cannot parse packet (str_setup)

Explanation
The SQE server could not parse an SNMP request because sufficient storage could not be allocated. The request is ignored.

System action
Processing continues with the next request.

Operator response
If the error persists, tell the system programmer about the error.

System programmer response
Start the SNMPQE procedure with a larger region size.

Module
SNMPPARS

Procedure name
parse_SNMP_packet

EZA6330W parse_SNMP_packet: cannot parse packet (ps2pe)
EZA6331W ps_err

Explanation
The SQE server could not parse an SNMP request because of an error converting a presentation stream to a presentation element. The request is ignored.
System action
Processing continues with the next request.

Operator response
Tell the system programmer about the error.

System programmer response
Contact the IBM Software Support Center.

Module
SNMPPARS

Procedure name
parse_SNMP_packet

EZA6332W parse_SNMP_packet: cannot parse packet (decode)

Explanation
The SQE server encountered an error decoding an SNMP request. The request is ignored.

System action
Processing continues with the next request.

Operator response
Tell the system programmer about the error.

System programmer response
Identify the agent that sent the incorrect request and correct any problems at that agent.

Module
SNMPPARS

Procedure name
parse_SNMP_packet

EZA6333W parse_SNMP_packet: corrupted packet

Explanation
The SNMP server found a corrupted packet. There is a problem with the agent that sent the request. The request is ignored.

System action
Processing continues with the next request.

Operator response
Identify the SNMP agent that sent the incorrect packet, and correct any errors.
System programmer response
No action is needed.

Module
SNMPPARS

Procedure name
parse_SNMP_packet

EZA6334W snmp_parse: store_SNMP_var cannot parse packet (length1)

Explanation
SNMPPARS could not parse a packet because the packet was longer than expected.

System action
Processing continues.

Operator response
Tell the system programmer about the error.

System programmer response
Determine the device sending packets with incorrect lengths. If it is SNMPD agent, verify that the packet size was specified correctly at startup.

Module
SNMPPARS

Procedure name
store_SNMP_var

EZA6335W snmp_parse: store_SNMP_var cannot parse packet (length2)

Explanation
SNMPPARS could not parse a packet because the packet was longer than expected.

System action
Processing continues.

Operator response
Tell the system programmer about the error.

System programmer response
Determine the device sending packets with incorrect lengths. If it is SNMPD agent, verify that the packet size was specified correctly at startup.
Procedure name
store_SNMP_var

EZA6336W store_SNMP_var: unknown MIB type: type

Explanation
The SQE server received a response containing an object with an unknown MIB type. The request is ignored. The object is not processed.

System action
Processing continues with the next request.

Operator response
Tell the system programmer about the error.

System programmer response
Identify the agent sending the incorrect response, and correct any problems with the agent.

Module
SNMPPARS

Procedure name
store_SNMP_var

EZA6337W make_SNMP_packet: illegal SNMP request: request

Explanation
The SQE server found an incorrect SNMP request. The request is ignored.

System action
Processing continues with the next request.

Operator response
Tell the system programmer about the error.

System programmer response
Contact the IBM Software Support Center.

Module
SNMPPARS

Procedure name
make_SNMP_request

EZA6338W make_SNMP_request: illegal object identifier: id

Explanation
The SQE server found an incorrect object identifier, which was ignored. The request is ignored.
System action
Processing continues with the next request.

Operator response
Tell the system programmer about the error.

System programmer response
An application has provided an incorrect object identifier. Identify the application and correct the error. If you are using an IBM application program (for example, the NetView program), contact the IBM Software Support Center.

Module
SNMPPARS

Procedure name
make_SNMP_request

EZA6339W make_SNMP_request: out of memory (oid_cpy)

Explanation
A call to oid_cpy was unsuccessful because it could not allocate the storage needed.

System action
Processing continues.

Operator response
Tell the system programmer about the error.

System programmer response
Increase the region size.

Module
SNMPPARS

Procedure name
make_SNMP_request

EZA6340W make_SNMP_packet: no MIB type defined: name

Explanation
An application has tried to issue an SNMP Set request for an object for which no MIB description data is known. The request is ignored.

System action
Processing continues with the next request.

Operator response
Tell the system programmer about the error.
System programmer response
Add the relevant data to the MIB description file and restart SQESERV. This is the hlq.MIB@DESC.DATA data set.

Module
SNMPPARS

Procedure name
make_SNMP_request

EZA6341W  make_SNMP_request: cannot parse packet (encode)

Explanation
A call to make_SNMP_request was unsuccessful. Preceding messages further define the nature of the problem.

System action
Processing continues.

Operator response
Tell system programmer about the problem.

System programmer response
If the problem is due to incorrect packet information or an incorrect packet format, contact the IBM Software Support Center.

Module
SNMPPARS

Procedure name
make_SNMP_request

EZA6342W  make_SNMP_packet: cannot parse packet (ps_alloc)

Explanation
The SQE server could not allocate sufficient storage to parse a packet. The request is ignored.

System action
Processing continues with the next request.

Operator response
If the error persists, tell the system programmer about the error.

System programmer response
Start the SNMPQE procedure with a larger region size.

Module
SNMPPARS
Procedure name
make_SNMP_request

EZA6343W  make_SNMP_packet: cannot parse packet (str_setup)

Explanation
The SQE server could not parse an SNMP request because sufficient storage could not be allocated. The request is ignored.

System action
Processing continues with the next request.

Operator response
If the error persists, tell the system programmer about the error.

System programmer response
Start the SNMPQE procedure with a larger region size.

Module
SNMPPARS

Procedure name
make_SNMP_request

EZA6344W  make_SNMP_packet: cannot parse packet (pe2ps)

Explanation
The SQE server could not parse an SNMP request because of an error converting a presentation element to a presentation stream. The request is ignored.

System action
Processing continues with the next request.

Operator response
Tell the system programmer about the error.

System programmer response
Invalid data was passed in the SNMP request. Check the application program that initiated the request. If you are using an IBM application program (for example, the NetView program), contact the IBM Software Support Center.

Module
SNMPPARS

Procedure name
make_SNMP_request

EZA6345W  snmp_parse: do_qb2str: out of memory
**Explanation**
The SQE server could not parse an SNMP request because sufficient storage could not be allocated. The request is ignored.

**System action**
Processing continues.

**Operator response**
Tell the system programmer about the problem if it persists.

**System programmer response**
Start the SNMPQE procedure with a larger region size.

**Module**
SNMPPARS

**Procedure name**
do_qb2str

**EZA6346W  snmp_parse: is_invalid_ObjectID: illegal object identifier obj_id**

**Explanation**
The SQE server encountered an incorrect object identifier. The request is ignored.

**System action**
Processing continues.

**Operator response**
Tell the system programmer about the problem.

**System programmer response**
Check the sending device to determine why it is sending an object identifier that is not allowed. Correct the object identifier and resubmit. See z/OS Communications Server: IP Programmer's Guide and Reference for more information about the correct format of the object identifier in "Management Information Base (MIB) Objects."

**Module**
SNMPPARS

**Procedure name**
do_qb2str

**EZA6347W  out of memory in cache_object (new)**

**Explanation**
The SQE server could not allocate storage to add a new object to a list. No caching is done.
**System action**
Processing continues.

**Operator response**
Tell the system programmer about the error.

**System programmer response**
Start the SNMPQE procedure with a larger region size.

**Module**
SQECACHE

**Procedure name**
cache_object

**EZA6348W** out of memory in cache_object name

**Explanation**
The SQE server could not allocate enough storage to add an object to a list. No caching is done.

**System action**
Processing continues.

**Operator response**
Tell the system programmer about the error.

**System programmer response**
Start the SNMPQE procedure with a larger region size.

**Module**
SQECACHE

**Procedure name**
cache_object

**EZA6351E** error code err_code: illegal protocol.

**Explanation**
The SNMP query engine received a packet with an unknown protocol. The packet is discarded.

**System action**
The SNMP query engine continues.

**Operator response**
Contact the system programmer.
**System programmer response**
Determine the device that is sending incorrect packets to the SNMP query engine and why it is sending them.

**Module**
SQEPNV

**Procedure name**
sqepnv

**EZA6352E  error code err_code: illegal character set**

**Explanation**
The SNMP query engine received a packet with a character other than ASCII or EBCDIC. The packet is discarded.

**System action**
The SNMP query engine continues.

**Operator response**
Contact the system programmer.

**System programmer response**
Determine the device that is sending incorrect packets to the SNMP query engine and why it is sending them.

**Module**
SQEPNV

**Procedure name**
sqepnv

**EZA6353E  error code err_code: illegal packet type**

**Explanation**
The SNMP query engine received a packet that it did not recognize. The packet is discarded.

**System action**
The SNMP query engine continues.

**Operator response**
Contact the system programmer.

**System programmer response**
Determine the device that is sending incorrect requests to the SNMP query engine and why it is sending them. See z/OS Communications Server: IP User's Guide and Commands for more information valid SNMP commands.

**Module**
SQEPNV
**EZA6354E**  error code *err_code*: illegal request packet type

**Explanation**
The SNMP query engine received a request packet that it did not recognize. The packet is discarded.

**System action**
The SNMP query engine continues.

**Operator response**
Contact the system programmer.

**System programmer response**
Determine the device that is sending incorrect requests to the SNMP query engine and why it is sending them. See z/OS Communications Server: IP User’s Guide and Commands for more information valid SNMP commands.

**Module**
SQEPNV

**Procedure name**
sqepnv

**EZA6355E**  error code *err_code*: null get variable list

**Explanation**
The SNMP query engine received a GET request that did not have any variables passed with it. The packet is discarded.

**System action**
The SNMP query engine continues.

**Operator response**
See z/OS Communications Server: IP User’s Guide and Commands for more information about the valid format for SNMP GET commands. The variables expected by the SNMP query engine are the host name, community name, and the variable name(s).

**System programmer response**
No action is needed.

**Module**
SQEPNV

**Procedure name**
nv_get_variable

**EZA6356E**  error code *err_code*: unknown MIB variable
Explanation
The SNMP query engine tried to locate the Management Information Base (MIB) variable. Either the MIB variable was unable to be located, the ANSI name is longer than 200 characters, the end of string character was not located at the end of the MIB variable, or the MIB variable type could not be located.

System action
The SNMP query engine continues.

Operator response
Verify that the hlq.MIBDESC.DATA is correct. See z/OS Communications Server: IP User's Guide and Commands. Verify that the request to the SNMP query engine was done correctly. Check the SNMP agent job output for messages that indicate a problem. See z/OS Communications Server: IP User's Guide and Commands for more information about the valid format for SNMP query commands and MIB variable names.

System programmer response
No action is needed.

Module
SQEPNV

Procedure name
sqepnv

EZA6357E unrecognized type: type

Explanation
The SNMP query engine was unable to determine the data type within a MIB variable.

System action
The SNMP query engine stops processing the mib variable. The SNMP query engine continues.

Operator response
Verify that the hlq.MIBDESC.DATA is correct. See z/OS Communications Server: IP User's Guide and Commands chapter on "Managing TCP/IP Network Resources Using SNMP." Verify that the request to the SNMP query engine was done correctly. See z/OS Communications Server: IP User's Guide and Commands for more information about the valid format for SNMP query commands.

System programmer response
No action is needed.

Module
SQEPNV

Procedure name
sqepnv

EZA6358W null hdr pointer
Explanation
The pointer to the packet header is equal to 0.

System action
The SNMP query engine stops processing the packet and continues.

Operator response
Tell the system programmer about the error.

System programmer response
View job output for the SNMP query engine and look for any other messages that may show more information about the problem. If the problem persists contact the IBM Software Support Center.

Module
SQEPRNV

Procedure name
prNVparse

EZA6359I  major version major version
EZA6360I  minor version minor version
EZA6361I  release release

Explanation
These messages echo the major and minor version numbers and the release levels of the received packet.

System action
The SNMP query engine processes the packet and continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
SQEPRNV

Procedure name
prNVparse

EZA6362W  illegal protocol specification

Explanation
The SNMP query engine has received a packet with an incorrect protocol specification. The SNMP query engine stops processing the packet.
System action
The SNMP query engine continues.

Operator response
Contact the system programmer.

System programmer response
View the previous messages EZA6359 - EZA6361 for the packets major and minor versions and the release. Determine the device that is sending packets with incorrect protocol specifications and investigate.

Module
SQEPRNV

Procedure name
prNVparse

**EZA6363I native set: character set**

Explanation
The SNMP query engine is displaying the native character set for the packet.

System action
The SNMP query engine continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
SQEPRNV

Procedure name
prNVparse

**EZA6364I packet type: packet type**

Explanation
The SNMP query engine is displaying the type of packet received.

System action
The SNMP query engine continues.

Operator response
No action is needed.
System programmer response
No action is needed.

Module
SQEPRNV

Procedure name
prNVparse

EZA6365W packet_type&colon illegal packet type ( packet_type )

Explanation
The SNMP query engine has received an incorrect type of packet.

System action
The SNMP query engine stops processing the packet. The SNMP query engine continues.

Operator response
If the packet was sent as a request, verify that the request was sent correctly. See z/OS Communications Server: IP User's Guide and Commands for valid SNMP commands. If the error was the result of a response for an SNMP agent, notify the system programmer.

System programmer response
Determine the SNMP agent sending incorrect responses and investigate the reason it is sending incorrect responses.

Module
SQEPRNV

Procedure name
prNVparse

EZA6366I null request body

Explanation
The SNMP query engine has received a request packet, but the body of the request was empty.

System action
The SNMP query engine stops processing the packet. The SNMP query engine continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
SQEPRNV
**EZA6367I  sequence ID: sequence_ID**

**Explanation**
The SNMP query engine has received a packet that has the stated sequence_ID. The SNMP query engine will use the sequence_ID to associate requests with responses.

**System action**
The SNMP query engine continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
SQEPRNV

**Procedure name**
prNVrequest

**EZA6368I  hostname len: name length**

**Explanation**
The SNMP query engine is displaying the length of the name of the host the request will be sent to.

**System action**
The SNMP query engine continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
SQEPRNV

**Procedure name**
prNVrequest

**EZA6369W  no hostname:**

**Explanation**
The SNMP query engine could not find a host name for the request packet.
**System action**  
The SNMP query engine continues.

**Operator response**  
Verify that the request was entered correctly.

**System programmer response**  
No action is needed.

**Module**  
SQEPRNV

**Procedure name**  
prNVrequest

<table>
<thead>
<tr>

<td><strong>EZA6370I</strong></td>
<td><strong>hostname: hostname</strong></td>
</tr>
<tr>
<td><strong>EZA6371I</strong></td>
<td><strong>community len: community len</strong></td>
</tr>
</tbody>
</table>

**Explanation**  
The SNMP query engine is displaying the host name that the request will be sent to.

**System action**  
The SNMP query engine continues.

**Operator response**  
No action is needed.

**System programmer response**  
No action is needed.

**Module**  
SQEPRNV

**Procedure name**  
prNVrequest
**System programmer response**
No action is needed.

**Module**
SQEPRNV

**Procedure name**
prNVrequest

**EZA6372W** no community name!

**Explanation**
The SNMP query engine could not find a community name for the request packet.

**System action**
The SNMP query engine continues.

**Operator response**
Verify that the request was entered correctly.

**System programmer response**
No action is needed.

**Module**
SQEPRNV

**Procedure name**
prNVrequest

**EZA6373I** community name: community name

**Explanation**
The SNMP query engine is displaying the community name that the request was made for.

**System action**
The SNMP query engine continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
SQEPRNV
Procedure name
prNVrequest

EZA6374I  optional length optional length

Explanation
The SNMP query engine is displaying the number of retry parameters that SNMPIUCV has received from the SNMPARMS member of the DSIPARMS data set.

System action
The SNMP query engine continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
SQEPRNV

Procedure name
prNVrequest

EZA6375I  max. retries: snmprcnt

Explanation
The SNMP query engine is displaying the number of times that the SNMP query engine will resend an SNMP PDU when no response was received.

System action
The SNMP query engine continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
SQEPRNV

Procedure name
prNVrequest

EZA6376I  initial timeout snmprio
Explanation
The SNMP query engine is displaying the timeout value for a request (in tenths of a second). After sending an SNMP request to an agent, the SNMP query engine waits \( n \) tenths of a second for a response.

System action
The SNMP query engine continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
SQEPRNV

Procedure name
prNVrequest

EZA6377W backoff exponent: snmpreto

Explanation
The SNMP query engine is displaying the retry back-off exponent. The retry back-off exponent specifies whether the timeout value between retries of an SNMP request is calculated linearly or exponentially. The valid values are 1 (linear) or 2 (exponential). The default is 2.

System action
The SNMP query engine continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
SQEPRNV

Procedure name
prNVrequest

EZA6378W illegal packet type (packet type)

Explanation
The SNMP query engine has received an incorrect type of packet.

System action
The SNMP query engine stops processing the packet. The SNMP query engine continues.
Operator response
If the packet was sent as a request, verify that the request was sent correctly. See z/OS Communications Server: IP User's Guide and Commands for valid SNMP commands. If the error was the result of a response for an SNMP agent, notify the system programmer.

System programmer response
Determine the SNMP agent sending incorrect responses and investigate the reason it is sending incorrect responses.

Module
SQEPRNV

Procedure name
prNVparse

EZA6379I  null list hdr

Explanation
The SNMP query engine has received a request packet from SNMPIUCV that has an empty list header.

System action
The SNMP query engine stops processing the packet. The SNMP query engine continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
SQEPRNV

Procedure name
prNVgetreq, prNVsetreq

EZA6380I  name length length
EZA6381I  name name

Explanation
The SNMP query engine has received a request or is sending a response to a SNMPIUCV packet. Displayed is the length and the name of the variable being sent or requested.

System action
The SNMP query continues to process the packet.

Operator response
No action is needed.
System programmer response
No action is needed.

Module
SQEPRNV

Procedure name
prNVgetreq, prNVsetreq

EZA6382I value type type

Explanation
The SNMP query engine has received a request or is sending a response to a SNMPIUCV packet. Displayed is the value type of the data being processed. The valid value types are:

- text
- number
- internet address
- empty
- counter
- gauge
- time ticks
- display string
- string
- object ID

System action
The SNMP query continues to process the packet.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
SQEPRNV

Procedure name
prNVgetreq, prNVsetreq

EZA6383W value type: unknown type!

Explanation
The SNMP query engine has received a request or is sending a response to a SNMPIUCV packet. The value type received is not a known value type. The valid value types are:

- text
- number
- internet address
- empty
System action
The SNMP query engine tries to process the packet. The SNMP query engine continues.

Operator response
Verify that the hlq.MIBDESC.DATA correct. Verify that the request to the SNMP query engine was done correctly. See z/OS Communications Server: IP User's Guide and Commands for more information about the valid format for SNMP query commands.

System programmer response
No action is needed.

Module
SQEPRNV

Procedure name
prNVgetreq, prNVsetreq

EZA6384I  value length :length

Explanation
The SNMP query engine has received a request or is sending a response to a SNMPIUCV packet. The value length is being displayed.

System action
The SNMP query engine continues to process the packet. The SNMP query engine continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
SQEPRNV

Procedure name
prNVgetreq, prNVsetreq

EZA6385I  value :string value
Explanation
The SNMP query engine has received a request or is sending a response to a SNMIPUCV packet. The Management Information Base (MIB) variable is being displayed.

System action
The SNMP query engine continues to process the packet. The SNMP query engine continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
SQEPRNV

Procedure name
prNVgetreq, prNVsetreq

EZA6386I  value : decimal value

Explanation
The SNMP query engine has received a request or is sending a response to a SNMIPUCV packet. The Management Information Base (MIB) variable is being displayed.

System action
The SNMP query engine continues to process the packet. The SNMP query engine continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
SQEPRNV

Procedure name
prNVgetreq, prNVsetreq

EZA6387I  value : unsigned value

Explanation
The SNMP query engine has received a request or is sending a response to a SNMIPUCV packet. The Management Information Base (MIB) variable is being displayed.

System action
The SNMP query engine continues to process the packet. The SNMP query engine continues.

934  z/OS Communications Server: IP Messages: Volume 1 (EZA)
Operator response
No action is needed.

System programmer response
No action is needed.

Module
SQEPRNV

Procedure name
prNVgetreq, prNVsetreq

EZA6388I  major error: major error number
EZA6389I  minor error: minor error number
EZA6390I  error index: error index
EZA6391I  error text len: error text len
EZA6392I  error text: error text

Explanation
The SNMP query engine has received a response to a SNMPIUCV packet. The major and minor error codes are being displayed along with any error text. For more information about SNMP error codes see z/OS Communications Server: IP User’s Guide and Commands.

System action
The SNMP query engine continues to process the packet. The SNMP query engine continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
SQEPRNV

Procedure name
prNVgetreq, prNVsetreq

EZA6393W  null response request body

Explanation
The SNMP query engine has received a response packet from an SNMP agent. The body of the response was empty.

System action
The SNMP query engine stops processing the packet. The SNMP query engine continues.
Operator response
Contact the system programmer.

System programmer response
Determine the SNMP agent that is sending incorrect packets to the SNMP query engine. Investigate why the agent is sending incorrect packets.

Module
SQEPRNV

Procedure name
prNVresp_copy

Explanation
The SNMP query engine has received a trap response or trap request packet. Displayed is filter ID used to filter the trap responses.

System action
The SNMP query engine continues processing the packet.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
SQEPRNV

Procedure name
prNVresp_copy, prNVtrap, prNVtrap_req

Explanation
The SNMP query engine has received a trap response or trap request packet. Displayed is the IP address of the agent sending the trap response.

System action
The SNMP query engine continues processing the packet.

Operator response
No action is needed.

System programmer response
No action is needed.
Module
SQEPRNV

Procedure name
prNVresp_copy, prNVtrap

**EZA6396I  network mask  network mask**

**Explanation**
The SNMP query engine has received a trap response packet. Displayed is the network mask that is ANDed with the dotted decimal IP address. The result will be compared with the wanted network.

**System action**
The SNMP query engine continues processing the packet.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

---

**Module**
SQEPRNV

**Procedure name**
prNVresp_copy

**EZA6397I  desired network:  network mask**

**Explanation**
The SNMP query engine has received a trap response packet. Displayed is the wanted network. The wanted network will be compared to the results from ANDing the agent address with the network mask.

**System action**
The SNMP query engine continues processing the packet.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

---

**Module**
SQEPRNV

**Procedure name**
prNVresp_copy

**EZA6398I  null trap body**
**Explanation**
The SNMP query engine has received a trap packet that has no data associated with it.

**System action**
The SNMP query engine stops processing the packet. The SNMP query engine continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
SQEPRNV

**Procedure name**
prNVtrap

---

**EZA6399I  generic trap: decimal_value(hex_value)**

**Explanation**
The SNMP query engine has received a trap packet. The generic trap type value is displayed. See z/OS Communications Server: IP User's Guide and Commands for more information about SNMP generic trap types.

**System action**
The SNMP query engine continues processing the packet.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
SQEPRNV

**Procedure name**
prNVtrap

---

**EZA6400I  specific trap: decimal_value(hex_value)**

**Explanation**
The SNMP query engine has received a trap packet. The specific trap type value is displayed. The specific trap value will be 0 unless the generic trap type is 6. For more information about generic and specific traps see z/OS Communications Server: IP User's Guide and Commands.

**System action**
The SNMP query engine continues processing the packet.
**Operator response**  
No action is needed.

**System programmer response**  
No action is needed.

**Module**  
SQEPRNV

**Procedure name**  
prNVtrap

**Explanation**  
The SNMP query engine has received a trap packet. The time stamp that was present within the trap packet is displayed.

**System action**  
The SNMP query engine continues processing the packet.

The SNMP query engine continues processing the packet.

**Operator response**  
No action is needed.

**System programmer response**  
No action is needed.

**Module**  
SQEPRNV

**Procedure name**  
prNVtrap

**EZA6402I**  
**enterprise len: length**

**EZA6403I**  
**enterprise: enterprise**

**Explanation**  
The SNMP query engine has received a trap packet. The length of the enterprise object ID and the enterprise object ID are displayed. See z/OS Communications Server: IP User's Guide and Commands for more information about enterprise object IDs.

**System action**  
The SNMP query engine continues processing the packet.

**Operator response**  
No action is needed.
System programmer response
No action is needed.

Module
SQEPRNV

Procedure name
prNVtrap

EZA6404W null var_name body

Explanation
The SNMP query engine tried to parse the variable name out of the packet. The body of the packet that should contain the name was empty.

System action
The SNMP query engine stops processing the packet. The SNMP query engine continues.

Operator response
Verify that the request was done properly and resubmit.

System programmer response
No action is needed.

Module
SQEPRNV

Procedure name
prNVvar_name

EZA6405I object ID len: length
EZA6406I object ID: object id

Explanation
The SNMP query engine has received a var_name packet. Displayed is the object ID and its length. See z/OS Communications Server: IP User's Guide and Commands, for more information about enterprise object IDs.

System action
The SNMP query engine continues processing the packet.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
SQEPRNV
**Explanation**
The SNMP query engine received a ping request packet. The body of the packet was empty.

**System action**
The SNMP query engine stops processing the packet. The SNMP query engine continues.

**Operator response**
Verify that the ping request was done correctly and resubmit.

**System programmer response**
No action is needed.

**Module**
SQEPRNV

**Procedure name**
prNVping_req

**Explanation**
The SNMP query engine received the MVS STOP command and ended.

**System action**
SNMP query engine ends.

EZA6409I  socket_type listening socket socket_value removed from select mask

Explanation
The indicated listening socket has been removed from the selection mask because the maximum number of sockets are in use. When the listening socket is not included in the selection mask, new connections are not accepted for this socket.

In the message text:

socket_type
  Indicates whether the listening socket type is TCP or IUCV.

socket_value
  Indicates the listening socket value.

When an existing connection closes, message EZA6410I is generated in the output file and new connections can be accepted again.

System action
The SNMP query engine continues processing existing connections, but no new connections are accepted for this listening socket.

Operator response
None.

System programmer response
None.

User response

Example
EZA6290I Accepted new client connection
EZA6409I TCP listening socket 5 removed from select mask
EZA6293I Terminated client connection
EZA6410I TCP listening socket 5 added back to select mask
EZA6290I Accepted new client connection

EZA6410I  socket_type listening socket socket_value added back to select mask

Explanation
This message is generated when the listening socket is added to the selection mask. Adding the socket to the selection mask allows new connections to be accepted for the socket.

In the message text:

socket_type
Indicates whether the listening socket type is TCP or IUCV.

socket_value
Indicates the listening socket value.

See related message EZA6409I.

System action
The SNMP query engine continues.

EZA6290I Accepted new client connection
```

**EZA6423I mibdesc_file_name(line_num), illegal object identifier :object_id**

**Explanation**
The SNMP agent is checking the MIBDESC.DATA data set. Displayed is the MIBDESC data set name, line number, and the object ID that was not correct.

**System action**
The SNMP agent continues processing the MIBDESC file.

**Operator response**
Contact system programmer.

**System programmer response**
Correct the MIBDESC.DATA data set.

**Module**
MIB@DESC

**Procedure name**

```
EZA6424I Decoded SNMP PDU :
```

**Explanation**
SNMP has received an SNMP message.

**System action**
The SNMP continues processing the SNMP message.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.
Module
SNMPPRNT

Procedure name
print_SNMP_Message

EZA6425W  Message: out of memory

Explanation
The SNMP Query Engine was decoding an SNMP message, but the SNMP Query Engine could not allocate enough storage to build the decoded SNMP message. The SNMP request is discarded.

System action
Processing continues with the next request.

Operator response
If the error persists, restart the SNMP Query Engine with a larger region size.

System programmer response
No action is needed.

Module
SNMPTYPE

Procedure name
decode_SNMP_Message, encode_SNMP_Message

EZA6426W  version: out of memory

Explanation
The SNMP Query Engine was encoding an SNMP PDU, but the SNMP Query Engine could not allocate enough storage to build the presentation element for the SNMP version number. The SNMP message is discarded.

System action
Processing continues with the next request.

Operator response
If the error persists, restart the SNMP Query Engine with a larger region size.

System programmer response
No action is needed.

Module
SNMPTYPE

Procedure name
encode_SNMP_Message

EZA6427E  version has unknown component: component
**Explanation**
While encoding or decoding the presentation element for the SNMP version number in an SNMP request, the SNMP Query Engine was expecting the presentation element to have a version number of 0 (SNMP version-1). The SNMP request is discarded.

**System action**
Processing continues with the next request.

**Operator response**
If the error persists, tell the system programmer about the error.

**System programmer response**
For errors in decoding incoming SNMP requests, run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center. For errors encoding an SNMP response or trap PDU to be sent out, contact the IBM Software Support Center.

**Module**
SNMPTYPE

**Procedure name**
decode_SNMP_Message, encode_SNMP_Message

**EZA6428E**  
Message bad sequence: pe_error

**Explanation**
If decoding the presentation element for an SNMP request, the SNMP Query Engine was expecting a presentation element with a class of Sequence to have a form of Constructed. If encoding an SNMP response or trap PDU, the SNMP Query Engine received the indicated pe_error while adding a presentation element to a sequence. The SNMP request is discarded.

**System action**
Processing continues with the next request.

**Operator response**
Tell the system programmer about the error.

**System programmer response**
For errors occurring on incoming SNMP messages, run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center. For errors occurring on outgoing SNMP PDUs (other than out of storage errors), contact the IBM Software Support Center.

**Module**

EZA6437W error-index: out of memory

Explanation
The SNMP Query Engine was encoding an SNMP PDU to be sent out, but the SNMP Query Engine could not allocate enough storage to build the presentation element for the error-index. The SNMP PDU is discarded.

System action
Processing continues with the next request.
Operator response
If the error persists, restart the SNMP Query Engine with a larger region size.

System programmer response
No action is needed.

Module
SNMPTYPE

Procedure name
encode_SNMP_PDU

EZA6438W Trap-PDU: out of memory

Explanation
The SNMP Query Engine was encoding an SNMP TRAP PDU, but the SNMP Query Engine could not allocate enough memory to build the presentation element for the PDU. The TRAP PDU is discarded.

System action
Processing continues with the next request.

Operator response
If the error persists, restart the SNMP Query Engine with a larger region size.

System programmer response
No action is needed.

Module
SNMPTYPE

Procedure name
encode_SNMP_trap_PDU

EZA6439W enterprise initialization fails

Explanation
The SNMP Query Engine was encoding an SNMP TRAP PDU, but the trap being encoded does not contain a valid enterprise object ID. The TRAP PDU is discarded.

System action
Processing continues with the next request.

Operator response
Tell the system programmer about the error.

System programmer response
Contact the IBM Software Support Center.
Module
SNMPTYPE

Procedure name
encode_SNMP_trap_PDU

EZA6440W  enterprise: out of memory

Explanation
The SNMP Query Engine was encoding an SNMP TRAP PDU, but the SNMP Query Engine could not allocate enough storage to build the presentation element for the enterprise object ID. The SNMP TRAP PDU is discarded.

System action
Processing continues with the next request.

Operator response
If the error persists, restart the SNMP Query Engine with a larger region size.

System programmer response
No action is needed.

Module
SNMPTYPE

Procedure name
encode_SNMP_trap_PDU

EZA6441E  Trap-PDU bad sequence: pe_error

Explanation
The SNMP Query Engine received the indicated pe_error while encoding or decoding an SNMP TRAP PDU. The SNMP request is discarded.

System action
Processing continues with the next request.

Operator response
If the error persists, tell the system programmer about the error.

System programmer response
For errors encountered while decoding an incoming TRAP, run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center. For errors encountered while encoding an SNMP TRAP PDU, contact the IBM Software Support Center.
**Module**
SNMPTYPE

**Procedure name**
de decode_SNMP_trap_PDU, encode_SNMP_trap_PDU

---

**EZA6442W** generic-trap: out of memory

**Explanation**
The SNMP Query Engine was encoding an SNMP TRAP PDU, but the SNMP Query Engine could not allocate enough storage to build the presentation element for the generic-trap type. The SNMP TRAP PDU is discarded.

**System action**
Processing continues with the next request.

**Operator response**
If the error persists, restart the SNMP Query Engine with a larger region size.

**System programmer response**
No action is needed.

---

**Module**
SNMPTYPE

**Procedure name**
en encode_SNMP_trap_PDU

---

**EZA6443E** generic-trap has unknown component: component

**Explanation**
While encoding or decoding the presentation element for the generic-trap type in an SNMP TRAP PDU, the SNMP Query Engine was expecting the generic-trap to be 0 (coldStart), 1 (warmStart), 2 (linkDown), 3 (linkUp), 4 (authenticationFailure), 5 (egpNeighborLoss), or 6 (enterpriseSpecific). Instead, the generic-trap type had the indicated value. The SNMP trap is discarded.

**System action**
Processing continues with the next request.

**Operator response**
If the error persists, tell the system programmer about the error.

**System programmer response**
For errors encountered while decoding an incoming SNMP TRAP PDU, run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that originated the trap. If the received encode trap is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center. For errors encountered while encoding an outgoing SNMP TRAP PDU, contact the IBM Software Support Center.
EZA6444W  specific-trap: out of memory

Explanation
The SNMP Query Engine was encoding an SNMP TRAP PDU, but the SNMP Query Engine could not allocate enough storage to build the presentation element for the specific trap type. The SNMP TRAP PDU is discarded.

System action
Processing continues with the next request.

Operator response
If the error persists, restart the SNMP Query Engine with a larger region size.

System programmer response
No action is needed.

EZA6445W  VarBind: out of memory

Explanation
The SNMP Query Engine was encoding an SNMP PDU, but the SNMP Query Engine could not allocate enough memory to build the presentation element for the variable bindings pair. The SNMP PDU is discarded.

System action
Processing continues with the next request.

Operator response
If the error persists, restart the SNMP Query Engine with a larger region size.

System programmer response
No action is needed.
Explanation
The SNMP Query Engine received the indicated pe_error while encoding or decoding the variable bindings in an
SNMP PDU. The SNMP request is discarded.

System action
Processing continues with the next request.

Operator response
If the error persists, tell the system programmer about the error.

System programmer response
For errors encountered while decoding an incoming PDU, run traces (either the SNMP Query Engine traces or
some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query
Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP
client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is
 parsing the request incorrectly. Contact the IBM Software Support Center. For errors encountered encoding the
PDU, contact the IBM Software Support Center.

Module
SNMPTYPE

Procedure name
decode_SNMP_VarBind, encode_SNMP_VarBind

EZA6447W VarBindList: out of memory

Explanation
The SNMP Query Engine was encoding an SNMP PDU, but the SNMP Query Engine could not allocate enough
storage to build the presentation element for the variable bindings list. The SNMP PDU is discarded.

System action
Processing continues with the next request.

Operator response
If the error persists, start the SNMP Query Engine with a larger region size.

System programmer response
No action is needed.

Module
SNMPTYPE

Procedure name
encode_SNMP_VarBindList

EZA6448E Message bad class/form/id: class/form/ld
**Explanation**
While decoding the presentation element for the SNMP request, the SNMP Query Engine was expecting the presentation element to have a class of 0 (universal), a form of 1 (constructed), and an ID of X'10'x (sequence). Instead, the encoded request had the indicated class, form, and ID. The SNMP request is discarded.

**System action**
Processing continues with the next request.

**Operator response**
Tell the system programmer about the error.

**System programmer response**
Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

**Module**

**EZA6476E PDU has too many elements(4): number**

**Explanation**
While decoding the data portion of an SNMP request, the SNMP Query Engine was expecting the request to have 4 presentation elements (request-id, error-status, error-index, and variable bindings). Instead, the PDU had the indicated number of elements. The SNMP request is discarded.

**System action**
Processing continues with the next request.

**Operator response**
If the error persists, tell the system programmer about the error.

**System programmer response**
Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

**Module**
SNMPTYPE
Procedure name
decode_SNMP_PDU

EZA6477E  Trap-PDU bad class:id: class:id

Explanation
While decoding the presentation element of an SNMP TRAP PDU, the SNMP Query Engine was expecting the presentation element to have a class of CONT (context-specific) and an ID of 4 (trap). Instead, the presentation element had the indicated class and ID. The SNMP request is discarded.

System action
Processing continues with the next request.

Operator response
If the error persists, tell the system programmer about the error.

System programmer response
Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module

EZA6520E ObjectName bad object identifier: pe_error

Explanation
The SNMP Query Engine received the indicated pe_error while decoding the variable name of an SNMP PDU. The SNMP request is discarded.

System action
Processing continues with the next request.

Operator response
Tell the system programmer about the error.

System programmer response
See z/OS Communications Server: IP and SNA Codes for information about pe_errors. Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module
SMITYPES

Procedure name
decode_SMI_ObjectName

EZA6521E number bad integer: pe_error

Explanation
The SNMP Query Engine received the indicated pe_error while decoding the presentation element for the variable value of an SNMP PDU. The syntax of the variable is number. The SNMP PDU is discarded.

System action
Processing continues with the next request.

Operator response
Tell the system programmer about the error.

System programmer response
See z/OS Communications Server: IP and SNA Codes for information about pe_errors. Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.
Module
SMITYPES

Procedure name
decode_SMI_ObjectSyntax

EZA6522E  string bad octetstring: pe_error

Explanation
The SNMP Query Engine was decoding the variable bindings of an SNMP PDU. The syntax of the variable is string. The SNMP Query Engine received the indicated pe_error while decoding the variable value. The SNMP PDU is discarded.

System action
Processing continues with the next request.

Operator response
Tell the system programmer about the error.

System programmer response
See z/OS Communications Server: IP and SNA Codes for information about pe_errors. Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module
SMITYPES

Procedure name
decode_SMI_ObjectSyntax

EZA6523E  object bad object identifier: pe_error

Explanation
The SNMP Query Engine received the indicated pe_error while decoding the presentation element for the variable value of an SNMP PDU. The syntax of the variable is object id. The SNMP PDU is discarded.

System action
Processing continues with the next request.

Operator response
Tell the system programmer about the error.

System programmer response
See z/OS Communications Server: IP and SNA Codes for information about pe_errors. Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.
EZA6524E  ObjectSyntax has unknown choice: class\form\id

Explanation

While decoding the presentation element of the variable value of an SNMP PDU, the SNMP Query Engine was expecting the presentation element to have one of the following class and ID combinations:

<table>
<thead>
<tr>
<th>Class</th>
<th>ID</th>
</tr>
</thead>
<tbody>
<tr>
<td>APPL (application-specific)</td>
<td>0 (internet address)</td>
</tr>
<tr>
<td>APPL (application-specific)</td>
<td>1 (counter)</td>
</tr>
<tr>
<td>APPL (application-specific)</td>
<td>2 (gauge)</td>
</tr>
<tr>
<td>APPL (application-specific)</td>
<td>3 (time-ticks)</td>
</tr>
<tr>
<td>APPL (application-specific)</td>
<td>4 (opaque)</td>
</tr>
<tr>
<td>UNIV (universal)</td>
<td>2 (number)</td>
</tr>
<tr>
<td>UNIV (universal)</td>
<td>4 (string)</td>
</tr>
<tr>
<td>UNIV (universal)</td>
<td>5 (empty)</td>
</tr>
<tr>
<td>UNIV (universal)</td>
<td>6 (object ID)</td>
</tr>
</tbody>
</table>

Instead, the presentation element had the indicated class, form, and ID. The SNMP PDU is discarded.

System action

Processing continues with the next request.

Operator response

Tell the system programmer about the error.

System programmer response

Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module

SMITYPES
**Procedural name**
decode_SMI_ObjectSyntax

**EZA6527E**  **NetworkAddress has unknown choice: classformid**

**Explanation**
While decoding the presentation element for the agent address of the SNMP TRAP PDU, the SNMP Query Engine was expecting the presentation element to have a class of APPL (application-specific) and an ID of 0 (internet address). Instead, the presentation element had the indicated class, form, and ID. The SNMP TRAP PDU is discarded.

**System action**
Processing continues with the next request.

**Operator response**
Tell the system programmer about the error.

**System programmer response**
Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

**Module**
SMITYPES, SMIPRINT

**Procedural name**
decode_SMI_NetworkAddress

**EZA6528E**  **IpAddress bad class/id: class/id**

**Explanation**
The SNMP Query Engine was decoding the agent address of an SNMP TRAP PDU or the variable bindings of an SNMP PDU. The syntax of the variable is internet address. The SNMP Query Engine was expecting the presentation element for the variable value or agent address to have a class of APPL (application-specific) and an ID of 0 (internet address). Instead, the presentation element had the indicated class and ID. The SNMP PDU is discarded.

**System action**
Processing continues with the next request.

**Operator response**
Tell the system programmer about the error.

**System programmer response**
Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received
encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module
SMITYPES

Procedure name
decode_SMI_IpAddress

EZA6529E   IpAddress bad octetstring: pe_error

Explanation
The SNMP Query Engine received the indicated pe_error while decoding the agent address of an SNMP TRAP PDU or the variable bindings of an SNMP PDU. The syntax of the variable is internet address. The SNMP PDU is discarded.

System action
Processing continues with the next request.

Operator response
Tell the system programmer about the error.

System programmer response
See z/OS Communications Server: IP and SNA Codes for information about pe_errors. Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module
SMITYPES

Procedure name
decode_SMI_IpAddress

EZA6530E   Counter bad class⁄id: class⁄id

Explanation
The SNMP Query Engine was decoding the variable bindings of an SNMP PDU. The syntax of the variable is counter. The SNMP Query Engine was expecting the presentation element for the variable value to have a class of APPL (application-specific) and a value of 1 (counter). Instead, the presentation element had the indicated class and ID. The SNMP request is discarded.

System action
Processing continues with the next request.

Operator response
If the error persists, tell the system programmer about the error.
**System programmer response**

Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

**Module**

SMITYPES

**Procedure name**

decode_SMI_Counter

---

**EZA6531E**  **Counter bad integer: pe_error**

**Explanation**

The SNMP Query Engine was decoding the variable bindings of an SNMP PDU. The syntax of the variable is `counter`. The SNMP Query Engine received the indicated `pe_error` while decoding the variable value. The SNMP request is discarded.

**System action**

Processing continues with the next request.

**Operator response**

Tell the system programmer about the error.

**System programmer response**

See z/OS Communications Server: IP and SNA Codes for information about `pe_errors`. Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

**Module**

SMITYPES

**Procedure name**

decode_SMI_Counter

---

**EZA6532E**  **Gauge bad classId : classId**

**Explanation**

The SNMP Query Engine was decoding the variable bindings of an SNMP PDU. The syntax of the variable is `gauge`. The SNMP Query Engine was expecting the presentation element for the variable value to have a class of `APPL` (application-specific) and an ID of 2 (gauge). Instead, the presentation element had the indicated class and ID. The SNMP PDU is discarded.

**System action**

Processing continues with the next request.
**Operator response**
Tell the system programmer about the error.

**System programmer response**
Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

**Module**
SMITYPES

**Procedure name**
decode_SMI_Gauge

---

**EZA6533E  Gauge bad integer: pe_error**

**Explanation**
The SNMP Query Engine received the indicated pe_error while decoding the presentation element for the variable value of an SNMP PDU. The syntax of the variable is `gauge`. The SNMP request is discarded.

**System action**
Processing continues with the next request.

**Operator response**
Tell the system programmer about the error.

**System programmer response**
See z/OS Communications Server: IP and SNA Codes for information about pe_errors. Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

**Module**
SMITYPES

**Procedure name**
decode_SMI_Gauge

---

**EZA6534E  TimeTicks bad class⁄id: class⁄id**

**Explanation**
The SNMP Query Engine was decoding the variable bindings of an SNMP PDU. The syntax of the variable is `time ticks`. The SNMP Query Engine was expecting the presentation element for the variable value to have a class of `APPL` (application-specific) and an ID of 3 (time ticks). Instead, the presentation element had the indicated class and ID. The SNMP PDU is discarded.
System action
Processing continues with the next request.

Operator response
Tell the system programmer about the error.

System programmer response
Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module
SMITYPES

Procedure name
decode_SMI_TimeTicks

EZA6535E  TimeTicks bad integer: pe_error

Explanation
The SNMP Query Engine received the indicated pe_error while decoding the presentation element for the variable value of an SNMP PDU. The syntax of the variable is time ticks. The SNMP PDU is discarded.

System action
Processing continues with the next request.

Operator response
Tell the system programmer about the error.

System programmer response
See z/OS Communications Server: IP and SNA Codes for information about pe_errors. Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module
SMITYPES

Procedure name
decode_SMI_TimeTicks

EZA6536E  Opaque bad class/id: class/id

Explanation
The SNMP Query Engine was decoding the variable bindings of an SNMP PDU. The syntax of the variable is opaque. The SNMP Query Engine was expecting the presentation element for the variable value to have a class
of APPL (application-specific) and an ID of 4 (opaque). Instead, the presentation element had the indicated class and ID. The SNMP PDU is discarded.

**System action**
Processing continues with the next request.

**Operator response**
Tell the system programmer about the error.

**System programmer response**
Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

**Module**
SMITYPES

**Procedure name**
decode_SMI_Opaque

**EZA6537E**  Opaque bad octetstring: pe_error

**Explanation**
The SNMP Query Engine received the indicated pe_error while decoding the variable bindings of an SNMP PDU. The syntax of the variable is opaque. The SNMP PDU is discarded.

**System action**
Processing continues with the next request.

**Operator response**
Tell the system programmer about the error.

**System programmer response**
See z/OS Communications Server: IP and SNA Codes for information about pe_errors. Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

**Module**
SMITYPES

**Procedure name**
decode_SMI_Opaque

**EZA6617I**  pDPIpacket: Major=major version, Minor=minor version, Release=release, Type=type
Explanation
The SNMP agent has received a pDPIpacket request. Displayed are the values in the snmp_dpi_hdr. See z/OS Communications Server: IP Programmer's Guide and Reference for more information about the pDPIpacket command.

System action
The SNMP agent continues processing the pDPIpacket.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
MKDPI

Procedure name
mkdpi

EZA6618W  pDPIpacket: No support for this level of DPI

Explanation
The SNMP agent has received a pDPIpacket request with Major release not equal to 2 or a minor release not equal to 1 or a release version not equal to 0 or 1. See z/OS Communications Server: IP Programmer's Guide and Reference for more information about the pDPIpacket command.

System action
The SNMP agent stops processing the pDPIpacket. The SNMP agent continues.

Operator response
Contact the system programmer.

System programmer response
Review the minor and major version levels and the release level displayed in preceding messages. Determine the agent making the request. Determine why it is making the request with an unsupported level of DPI.

Module
MKDPI

Procedure name
mkdpi

EZA6619I  pDPIget: oid=object id

Explanation
The SNMP agent has received a pDPIpacket request. Displayed is the object identifier being requested. See z/OS Communications Server: IP Programmer's Guide and Reference for more information about the pDPIpacket command.
System action
The SNMP agent continues processing the pDPIpacket.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
MKDPI

Procedure name
mkdpi

EZA6620I  pDPInext: group_id=group id, oid=object id

Explanation
The SNMP agent has received a pDPIpacket request. Displayed is the group identifier and object identifier being requested. See z/OS Communications Server: IP Programmer's Guide and Reference for more information about the pDPIpacket command.

System action
The SNMP agent continues processing the pDPIpacket.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
MKDPI

Procedure name
mkdpi

EZA6621E  pDPISet: Invalid packet, integer length =length

Explanation
The SNMP agent has received a pDPIpacket request. Displayed is the length of integer to be set. The length is not equal to 4. See z/OS Communications Server: IP Programmer's Guide and Reference for more information about the pDPIpacket command.

System action
The SNMP agent stops processing the pDPIpacket. The SNMP agent continues.
Operator response
Contact the system programmer.

System programmer response
Determine the agent that is sending the incorrect packet. Analyze the output to determine why it is sending incorrect packets.

Module
MKDPI

Procedure name
dpi_set_packet

EZA6622I  pDPIset: oid=object id, type='type'\(H\), value_len= length

Explanation
The SNMP agent has received a pDPIpacket request. Displayed is the object identifier, the SNMP_TYPE and the length of the value. See z/OS Communications Server: IP Programmer's Guide and Reference for more information about the pDPIpacket command.

System action
The SNMP agent continues processing the pDPIpacket.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
MKDPI

Procedure name
dpi_set_packet

EZA6623I  value=decimal_value hex_value

Explanation
The SNMP agent has received a pDPIpacket request. Displayed is the value of the object identifier in long decimal and hexadecimal formats. See z/OS Communications Server: IP Programmer's Guide and Reference for more information about the pDPIpacket command.

System action
The SNMP agent continues processing the pDPIpacket.

Operator response
No action is needed.
System programmer response
No action is needed.

Module
MKDPI

Procedure name
dpi_set_packet

EZA6624I value=decimal_value hex_value

Explanation
The SNMP agent has received a pDPIpacket request. Displayed is the value of the object identifier in unsigned long decimal and hexadecimal formats. See z/OS Communications Server: IP Programmer’s Guide and Reference for more information about the pDPIpacket command.

System action
The SNMP agent continues processing the pDPIpacket.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
MKDPI

Procedure name
dpi_set_packet

EZA6625I value='hex_value'H

Explanation
The SNMP agent has received a pDPIpacket request. Displayed is the value of the object identifier as an octet string format. See z/OS Communications Server: IP Programmer’s Guide and Reference for more information about the pDPIpacket command.

System action
The SNMP agent continues processing the pDPIpacket.

Operator response
No action is needed.

System programmer response
No action is needed.
**Module**
MKDPI

**Procedure name**
dpi_set_packet

**EZA6626I**  
PDItrap: generic=decimal_value hex_value, specific=decimal_value hex_value

**Explanation**
The SNMP agent has received a pDPItrap request. Displayed is the value of the traps generic and specific fields. Each field is displayed in decimal and hexadecimal formats. See z/OS Communications Server: IP Programmer’s Guide and Reference for more information about the pDPItrap command.

**System action**
The SNMP agent continues processing the pDPIpacket.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
MKDPI

**Procedure name**
dpi_trap_packet

**EZA6627I**  
PDItrap: generic=decimal_value hex_value, specific=decimal_value hex_value  
enterprise=enterprise value

**Explanation**
The SNMP agent has received a pDPItrap request. Displayed is the value of the traps generic and specific fields along the enterprise value. The generic and specific fields are displayed in both decimal and hexadecimal formats. See z/OS Communications Server: IP Programmer's Guide and Reference for more information about the pDPItrap command.

**System action**
The SNMP agent continues processing the pDPIpacket.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.
**Procedure name**
dpi_trap_packet

**EZA6628I**  
pDPItrap: generic=decimal_value hex_value, specific=decimal_value hex_value no enterprise specified.

**Explanation**
The SNMP agent has received a pDPItrap request using version 1.1 or higher. Displayed are the values of the trap's generic and specific fields. The generic and specific fields are displayed in both decimal and hexadecimal formats. No enterprise value was specified. See z/OS Communications Server: IP Programmer's Guide and Reference for more information about the pDPItrap command.

**System action**
The SNMP agent continues processing the pDPIpacket.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
MKDPI

**Procedure name**
dpi_trap_packet

**EZA6630E**  
fDPIparse: Unknown packet_type: type

**Explanation**
While parsing a packet from an SNMP subagent over the DPI interface, SNMPD was expecting the packet type to be 1 (get), 2 (getNext), 3 (set), 4 (trap), 5 (response), or 6 (register). Instead, the packet had the indicated type. The DPI request is discarded.

**System action**
Processing continues with the next request.

**Operator response**
Tell the system programmer about the error.

**System programmer response**
Check the DPI subagent program for errors. If there are no apparent errors in the subagent program, contact the IBM Software Support Center. If the subagent is the SNMP subagent existing in the TCPIP module, contact the IBM Software Support Center.

**Module**
MKDPI
**EZA6631E**  cDPIpacket: Unknown packet_type

**Explanation**
The SNMP agent has received a packet that is unknown.

**System action**
The SNMP agent stops processing the pDPIpacket. The SNMP agent continues.

**Operator response**
Contact the system programmer.

**System programmer response**
Determine the device that is sending the incorrect packets. View the device output to determine why it is sending incorrect packets. See z/OS Communications Server: IP Programmer's Guide and Reference for more information about the pDPIpacket command.

**Module**
MKDPI

**Procedure name**
cDPIpacket

**EZA6632E**  cDPIset: Invalid packet, integer length length

**Explanation**
The SNMP agent has received a set packet. The variable to be set is an integer type. Integer types must have a length of 4.

**System action**
The SNMP agent stops processing the pDPIpacket. The SNMP agent continues.

**Operator response**
Contact the system programmer.

**System programmer response**
Determine the device that is sending the incorrect packets. View the device output to determine why it is sending incorrect packets. See z/OS Communications Server: IP Programmer's Guide and Reference for more information about the pDPIpacket command.

**Module**
MKDPI

**Procedure name**
cDPIset

**EZA6633E**  mkMIBquery: Unknown packet type: packet type

1006  z/OS Communications Server: IP Messages: Volume 1 (EZA)
**Explanation**
The SNMP agent has received a mkDPIregister packet. While trying to query the Management Information Base (MIB) it determined that the packet type was unknown.

**System action**
The SNMP agent stops processing the pDPIpacket. The SNMP agent continues.

**Operator response**
Contact the system programmer.

**System programmer response**
Determine the device that is sending the incorrect packets. View the device output to determine why it is sending incorrect packets. See z/OS Communications Server: IP Programmer's Guide and Reference for more information about the pDPIregister command.

**Module**
MKDPI

**Procedure name**
mkMIBquery

**EZA6634E** mkDPIset: Unknown SNMP_TYPE: *type*

**Explanation**
The SNMP agent has received an mkDPIset packet. The SNMP_TYPE is not supported.

**System action**
The SNMP agent stops processing the pDPIpacket. The SNMP agent continues.

**Operator response**
Contact the system programmer.

**System programmer response**
Determine the device that is sending the incorrect packets. View the device output to determine why it is sending packets with incorrect SNMP_TYPES. See z/OS Communications Server: IP Programmer's Guide and Reference for more information about the mkDPIset command.

**Module**
MKDPI

**Procedure name**
dpi_set_packet

**EZA6635E** mkDPIlist: Unknown SNMP_TYPE: *type*

**Explanation**
The SNMP agent has received an mkDPIlist packet. The SNMP_TYPE is not supported.
**System action**
The SNMP agent stops processing the pDPIpacket. The SNMP agent continues.

**Operator response**
Contact the system programmer.

**System programmer response**
Determine the device that is sending the incorrect packets. View the device output to determine why it is sending packets with incorrect SNMP_TYPEs. See z/OS Communications Server: IP Programmer's Guide and Reference for more information about the mkDPIlist command.

Chapter 9. EZA8xxxx messages

EZA8200I MVS TCP/IP Telnet version level

Explanation
You are running the indicated version of TCP/IP Telnet for MVS.

System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
TNTELP

Procedure name
ClearScreen

EZA8201I Telnet will allow you to log in to a remote host
EZA8202I machine. Note that the “remote” host may be the
EZA8203I same as your local host.
EZA8205I You may specify a remote host when invoking TELNET.
EZA8206I Otherwise, you will be prompted to enter one of the
EZA8207I following:
EZA8208I a remote host, “quit”, or “?” for assistance.
EZA8210I Specify the remote host either via an internet
EZA8211I host name, or via an internet address of the form
EZA8212I “nn.nn.nn.nn.”.
EZA8214I Once connected, follow the log in and usage procedures
EZA8215I of the remote host.
EZA8217I To invoke one of several TELNET commands, hit an
EZA8218I appropriate attention key:
EZA8219I In Transparent Mode -- PA1
EZA8220I In Line Mode -- any PFkey but PF 1,2,3, or 13,14,15
EZA8221I Then, enter any of the following commands:
EZA8222I Help or ? -- Receive (this) assistance
EZA8223I AYT -- Are You There?
EZA8224I  AO -- Abort Output
EZA8225I  BRK -- Break
EZA8226I  IP -- Interrupt Process
EZA8227I  PA1 -- Send PA1 key; ONLY if NOT in LIne Mode
EZA8228I  SYNCH -- Clear data path, except for TELNET commands
EZA8229I  Quit -- Quit the TELNET session
EZA8231I  If in Line Mode, the following PF settings are in force:
EZA8232I  PF1 or 13 -- Retrieve previous input line
EZA8233I  PF2 or 14 -- Scroll halfway up
EZA8234I  PF3 or 15 -- Turn off display of user-line; designed
to be used before entering password

Explanation
These messages are displayed when Help is invoked. This is displayed by typing a question mark (?) or Help at the command line.

System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
TNUTMAS

Procedure name
HelpMe

EZA8246E  Telnet terminated -- Connection closed

Explanation
The Telnet session has ended because of a connection state type of CONNECTIONclosing, SENDINGonly, or NONEXISTENT notification has been received.

System action
The Telnet connection ends. TCPIP continues.

Operator response
Reinitiate the Telnet connection if wanted.

System programmer response
No action is needed.
**Module**
TNUTMAS

**Procedure name**
UtEndTelnet

---

**EZA8247E**  
**Telnet terminated**

**Explanation**
The Telnet connection has been ended.

**System action**
The Telnet connection ends. TCPIP continues.

**Operator response**
Reinitiate the Telnet connection if wanted.

**System programmer response**
No action is needed.

---

**Module**
TNUTMAS

**Procedure name**
UtEndTelnet

---

**EZA8248E**  
**Port 'port number' invalid (out-of-range or not numeric.)**

**Explanation**
The port number specified in the port_number parameter of the TELNET command is incorrect. The port parameter indicates the port number to which you want to connect on the remote host. When connecting to a non-TELNET port, the data exchange must follow the protocol recognized by the other port. The default is well-known port 23.

**System action**
TCPIP continues.

**Operator response**
Check for the correct command syntax and port number and reissue the command. See the z/OS Communications Server: IP User’s Guide and Commands for more information.

**System programmer response**
No action is needed.
Procedure name
GetParameters

EZA8249I  Ignoring extraneous parameters after port

Explanation
Additional parameters have been entered after the port number parameter of the TELNET command. These parameters are unnecessary and are being ignored.

System action
TCPIP continues.

Operator response
Check for correct command syntax and try command again.

System programmer response
No action is needed.

Module
TNUTMAS

Procedure name
GetParameters

EZA8250I  Missing parm after TRANSLATE

Explanation
The data set name of the translation table for the TRANSLATE parameter is missing. This parameter specifies a nonstandard translation table file and can be declared as an option of the TELNET command.

System action
TCPIP continues.

Operator response
Enter the correct data set name and resubmit the command. See the z/OS Communications Server: IP User's Guide and Commands for more information.

System programmer response
No action is needed.

Module
TNUTMAS

Procedure name
GetParameters

EZA8251I  Invalid option “value” ignored
Explanation
An incorrect option in the TELNET command has been declared. This option is being ignored.

System action
TCPIP continues.

Operator response
Check for the correct command syntax and try the command again. See the z/OS Communications Server: IP User's Guide and Commands for more information.

System programmer response
No action is needed.

Module
TNUTMAS

Procedure name
GetParameters

EZA8252E  errmsg (msgnum)

Explanation
This message indicates the return code received after the BeginTcpIp or Handle procedure was unsuccessful. The BeginTcpIp procedure is used to inform the TCPIP address space that you want to start using its services. The Handle procedure is used to specify that you want to receive notifications in the given set. This procedure is called after BeginTcpIp and before accessing the TCPIP services.

errmsg is the text of the message that describes the error.

msgnum is the 4-digit numeric portion of the message identifier of the EZA message whose text is displayed in errmsg. For more information about this message, see message EZAmsgnum.

System action
TCPIP continues.

Operator response
Consult the system programmer.

System programmer response
Respond as indicated by the message EZAmsgnum.

Module
TNUTMAS

Procedure name
GetParameters

EZA8253I  Host "host ID" Unknown.
Explanation
The foreign host name specified in the foreign_host parameter of the TELNET command is incorrect or Telnet was not able to reach the destination. This parameter specifies the name or internet address of the local or remote host.

System action
TCPIP continues.

Operator response
Check the correct command syntax and host name and try the command again. See the z/OS Communications Server: IP User’s Guide and Commands for more information.

System programmer response
No action is needed.

Module
TNUTMAS

Procedure name
GetParameters

EZA8254I Enter foreign host (and optional port), “quit”, or “?” for help:

Explanation
The host parameter was not specified with the TELNET command. If you do not specify the name or internet address of the local or remote host, you are prompted for the remote host.

System action
TCPIP continues.

Operator response
Enter the local or remote host name and optional port number. See the z/OS Communications Server: IP User's Guide and Commands for more information.

System programmer response
No action is needed.

Module
TNUTMAS

Procedure name
UtStartTelnetInit

EZA8255E Cannot load translate table data set name; errmsg (msgnum)

Explanation
The data set name specified in the data set name option of the TRANSLATE parameter of the TELNET command is incorrect. This data set name specifies the name of a nonstandard translation table.
errmsg is the text of the message that describes the error.
msgnum is the 4-digit numeric portion of the message identifier of the EZA message whose text is displayed in errmsg. For more information about this message, see message EZAmsgnum.

**System action**
The Telnet connection ends. TCPIP continues.

**Operator response**
Check for the correct translation data set name, reinitiate the Telnet connection and resubmit the command. See the z/OS Communications Server: IP User's Guide and Commands for more information.

**System programmer response**
Respond as indicated by the message EZAmsgnum.

**Module**
TNUTMAS

**Procedure name**
UtStartTelnetInit

**EZA8256I** Connecting to remote host, port port number

**Explanation**
A connection has been initiated between the server and the indicated remote host. This message also indicates the port number for which the connection has been opened on the remote host.

**System action**
TCPIP continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
TNUTMAS

**Procedure name**
UtStartTelnetInit

**EZA8259E** Waiting for TCP connection resources. Use ATTN to quit.

**Explanation**
The procedure TcpWaitOpen, which initiates a TCP connection, returned a ZEROresources return code. ZEROresources means that TCP cannot handle any more connections at this time. Since the current application does not handle RESOURCESAvailable notifications and the TcpWaitOpen procedure returned a ZEROresources return code, the connection is ended. The RESOURCESAvailable notifications can be declared in the Notifications
record. This notification is sent only if a previous TcpOpen or TcpWaitOpen returned ZEROresources. This message is displayed with EZA8260E.

**System action**
The Telnet connection ends. TCPIP continues.

**Operator response**
Reinitiate the Telnet connection.

**System programmer response**
No action is needed.

**Module**
TNUTMAS

**Procedure name**
UtStartTelnetInit

**EZA8260E errmsg (msgnum)**

**Explanation**
This message displays the return code received after a connection has ended. This message is displayed with EZA8259E.

*errmsg* is the text of the message that describes the error.

*msgnum* is the 4-digit numeric portion of the message identifier of the EZA message whose text is displayed in *errmsg*. For more information about this message, see message EZA*msgnum*.

**System action**
The Telnet connection ends.

**Operator response**
No action is needed.

**System programmer response**
Respond as indicated by the message EZA*msgnum*.

**Module**
TNUTMAS

**Procedure name**
UtStartTelnetInit

**EZA8261I Quitting...bye**

**Explanation**
An external interrupt notification has been received by the server to stop the Telnet connection. An EXTERNALinterrupt notification is given when a simulated external interrupt occurs in your address space.
**EZA8262I **  
**errmsg (msgnum)**

**Explanation**
This message indicates the return code received after the Telnet connection has ended. 
**errmsg** is the text of the message that describes the error.

**msgnum** is the 4-digit numeric portion of the message identifier of the EZA message whose text is displayed in **errmsg**. For more information about this message, see message EZA**msgnum**.

**System action**
The Telnet connection ends.

**Operator response**
Notify the system programmer of the message.

**System programmer response**
Respond as indicated by the message EZA**msgnum**.

**Module**
TNUTMAS

**Procedure name**
UtStartTelnetInit

---

**EZA8263E ** **TELNET requires a 327x-type terminal**

**Explanation**
The terminal type currently being used is not one supported by the Telnet protocol. The TELNET command supports IBM 3270-type display stations. Examples of supported display stations are:

- IBM 3178 Display Station
- IBM 3179 Display Station
- IBM 3180 Display Station
- IBM 3191 Display Station
- IBM 3192 Display Station
IBM 3193 Display Station
IBM 3194 Display Station
IBM 3275 Display Station Model 2
IBM 3276 Control Unit Display Station Models 2, 3, and 4
IBM 3277 Display Station Model 2
IBM 3278 Display Station Models 2, 3, 4, and 5
IBM 3279 Color Display Station Models 2 and 3.

System action
The Telnet connection ends.

Operator response
Run a 3270 type terminal emulator or use a 3270 type display station.

System programmer response
No action is needed.

Module
TNUTMAS

Procedure name
UtStartTelnetInit

EZA8265I Using Line Mode...

Explanation
The line mode parameter has been specified for the TELNET command. The LINEMODE parameter indicates the logon operation. In line mode, the remote host's output is displayed on the screen one line at a time, without full-screen capabilities.

System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
TNUTMAS

Procedure name
UtFinishTelnetInit

EZA8267I Notes on using Telnet when in Line Mode;
EZA8268I - To hide Password, Hit PF3 or PF15
EZA8269I - To enter Telnet Command, Hit PF14-12, or PF16-24
Explanation
These messages provide information about Telnet when the LINEMODE parameter for the TELNET command has been specified.

System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
TNUTMAS

Procedure name
UtFinishTelnetInit

EZA8270I Using Transparent Mode...

Explanation
The transparent mode of operation is the default for the TELNET command. When in transparent mode, the remote host's full-screen capabilities are functional on the local terminal.

System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
TNUTMAS

Procedure name
UtFinishTelnetInit

EZA8272I Notes on using Telnet when in Transparent Mode;
EZA8273I - To enter Telnet Command, Hit PA1

Explanation
These messages provide information about using Telnet when the transparent mode has been specified in the TELNET command.
System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
TNUTMAS

Procedure name
UtfinishTelnetInit

EZA8275I  **** Telnet: Internal consistency failure;
EZA8276I  message

Explanation
The procedure UtMustHave, which checks that a given internal consistency condition exists, was unsuccessful. This message displays the condition associated with this procedure.

Although these messages will be displayed on the console without the message number, the following table lists the message numbers. See those messages for more information.

EZA8277I CallTcpSend: errmsg (msgnum)

Explanation
This message is displayed after an unsuccessful attempt to start a Telnet session. This message is displayed with EZA8246E.

errmsg is the text of the message that describes the error.

msgnum is the 4-digit numeric portion of the message identifier of the EZA message whose text is displayed in errmsg. For more information about this message, see message EZAmsgnum.

System action
TCPIP continues.

Operator response
Inform the system programmer of this message.

System programmer response
Respond as indicated by the message EZAmsgnum.

Module
TNUTMAS

Procedure name
CallTcpSend

EZA8278I UtGetBuffSpace: Bad ReturnCode.

Explanation
The procedure UtGetBuffSpace, which is called when a TcpSend is unsuccessful due to insufficient buffer space, has been initialized. This procedure also receives notes from the notification list until it finds a BUFFERspaceAVAILABLE note. A BUFFERspaceAVAILABLE notification is given when space becomes available on a connection. This message is displayed with EZA8246E.
**System action**
The Telnet connection ends.

**Operator response**
Reinitiate the Telnet connection.

**Procedure name**
MainLoop

**EZA8318I** UrgentMode

1036  z/OS Communications Server: IP Messages: Volume 1 (EZA)
Explanation
Urgent mode has been initiated. When in urgent mode, the data stream is immediately scanned for attention signals. These signals are used to invoke special handling of the data stream by the process that receives it.

System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
TNUTMAS

Procedure name
MainLoop

EZA8319I  got EXTERNALinterrupt: code

Explanation
An EXTERNAL interrupt notification has been received. This notification is given when a simulated external interrupt occurs in your address space.

System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
TNUTMAS

Procedure name
MainLoop

EZA8320I  MainLoop: Bad notification: notification

Explanation
The procedure MainLoop, which processes data from the user to the Telnet server, was unsuccessful because of an incorrect notification received. This message displays the notification name. This message is displayed with EZA8246E.
**System action**
TCPIP continues.

**Operator response**
This message should be preceded by more specific error messages.

**System programmer response**
No action is needed.

**Module**
TNUTMAS

**Procedure name**
MainLoop

---

**EZA8321I**   in UtEndTelnet

**Explanation**
The procedure UtEndTelnet, which ends the user’s Telnet connection, turns off the full-screen services, and shuts down the TCP connection, has been initiated.

**System action**
TCPIP continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
TNUTMAS

**Procedure name**
UtEndTelnet

---

**EZA8322I**   Session ended. <ENTER> to return to TSO

**Explanation**
The Telnet connection has ended. To return to the time sharing option (TSO) environment, press the ENTER key.

**System action**
The Telnet connection ends. TCPIP continues.

**Operator response**
Press the ENTER key.
System programmer response
No action is needed.

Module
TNUTMAS

Procedure name
UtEndTelnet

EZA8323I  UtEndTelnet: Bad TurnCode from GetNextNote.

Explanation
The UtEndTelnet procedure, which stops a Telnet connection, received an incorrect return code from GetNextNote. The GetNextNote procedure gets the next notification off the notification queue. This message is displayed with EZA8246E.

System action
The Telnet connection is ended. TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
TNUTMAS

Procedure name
UtEndTelnet

EZA8324I  Using TCPIPTES...

Explanation
The test option has been specified for the NETSTAT command. This command provides information about the status of the local host. The TEST option displays detailed information about the TCPIPTES address space. You can use the TEST parameter in conjunction with any other NETSTAT parameter to display information about the specified TCPIPTES address space.

System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.
Module
TNUTMAS

Module
TNTOUSE

Procedure name
IacScan

EZA8343I   NewLineRead: bad line feed state.

Explanation
Telnet issues this message while in line (non-transparent) mode. An incorrect line feed state was recognized while attempting to read the line feed set sequence. This message is displayed with EZA8246E.

System action
TCPIP continues.

Operator response
Submit a valid LfSet sequence in the data set to declare a new line.

System programmer response
No action is needed.

Module
TNTOUSE

Procedure name
CheckForNeedToSuspend.

EZA8344I   NewLineRead: bad line feed state.

Explanation
Telnet issues this message while in line (non-transparent) mode. An incorrect line feed state was recognized while attempting to read the carriage return set sequence. This message is displayed with EZA8246E.

System action
TCPIP continues.

Operator response
Submit a valid CrSet sequence in the data set to declare a new line.

System programmer response
No action is needed.
Module
TNTOUSE

Procedure name
CheckForNeedToSuspend

EZA8345I in TelnetRead

Explanation
Telnet issues this message while tracing is on. The Telnet command, which was indicated by the presence of an Interpret As Command (IAC) character, is now being read.

System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
TNTOUSE

Procedure name
TelnetRead

EZA8346I TelnetRead: Excepting IACnv.

Explanation
Telnet issues this message while tracing is on. The client is now scanning for an Interpret As Command (IAC) character. This message is displayed with EZA8246E.

System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
TNTOUSE

Procedure name
TelnetRead

EZA8347I TelnetRead: urgent bytes went below 0 before DM
**Explanation**
Telnet issues this message while tracing is on. The data submitted containing urgent bytes have been exhausted before the data mark. This message is displayed with EZA8246E.

**System action**

TNTOUSE
Procedure name
TelnetRead

EZA8354I  TelnetRead: urgent byes went below 0 before DM

Explanation
Telnet issues this message while in urgent mode. While scanning for the end of the Telnet command, the data containing urgent bytes was exhausted before detecting a data mark. This message is displayed with EZA8246E.

System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
TNTOUSE

Procedure name
TelnetRead

EZA8355I  TelnetRead: Length of subnegotiation too long

Explanation
Telnet issues this message while scanning for the end of the Telnet subnegotiations. Instead of a subnegotiation end command, an Interpret As Command (IAC) character was detected. This message is displayed with EZA8246E.

System action
TCPIP continues.

Operator response
Resubmit the Telnet command subnegotiations.

System programmer response
No action is needed.

Module
TNTOUSE

Procedure name
TelnetRead

EZA8356I  TelnetRead: Bad subnegotiation sent.
Explanation
Telnet issues this message to indicate that it has received an incorrect subnegotiation packet from the other side of the connection. This message is displayed with EZA8246E.

System action
TCPIP continues.

Operator response
Resubmit the Telnet command.

System programmer response
No action is needed.

Module
TNTOUSE

Procedure name
TelnetRead

EZA8357I   TelnetRead: Bad UnderstandingState.

Explanation
The Telnet server has received an incorrect message while expecting either subnegotiation commands or Interpret As Command (IAC) character. This message is displayed with EZA8246E.

System action
TCPIP continues.

Operator response
Check client machine for the syntax of the command being submitted.

System programmer response
No action is needed.

Module
TNTOUSE

Procedure name

TCPIP continues.

**Operator response**
If you do not want the connection to close, reestablish your connection.
System programmer response
No action is needed.

Module
various.

Procedure name
various.

EZA8523I Invalid length specified

Explanation
A parameter was of an incorrect length for the remote site.

System action
TCPIP continues.

Operator response
Reissue your command with a valid parameter length specified. This error should never occur for SMTP or the FTP Server. If it does occur, this indicates that there might be an error with SMTP or the FTP Server code. If this is the case, refer the error to the system programmer or the IBM Software Support Center.

System programmer response
Parse the SMTP or the FTP Server code with trace on for the specific application where the error occurred. Look for any indications of possible errors and correct them. Recompile after any corrections are made and test the application through TCPIP.

Module
various.

Procedure name
various.

EZA8524I Cannot send data

Explanation
The FTP Server did not acknowledge receipt of the data sent. In the case of Telnet, this message indicates that the Telnet server could not send the function StKillConn, which closes connections, to the connection indicated in a previous message. A message following this one indicates that there is no such connection and shutdown continues.

System action
TCPIP continues. The calling program continues.

Operator response
This error should never occur in the case of FTP. If it does, this indicates that there might be an error with the FTP Server FTP code. If this is the case, refer the error to the system programmer or the IBM Software Support Center. In the case of the Telnet server, check the connection number indicated in the previous message to determine the problem. If the connection indicated is OK then the problem could be with the server code. If so, refer this problem to the IBM Software Support Center.
System programmer response
Assist the operator as required.

Module
various.

Explanation
A connection to the server already exists. The request is ignored by the server.

System action
TCP/IP continues. The calling program continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
various.
EZA8527I  Destination address is unreachable

Explanation
The address that you specified is unreachable. This occurs as a result of errors from the remote site. Connection to the remote site is not established.

System action
TCPIP continues.

Operator response
Contact the remote site administrator for assistance.

System programmer response
No action is needed.

EZA8528I  Error in profile data set. Details are in PROFILE.TCPIP or the //SYSERROR DD file. Expansion may be necessary.

Explanation
There is an error in the hlq..PROFILE.TCPIP data set.

System action
TCPIP continues.

Operator response
Open the hlq..PROFILE.TCPIP data set, or the data set pointed to by the //SYSERROR DD statement in the TCPIP JCL procedure. Respond to the details provided in the data set.

System programmer response
Assist the operator as required.

EZA8529I  Fatal inter-address communications error VMCF RC=number User=lastuser
Explanation
The Virtual Machine Communication Facility "VMCF" encountered a network pacing response code. The VMCF return codes below describe the different types of error conditions that may cause the fatal inter-address communication error.

Return Code  
Cause

1  
Invalid virtual buffer address

2  
Invalid subfunction code

3  
Protocol violation

4  
Source machine not authorized

5  
TCPJobname user not available

6  
Protection violation

7  
Sendx data too large

9  
Target machine in quiesce state

10  
Message limit exceeded

11  
REPLY canceled

12  
Message not found

13  
Synchronization error

15  
Paging I/O error

16  
Incorrect length

17  
Destructive overlap

18  
User not authorized for PRIORITY message.

19  
Data transfer error

20  
CANCEL - busy

System action
TCPIP halts.

Operator response
Tell the system programmer the VMCF communication error encountered.
System programmer response

Use the return code displayed in the list of error responses to determine the cause of the error.

If the return code=5, verify that the TCPIPJOBNAME is correctly specified in the TCPIP.DATA data set. Ensure that you are using the correct TCPIP.DATA data set.

For other return codes, correct the error using the different resources stated below that may apply to the error condition specified. Once the error is corrected restart TCP/IP. For more information on the VMCF facility and return codes see the z/OS Communications Server: IP Sockets Application Programming Interface Guide and Reference. For information on configuring the TCPIP.DATA for the VMCF, see the z/OS Communications Server: IP Configuration Reference. If the error is beyond the scope of these resources, contact the IBM Software Support Center.

Module

various

Procedure name

various

EZA8530I No password in RACF directory

Explanation

The password entered does not exist in the RACF directory.

System action

TCPIP continues. Connection to the remote host ends.

Operator response

Check the password and syntax and make sure that it is a valid password and try your request again.

System programmer response

Help the user update their password in the RACF directory if required.

Module

various

Procedure name

various

EZA8531I TCPIP not authorized to access dataset

Explanation

The specific data set requested through TCPIP is not accessible; the user is not authorized.

System action

TCPIP continues. The application continues.

Operator response

To access the data set you must be authorized by the remote site. Check with your system administrator to authorize your user ID to have access to the data set on the FTP server.
System programmer response
Assist the operator as required.

Module
various.

Procedure name
various.

**EZA8532I Invalid request**

Explanation
The FTP server has received an incorrect request from TCPIP.

System action
TCPIP halts. The calling program halts.

Operator response
This error should never occur. If it occurs it indicates an error with the server FTP code itself. Refer this error to the system programmer or the IBM Software Support Center.

System programmer response
Parse the code with trace on for the specific application where the error occurred. Look for any indications of possible errors and correct them. Recompile after any corrections are made and test the application through TCPIP.

Module
various.

Procedure name
various.

**EZA8534I Invalid virtual address**

Explanation
The virtual address specified to TCPIP is not valid. No connection is made to the remote host.

System action
TCPIP continues.

Operator response
Check to make sure that you entered a valid virtual address defined in the remote system. Call the remote system administrator for assistance.

System programmer response
Assist the operator as required.
**Module**
various.

**Procedure name**
various.

**EZA8535I** You aborted the connection

**Explanation**
You either intentionally or unintentionally abended the connection to the remote host.

**System action**
TCPIP continues. The remote host connection is abended.

**Operator response**
Reinitialize the connection to the remote host.

**System programmer response**
Assist the operator as required.

**Module**
various.

**Procedure name**
various.

**EZA8536I** The requested local port is not available

**Explanation**
The local port on which TCPIP has been accessed is not available.

**System action**
TCPIP halts.

**Operator response**
Wait several minutes or until TCPIP has been restarted. You should receive a second message after attempting to use TCPIP that reads, TCPIP has been restarted...for some reason or other, when TCPIP becomes available.

**System programmer response**
No action is needed.

**Module**
various.

**Procedure name**
various.

**EZA8537I** Data set is in use by someone else and cannot be accessed

EZA8xxxx messages 1069
**Explanation**
The data set requested through TCPIP is in use by someone else and is not accessible at this time.

**System action**
TCPIP continues. The calling program continues.

**Operator response**
Wait a few minutes until the data set becomes available and reissue your request.

**System programmer response**
No action is needed.

**Module**
various.

**Procedure name**
various.

---

**EZA8538I  Data set not available**

**Explanation**
The data set requested is not available. It is either in use or inaccessible.

**System action**
TCPIP continues. The calling program continues.

**Operator response**
Wait a reasonable amount of time and try accessing the data set again. If you are not successful after several tries, contact the system programmer or the IBM Software Support Center.

**System programmer response**
Assist the operator as required.

**Module**
various.

**Procedure name**
various.

---

**EZA8540I  The foreign host has closed this connection**

**Explanation**
The remote host has closed this connection.

**System action**
TCPIP continues. The host is unsuccessful.
Operator response
Wait until the remote host is ready and reissue the connection to the remote host.

System programmer response
No action is needed.

Module
various.

Procedure name
various.

EZA8541I The internet address is not local to this host

Explanation
The host address entered though TCPIP is not local to this host. This host address verification is part of the virtual machine communication facility (VMCF) used within the MVS system. Connection to the remote host is unsuccessful.

System action
TCPIP continues.

Operator response
Check the host address entered and verify that it is correct. If it is, then it has to be updated in your VMCF data set.

System programmer response
No action is needed.

Module
various.

Procedure name
various.

EZA8542I No outstanding notifications

Explanation
There is an error in the application program code itself. The application will halt. The application could include, but is not limited to; SMTP, FTP server, LPD.

System action
TCPIP continues. The calling program halts.

Operator response
Reinitialize your connection and the application program. If the problem persists, contact the system programmer or the IBM Software Support Center.
System programmer response
Parse the code with trace on for the application code. Look for any indications of possible errors and correct them. Recompile after any corrections are made and test the application program.

Module
various.

Procedure name
various.

EZA8543I  No such connection

Explanation
The connection you attempted to query or use does not exist. For the Telnet server, this indicates that the function StKillConn which was called to close a connection was unsuccessful because the connection could not be found.

System action
TCPIP continues. In the case of the Telnet server, this message is ignored and shutdown procedures continue.

Operator response
In most cases you can try your request again using the correct spelling and syntax for the remote address to correct the error. For the Telnet server see other messages that appear with this one for more information. If the error persists, contact the IBM Software Support Center.

System programmer response
Assist the operator as required.

Module
various.

Procedure name
various.

EZA8544I  No TCP/IP service available

Explanation
TCPIP is not available.

System action
TCPIP halts.

Operator response
Wait until TCPIP becomes available and try your request again.

System programmer response
No action is needed.
**EZA8545I**  Not yet begun TCP/IP service

**Explanation**
TCPIP is not available.

**System action**
TCPIP halts.

**Operator response**
Wait until TCPIP resumes service or reinitialize TCPIP.

**System programmer response**
No action is needed.

---

**EZA8546I**  The connection is not yet open

**Explanation**
This error should never occur. If it does it means that there is an error with the specific application code itself. Affected applications include, but are not limited to, SMTP and FTP server.

**System action**
TCPIP continues. The calling program continues.

**Operator response**
Report this error to the system programmer or the IBM Software Support Center.

**System programmer response**
Parse the code with trace on for the application code. Look for any indications of possible errors and correct them. Recompile after any corrections are made and test the application program.

---

**EZA8547I**  Foreign host rejected the open attempt
Explanation
The remote host that you attempted to connect to has rejected the open attempt.

System action
TCPIP continues. The connection to the remote host is abended.

Operator response
This error occurs on the remote site. Contact the site and reissue your open attempt when their system clears up.

System programmer response
No action is needed.

Module
various.

Procedure name
various.

EZA8548I  TcpOpen error: invalid local address

Explanation
The local address that you attempted to use for a communication channel is not valid. The attempted connection is not established.

System action
TCPIP continues.

Operator response
This error should not occur. If the error does occur, it implies an error with the application code itself. Refer the error to the system programmer or the IBM Software Support Center.

System programmer response
Parse the code with trace on for the application code. Look for any indications of possible errors and correct them. Recompile after any corrections are made and test the application program. Check the address and syntax and reissue your connection attempt. If the problem persists, contact your system administrator to verify the local address or the IBM Software Support Center for help in debugging the code.

Module
various.

Procedure name
various.

EZA8549I  TcpOpen error: invalid Initial state

Explanation
You need to specify whether you are initiating a TCPIP connection in a passive or active state. It could also indicate that there is an error with the application (FTP server, SMTP) code itself.
**System action**
The connection is not established.

**Operator response**
Reissue the connection indicating whether it will be a passive or active connection. If the problem exists in the application code itself, refer this error to the system programmer or the IBM Software Support Center.

**System programmer response**
Parse the code with trace on for the application code. Look for any indications of possible errors and correct them. Recompile after any corrections are made and test the application program.

**Module**
various.

**Procedure name**
various.

**EZA8550I Invalid timeout parameter**

**Explanation**
The timeout parameter is used for the PING function when accessing a remote host. PING will return with a message that states that the remote host is not responding if after a few moments it receives no responses from the remote host. In the case of FTP server and SMTP, this could indicate an error with the application code itself.

**System action**
TCPIP continues. The connection is not established.

**Operator response**
If the error occurred as result of the PING function, then wait until the host responds or call the remote host's system administrator to find out the status of the host. In the case of FTP server and SMTP, refer the error to the system programmer or the IBM Software Support Center.

**System programmer response**
Parse the code with trace on for the application code. Look for any indications of possible errors and correct them. Recompile after any corrections are made and test the application program.

**Module**
various.

**Procedure name**
various.

**EZA8551I TcpOpen error: unspecified foreign address in active open**

**Explanation**
Indicates, in the case of the TCP engine, that the host address has not been specified in your open attempt. In the case of FTP and SMTP, this error indicates that there might be a problem with the application code itself. The connection is not established.
System action
TCPIP continues.

Operator response
Specify a valid host address when issuing a socket request. If the error persists, verify the address with the other host's administrator. If the error occurred within the FTP or SMTP function, refer this error to the system programmer or the IBM Software Support Center.

System programmer response
Parse the code with trace on for the application code. Look for any indications of possible errors and correct them. Recompile after any corrections are made and test the application program.

Module
various.

Procedure name
various.

EZA8552I    TcpOpen error: unspecified foreign port in active open

Explanation
The host port has not been specified in your open attempt. In the case of FTP and SMTP, this error indicates that there might be a problem with the application code itself.

System action
TCPIP continues. The program halts.

Operator response
Specify a valid host port when issuing a socket request. If the error persists, verify the address with the other host's administrator. If the error occurred within the FTP or SMTP function, refer this error to the system programmer or the IBM Software Support Center.

System programmer response
Parse the code with trace on for the application code. Look for any indications of possible errors and correct them. Recompile after any corrections are made and test the application program.

Module
various.

Procedure name
various.

EZA8553I    TCPIP cannot read profile data set

Explanation
TCPIP cannot access or read your hlq.PROFILE.TCPIP data set.

System action
TCPIP continues.
Operator response
Make sure that your hlq.PROFILE.TCPIP data set is accessible by TCPIP. If it is and you are still experiencing this error, open the data set and check the contents to make sure that the information is correct and complete and that the information in the data set is not damaged. For more information about the hlq.PROFILE.TCPIP data set, see z/OS Communications Server: IP Configuration Reference.

System programmer response
No action is needed.

Module
various.

Procedure name
various.

EZA8554I   Receive still pending on this connection

Explanation
No data has been received on the specified connection. In the case of the FTP server and SMTP, this message could indicate a problem with the code itself.

System action
TCPIP continues.

Operator response
If the error specified is from any application other than the FTP server or SMTP, wait for data or ask the remote site to send you an acknowledgment packet to test your connection. If the error is the SMTP or the FTP server code, refer this error to the system programmer or the IBM Software Support Center.

System programmer response
Parse the code with trace on for the application code. Look for any indications of possible errors and correct them. Recompile after any corrections are made and test the application program.

Module
various.

Procedure name
various.

EZA8555I   Foreign host unexpectedly closed the connection

Explanation
The remote host has closed the connection, for the specified application, without notice or acknowledgment.

System action
TCPIP continues. The program halts.
Operator response
This message occurs as a result of a problem with the remote host. Reinitialize your connection or call the system administrator for the remote host for assistance.

System programmer response
No action is needed.

Module
various.

Procedure name
various.

EZA8556I Foreign host aborted the connection

Explanation
The other host has abended the connection. This could indicate a connection reset at the other host. This could also apply to your Offload device.

System action
TCPIP continues. The program halts or is disconnected.

Operator response
In the case of the Offload device, reinitialize the connection from the Offload device. In any other application, contact the other host's administrator to reset their host or determine if there are other problems on their end causing this error.

System programmer response
No action is needed.

Module
various.

Procedure name
various.

EZA8557I Software error in TCP/IP!

Explanation
TCPIP cannot continue because of an error in TCPIP itself.

System action
TCPIP halts.

Operator response
Wait a few moments until TCPIP restarts. If after a reasonable amount of time TCPIP does not restart, contact your system administrator.
System programmer response
No action is needed.

Module
various.

Procedure name
various.

EZA8558I  TCP/IP service is being shut down

Explanation
TCP/IP is being shut down either manually or due to a problem with the application connection.

System action
TCP/IP halts.

Operator response
Wait a few moments until TCPIP restarts. If after a reasonable amount of time TCPIP does not restart, contact your system administrator.

System programmer response
No action is needed.

Module
various.

Procedure name
various.

EZA8559I  Foreign host is no longer responding

Explanation
The connection to the other host has not responded within a certain time threshold.

System action
TCP/IP continues. The connection to the remote host abends.

Operator response
Wait a few moments until TCPIP restarts. If after a reasonable amount of time TCPIP does not restart, contact the other host's system administrator.

System programmer response
No action is needed.

Module
various.
EZA8560I Foreign host did not respond within OPEN timeout

Explanation
The open attempt to the other host has not responded within a certain time threshold. The connection to the remote host is not established.

System action
TCPIP continues.

Operator response
Wait a few moments until TCPIP restarts. If after a reasonable amount of time TCPIP does not restart, contact the other host’s system administrator.

System programmer response
No action is needed.

Module
various.

Procedure name
various.

EZA8561I Too many open connections already exist

Explanation
The host connection that you are attempting to establish a connection with already has too many open connections. The connection is not established.

System action
TCPIP continues.

Operator response
Contact the other host's administrator to determine the availability of their system.

System programmer response
No action is needed.

Module
various.

Procedure name
various.

EZA8563I Permission is denied
Explanation
The error might be caused by one of the following reasons:
• Not being APF-authorized to use the RAW IP interface
• A Firewall access failure
• A network access failure

System action
The command is not performed and TCPIP continues.

Operator response
Contact your system administrator to gain access to the specific application that you are attempting use.

System programmer response
No action is needed.

Module
various.

Procedure name
various.

EZA8564I Foreign host violated the connection protocol

Explanation
The other host has sent data that does not conform to the connection protocol.

System action
TCPIP continues. The program halts or the connection is abended.

Operator response
This error arises as a problem at the remote site. Wait until the problem clears or contact the remote site system administrator.

System programmer response
No action is needed.

Module
various.

Procedure name
various.

EZA8565I Unimplemented TCP/IP request

Explanation
TCPIP has received a request for a function that has not been implemented.
System action
TCPIP continues.

Operator response
If the specified request should be implemented in TCPIP, contact the system programmer or administrator.

System programmer response
If the request should be updated in your hlq.PROFILE.TCPIP data set, open the data set, set up the specified request in the proper area of the data set and reinitialize TCPIP. For more information about the hlq.PROFILE.TCPIP data set see z/OS Communications Server: IP Configuration Reference.

Module
various.

Procedure name
various.

EZA8566I Destination host is not known

Explanation
The host address that you are attempting to reach is not known.

System action
TCPIP continues. The program halts or the connection is not established.

Operator response
Check the address and make sure you used the proper syntax and that the address exists for the remote host that you are attempting to reach. If the problem persists, contact the remote host administrator.

System programmer response
No action is needed.

Module
various.

Procedure name
various.

EZA8567I Destination network is unreachable

Explanation
The network address that you entered is an unreachable network address.

System action
TCPIP continues. The program or the connection abends.
Operator response

Check that the IP addresses are correct in the hlq.PROFILE.TCPIP data set. Use the BEGINROUTES statement to add the destination to the configuration data set if necessary. See the z/OS Communications Server: IP Configuration Reference for more information about the BEGINROUTES statement.

System programmer response

No action is needed.

Module

various.

Procedure name

various.

EZA8568I  Unspecified connection

Explanation

In the case of SMTP and FTS server, this could indicate an error with the code itself. The connection is not established.

System action

TCPIP continues.

Operator response

If the error specified is from any application other than the FTP server or SMTP, wait for data or ask the remote site to send you an acknowledgment packet to test your connection. If the error is with the SMTP or the FTP server code, refer this error to the system programmer or the IBM Software Support Center.

System programmer response

Parse the code with trace on for the application code. Look for any indications of possible errors and correct them. Recompile after any corrections are made and test the application program.

Module

various.

Procedure name

various.

EZA8569I  Client address space has too little storage

Explanation

The virtual storage of a client address is too small for TCPIP to continue processing.

System action

TCPIP halts.

Operator response

Wait until TCPIP resumes. If TCPIP does not resume, contact the system programmer or the IBM Software Support Center.
System programmer response
Increase the virtual storage for client.

Module
various.

Procedure name
various.

EZA8570I Foreign host disagreed on security or precedence

Explanation
The other host has rejected the connection because of discrepancies in either the security or precedence of the open attempt.

System action
TCPIP halts. The calling program halts.

Operator response
This error should never occur. If it does it indicates an error with the server FTP code itself. Refer this error to the system programmer or the IBM Software Support Center.

System programmer response
Parse the code with trace on for the specific application where the error occurred. Look for any indications of possible errors and correct them. Recompile after any corrections are made and test the application through TCPIP.

Module
various.

Procedure name
various.

EZA8571I No local X.25 virtual circuits available

Explanation
There are no available X.25 virtual circuits for access. This error results from problems at the remote site.

System action
TCPIP continues. The program halts or the connection is not established.

Operator response
Wait until the problem clears, or call the remote site administrator for assistance.

System programmer response
No action is needed.
Module
various.

Procedure name
various.

EZA8575I Client has ended TCP/IP service

Explanation
The client has ended TCP/IP either intentionally or unintentionally.

System action
TCP/IP continues. The connection abended.

Operator response
This error occurs from the client site. Wait until they restart TCP/IP or call the site administrator for assistance.

System programmer response
No action is needed.

Module
various.

Procedure name
various.

EZA8576I TCP cannot handle any more connections now

Explanation
TCP/IP has no more resources available to handle new connections. This is usually a problem with the remote site not having enough resources available to handle your connection request. In the case of the TCP/IP engine, this could indicate the address was not specified or there is not enough room in the TRANSLATE table in your hlq.PROFILE.TCPIP data set. A connection is not established.

System action
TCP/IP continues.

Operator response
If the problem is with the remote site, wait until a connection becomes available. If the problem is with the engine, either add the address to your TRANSLATE table or make room for the address in your hlq.PROFILE.TCPIP data set. For more information about the TRANSLATE table and the hlq.PROFILE.TCPIP data set, see z/OS Communications Server: IP Configuration Reference.

System programmer response
No action is needed.

Module
various.
**EZA8577I**  Invalid local address for UDP

**Explanation**  
The local address specified through UDP is not valid. A connection is not established.

**System action**  
TCPIP continues.

**Operator response**  
Verify that the address exists for UDP. Check your address for any syntax errors and try your address again. If you continue to experience problems, contact the IBM Software Support Center.

**System programmer response**  
No action is needed.

---

**EZA8579I**  Address unspecified when specification necessary

**Explanation**  
The connection you attempted to access through UDP requires that you specify a valid address. A connection is not established.

**System action**  
TCPIP continues.

**Operator response**  
Check the syntax and the address. Make sure you specify an address as required by UDP connections and reissue your connection request.

**System programmer response**  
No action is needed.

---

**EZA8580I**  Port unspecified when specification necessary
**Explanation**
The connection you attempted to access through UDP required that you specify a valid port. A connection is not established.

**System action**
TCPIP continues.

**Operator response**
Check the syntax of your connection request. Make sure that you specify a port as required for UDP connections and reissue your connection.

**System programmer response**
No action is needed.

**Module**
various.

**Procedure name**
various.

---

**EZA8582I**  
**FSend still pending on this connection**

**Explanation**
There is already an FSEND (file in send status) function pending on the connection you are attempting to use.

**System action**
TCPIP continues.

**Operator response**
The problem might be with the remote host. Call the system administrator at the remote host for assistance or wait until the current FSEND clears and reissue your request.

**System programmer response**
No action is needed.

**Module**
various.

**Procedure name**
various.

---

**EZA8583I**  
**Message from MVS host to S1 is too large**

**Explanation**
The Series1 processor received a message from the MVS host system that is too large to process. The message is dropped.
**System action**
TCPIP continues.

**Operator response**
Resend the message using smaller packets of data or decrease the size of the message.

**System programmer response**
No action is needed.

**Module**
TO18S1P

**Procedure name**
To1822S1RuptHandler

**EZA8584I**  IO write error on the 370 Channel

**Explanation**
TCPIP has encountered an IO error on a System370 channel.

**System action**
TCPIP continues.

**Operator response**
Check the channel adapter for the 1822 interface and make sure that all connections are attached correctly. Also make sure that the hardware is switched on and is online. If you continue to receive this error, check your hardware maintenance guide for more troubleshooting information.

**System programmer response**
No action is needed.

**Module**
various.

**Procedure name**
various.

**EZA8585I**  Obtained unknown sense data

**Explanation**
TCPIP does not recognize the data sent to or from the 1822 Series1 device.

**System action**
TCPIP continues.
**Operator response**

If this error persists, check your connections and make sure that they are properly attached. It might be necessary to shut down the device and restart the device to synchronize the connection. Check your hardware maintenance manual for more assistance.

**System programmer response**

Assist the operator as required.

**Module**

*various.*

**Procedure name**

*various.*

---

**EZA8591I  Series/1 processor is unavailable**

**Explanation**

TCPIP is getting device errors from the Series/1 channel because the Series/1 processor is either shut down or offline. The connection to the Series/1 is abended.

**System action**

TCPIP continues.

**Operator response**

Make sure all the connections to the Series/1 are properly attached. Shut down and restart the device if necessary.

**System programmer response**

Assist the operator as required.

**Module**

*various.*

**Procedure name**

*various.*

---

**EZA8592I  Interface Message Processor is unavailable**

**Explanation**

The 1822 Interface Message Processor (IMP) is not ready or offline. The IMP is down.

**System action**

TCPIP continues.

**Operator response**

Check your hardware connections and make sure that they are properly attached. Also make sure that the device is online. Restart the device if necessary. If the problem persists, consult your hardware manual for more troubleshooting information.
System programmer response
Assist the operator as required.

Module
various.

Procedure name
various.

EZA8593I Foreign host is dead or unreachable

Explanation
The other host cannot be reached by TCPIP either because the other host is shut down or the first hop address or network address is not valid.

System action
TCPIP continues.

Operator response
Check the BEGINROUTES statement in your hlq.PROFILE.TCPIP data set and make sure that the first hop and network addresses for the other host are defined correctly. For more information about the BEGINROUTES statement see z/OS Communications Server: IP Configuration Reference.

System programmer response
Assist the operator as required.

Module
various.

Procedure name
various.

EZA8594I More than 8 outstanding messages to that host

Explanation
The Information Message Processor (IMP) has detected more than 8 messages for that host. This could indicate that the host is not receiving because it is shut down or experiencing problems.

System action
TCPIP continues.

Operator response
Try pinging the host to see if it is online. If it is, then it might be that it is slow in receiving its envelopes. Call the host's system administrator for help if necessary.

System programmer response
Assist the operator as required.
**EZA8595I  Initiating restart, Series1 thinks host is down**

**Explanation**
The Series1 processor is restarting the host because it has not received acknowledgments from the host.

**System action**
TCPIP continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**EZA8596I  Series/1 application program is not available**

**Explanation**
The 1822 Series/1 application is not ready or available. A connection is not established.

**System action**
TCPIP continues.

**Operator response**
Check the connections to the Series1 channel and make sure that they are properly attached. Shut down the driver and start it again. If the system does not respond, contact the IBM Software Support Center.

**System programmer response**
Assist the operator as required.

**EZA8597I  Series1 ready to receive datagram**
**Explanation**
The 1822 Series1 processor is now up and ready to receive data. The connection is established.

**System action**
TCPIP continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
various.

**Procedure name**
various.

**EZA8598I X25 Driver in loopback mode**

**Explanation**
The X.25 interface driver is in a loopback mode. The X.25 interface cannot transmit or receive data.

**System action**
TCPIP continues.

**Operator response**
Check the X.25 driver modem hardware and reset it to DATA if it is LOOPBACK. If the hardware is OK, stop and restart the driver through TCPIP. If the problem persists, contact the IBM Software Support Center.

**System programmer response**
Assist the user as required.

**Module**
various.

**Procedure name**
various.

**EZA8599I Connection dropped by operator**

**Explanation**
The operator intentionally dropped the connection to TCPIP.

**System action**
TCPIP halts.
Operator response
Reinitiate TCPIP if necessary.

System programmer response
No action is needed.

Module
various.

Procedure name
various.

EZA8600I Error opening or reading data set

Explanation
TCPIP cannot open or read a Translate table data set. Translate tables are used to convert transmitted data from EBCDIC to ASCII or ASCII to EBCDIC.

System action
TCPIP continues. The calling program continues.

Operator response
Make sure that the translate table data set is available to TCPIP. If available, make sure that the data set does not contain corrupted information. For more information about translate tables see z/OS Communications Server: IP Configuration Reference.

System programmer response
Assist the operator as required.

Module
various.

Procedure name
various.

EZA8601I Data set format invalid

Explanation
The translate table data set has been recognized by TCPIP as a having a premature end of file (EOF). This indicates that the data set is a null file or that the data set has corrupted data. The translate table data set is not read.

System action
TCPIP continues.

Operator response
Check the translate table data set and make sure that the data is in the correct format and that the data set is not blank. For more information about translate tables see z/OS Communications Server: IP Configuration Reference.
**System programmer response**
Assist the operator as required.

**Module**
various.

**Procedure name**
various.

**EZA8602I  Offload box error**

**Explanation**
TCPIP has received an error from the Offload device that TCPIP does not recognize.

**System action**
TCPIP halts.

**Operator response**
Restart the Offload device and TCPIP. If the problem persists, contact the IBM Software Support Center.

**System programmer response**
Assist the operator as required.

**Module**
various.

**Procedure name**
various.

**EZA8603I  Offload box restart**

**Explanation**
The Offload device has been restarted.

**System action**
TCPIP halts.

**Operator response**
Wait until the Offload device has been completely initiated before using TCPIP.

**System programmer response**
No action is needed.

**Module**
various.
Procedure name
various.

EZA8604I  Offload box down

Explanation
The Offload device is not responding to TCPIP.

System action
TCPIP halts.

Operator response
Restart the Offload device and wait until it initiates TCPIP before attempting to use it. If this problem persists contact the IBM Software Support Center.

System programmer response
Assist the operator as required.

Module
various.

Procedure name
various.

EZA8624E  *** Unknown TCP return code = CallReturn ***

Explanation
TCPIP has encountered a return code that it does not recognize.

System action
TCPIP continues.

Operator response
Call the IBM software Support Center for assistance.

System programmer response
Assist the operator as required.

Module
various.

Procedure name
various.

Note: The following messages display the call type returned from the procedure SayCliCa, which is called to determine the type of call issued by a client.

EZA8625I  Abort TCP
**Explanation**
A client is using the procedure TcpAbort to close TCP service.

**System action**
TCP service to the client ends. TCPIP continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
CMERUPT

**Procedure name**
TcpAbort

---

**EZA8626I  Begin TCP/IP service**

**Explanation**
A client is using the procedure StartTcpIpService to initiate TCP/IP service.

**System action**
TCP/IP service is initiated for the client.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
CMERUPT

**Procedure name**
StartTcpIpService

---

**EZA8627I  Close TCP**

**Explanation**
A client has issued a request to close TCP service.

**System action**
TCP service to the client ends. TCPIP continues.
Operator response
No action is needed.

System programmer response
No action is needed.

Module
varies

Procedure name
varies

EZA8628I  Close UDP

Explanation
A client has issued a request to close UDP service.

System action
UDP service to the client ends. TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
varies

Procedure name
varies

EZA8629I  End TCP/IP service

Explanation
A client has issued a request to end TCP/IP service.

System action
TCP/IP service to the client ends. TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.
Module
varies

Procedure name
varies

**EZA8630I**  Handle notice

**Explanation**
The procedure ClientHandle has been called to handle an event notification. ClientHandle checks a client activity and initiates the proper procedure to handle the notification.

**System action**
TCPIP continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

Module
TCPREQU

Procedure name
TcpRequest

**EZA8631I**  Is host local?

**Explanation**
A client has requested verification of a local address by the procedure ClientIsHostLocal to determine whether a host address is local. Address verification is performed by the procedure ClientIsHostLocal.

**System action**
TCPIP continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

Module
TCPREQU

Procedure name
TcpRequest

**EZA8632I**  Monitor command
**Explanation**
A client has called the procedure MonCommand, which instructs the TCPIP address space's monitor process to open a data set and execute the commands found there. This is the principal means of updating network and address tables while the TCPIP address space is in use. MonCommand opens the data set and executes the commands found there.

**System action**
TCPIP continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
CMERUPT

**Procedure name**
MonCommand

**EZA8633I** Monitor query

**Explanation**
A client has called the procedure MonQuery, which is used to check the status of the TCPIP address space's monitor process.

**System action**
TCPIP continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
CMERUPT

**Procedure name**
MonQuery

**EZA8634I** No client call

**Explanation**
A virtual machine communication facility (VMCF) packet header did not contain a client call.
System action  
TCPIP continues.

Operator response  
No action is needed.

System programmer response  
No action is needed.

Module  
CMVERT

Procedure name  
CallToRequest

EZA8635I   Open TCP

Explanation  
A client has issued a call to the procedure ClientOpen, which establishes connections to TCP for clients, to establish TCP service. TCP service is established for the client.

System action  
TCPIP continues.

Operator response  
No action is needed.

System programmer response  
No action is needed.

Module  
TCPREQU

Procedure name  
TcpRequest

EZA8636I   Open UDP

Explanation  
A client has issued a call to the procedure UdpOpen, which establishes UDP connections, to open UDP service. UDP service to the client is opened.

System action  
TCPIP continues.

Operator response  
No action is needed.
System programmer response
No action is needed.

Module
CMERUPT

Procedure name
UdpOpen

EZA8637I    Option TCP

Explanation
A client has issued a call to the procedure ClientOption, which sets client TCP options, to specify options for a TCP connection. ClientOption completes execution and returns.

System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
TCPREQU

Procedure name
TcpRequest

EZA8638I    Receive TCP

Explanation
A client is using the procedure TcpReceive to notify the host that it is ready to receive TCP data.

System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.
Procedure name
TcpReceive

EZA8639I  Receive UDP

Explanation
A client is using the procedure UdpReceive to notify the host that it is ready to receive UDP datagrams.

System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
CMERUPT

Procedure name
UdpReceive

EZA8640I  NReceive UDP

Explanation
A client is using the procedure UdpNReceive to notify the host that it is ready to receive UDP datagrams. UdpNReceive allows the client to specify the maximum size for the datagrams it will receive. This parameter is not supported under UdpReceive.

System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
CMERUPT

Procedure name
UdpNReceive

EZA8641I  Status UDP

Explanation
A client has called the procedure UdpStatus to check the status of a UDP connection.
**System action**
TCPIP continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
CMERUPT

**Procedure name**
UdpStatus

**EZA8642I** Option UDP

**Explanation**
A client has issued a call to the procedure UdpOption, which sets client UDP options, to specify options for a UDP connection.

**System action**
UdpOption completes execution and returns. TCPIP continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
CMERUPT

**Procedure name**
UdpOption

**EZA8643I** Send TCP

**Explanation**
A client is using the procedure TcpSend to send data normally over a TCP connection.

**System action**
TCPIP continues.

**Operator response**
No action is needed.
System programmer response
No action is needed.

Module
CMERUPT

Procedure name
TcpSend

EZA8644I Send UDP

Explanation
A client is using the procedure UdpSend to send data grams normally over a UDP connection.

System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
CMERUPT

Procedure name
UdpSend

EZA8645I Status TCP

Explanation
A client is using the procedure TcpStatus to check the status of a connection to TCP.

System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
CMERUPT
**Procedure name**
TcpStatus

**EZA8646I** FReceive TCP

**Explanation**
A client is using the procedure TcpFReceive to receive data pushed over a TCP connection.

**System action**
TCPIP continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
CMERUPT

**Procedure name**
TcpFReceive

**EZA8647I** FSend TCP

**Explanation**
A client is using the procedure TcpFSend to send data over a TCP connection before the output buffer is full. This function is not supported under TcpSend, which is used to send data normally over TCP connections.

**System action**
TCPIP continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
CMERUPT

**Procedure name**
TcpFSend

**EZA8648I** Close RawIP

**Explanation**
A client is closing a raw IP connection. All data associated with the connection, including any data queued to that connection will be destroyed.
System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
CMERUPT

Procedure name
SmfSend, RawIpClose

EZA8649I  Open RawIP

Explanation
A client is using the procedure RawIpOpen to open a raw IP connection to the host.

System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
CMERUPT

Procedure name
RawIpOpen

EZA8650I  Receive RawIP

Explanation
A client is using the procedure RawIpReceive to tell the network that it is ready to receive raw IP packets.

System action
TCPIP continues.

Operator response
No action is needed.
System programmer response
No action is needed.

Module
CMERUPT

Procedure name
RawIpReceive

EZA8651I  Send RawIP

Explanation
A client is using the procedure RawIpSend to send raw IP packets over the network normally.

System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
CMERUPT

Procedure name
RawIpSend

EZA8652I  Ping request

Explanation
A client is using the procedure PingRequest to perform a PING to test continuity across the network. For more information on the PING command, see the z/OS Communications Server: IP User's Guide and Commands.

System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
CMERUPT
EZA8669E  *** Invalid call: ord = call_number ***

Explanation
A client has issued a call that TCPIP does not recognize. This indicates a programming error. The call is refused.

System action
TCPIP continues.

Operator response
Notify the system programmer of the error.

System programmer response
Check the client to determine why it is sending incorrect calls.

Module
CMPRCOM

Procedure name
SayCliCa

Note: The following messages display the connection state returned by the function SayConSt, which is called to determine the state of a connection.

EZA8670I  Connection closing

Explanation
The connection for which SayConSt was called is closing.

System action
TCPIP continues.

Operator response
Restart the connection if necessary.

System programmer response
Assist the user as necessary.

Module
varies

Procedure name
varies

EZA8671I  Listening
Explanation
The connection for which SayConSt was called is currently in a listening state.

System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
varies

Procedure name
varies

EZA8672I Nonexistent

Explanation
The connection for which SayConSt was called does not exist.

System action
TCPIP continues.

Operator response
Start the connection if necessary.

System programmer response
No action is needed.

Module
varies

Procedure name
varies

EZA8673I Open

Explanation
The connection for which SayConSt was called is in an Open state.

System action
TCPIP continues.
Operator response
No action is needed.

System programmer response
No action is needed.

Module
varies

Procedure name
varies

EZA8674I Receiving only

Explanation
The connection for which SayConSt was called is in a Receiving Only state.

System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
varies

Procedure name
varies

EZA8675I Sending only

Explanation
The connection for which SayConSt was called is in a Sending Only state.

System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.
**EZA8676I**  Trying to open

**Explanation**
TCPIP is attempting to open the connection for which SayConSt was called.

**System action**
TCPIP continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**EZA8679E**  *** Invalid state: ord = state ***

**Explanation**
SayConSt encountered a state it did not recognize. The state is displayed in the message.

**System action**
TCPIP continues.

**Operator response**
Notify the system programmer of the error.

**System programmer response**
Check the devices on each end of the connection to determine why they are sending incorrect state information. For more information about valid connection states for TCPIP, see the z/OS Communications Server: IP Sockets Application Programming Interface Guide and Reference.
Note: This message displays notifications returned by the function SayNotEn, which is used to display event notifications sent by the TCPIP address space.

**EZA8680I**  Buffer space available

**Explanation**
TCPIP has received notification that buffer space is available to send or receive data.

**Note:** This message displays notifications returned by the function SayNotEn, which is used to display event notifications sent by the TCPIP address space.

**System action**
TCPIP continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
varies

**Procedure name**
varies

---

**EZA8681I**  Connection state changed

**Explanation**
TCPIP has received notification that the state of a connection has changed.

**Note:** This message displays notifications returned by the function SayNotEn, which is used to display event notifications sent by the TCPIP address space.

**System action**
TCPIP continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
varies

**Procedure name**

**EZA8690I User wants attention**

**Explanation**

A user has requested service from TCPIP. TCPIP delivers the requested service to the user.

**Note:** This message displays notifications returned by the function SayNotEn, which is used to display event notifications sent by the TCPIP address space.

**System action**

TCPIP continues.

**Operator response**

No action is needed.
EZA8691I  Timer expired

Explanation
A timer has expired on a process or event.

Note: This message displays notifications returned by the function SayNotEn, which is used to display event notifications sent by the TCPIP address space.

System action
Processing resumes. TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

EZA8692I  FSend response

Explanation
A client has sent notification that it is using the procedure TcpFSend to push data over a TCP connection. The data is sent.

Note: This message displays notifications returned by the function SayNotEn, which is used to display event notifications sent by the TCPIP address space.

System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.
**EZA8693I  FReceive error**

**Explanation**
A client was unable to receive data because the connection to which the data was sent was not in the correct state to receive it. TCPIP will handle the resulting interrupt and retransmit the data.

*Note:* This message displays notifications returned by the function SayNotEn, which is used to display event notifications sent by the TCPIP address space.

**System action**
TCPIP continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

---

**EZA8694I  RawIP packets delivered**

**Explanation**
Raw IP packets have been delivered to a client.

*Note:* This message displays notifications returned by the function SayNotEn, which is used to display event notifications sent by the TCPIP address space.

**System action**
TCPIP continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.
EZA8695I RawIp packet space available

Explanation
TCPIP has received notification that buffer space is available to receive raw IP packets.

Note: This message displays notifications returned by the function SayNotEn, which is used to display event notifications sent by the TCPIP address space.

System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
varies

EZA87111   Flash override

Explanation
TCPIP has received a packet with a precedence value of flash override.

Note: This message displays the precedence values returned by the function SayPreTy, which is used to display the precedence value of an incoming packet. For more information about precedence values, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.
**EZA8712I**  Critic/ECP

**Explanation**
TCPIP has received a packet with a precedence value of Critic/ECP.

**Note:** This message displays the precedence values returned by the function SayPreTy, which is used to display the precedence value of an incoming packet. For more information about precedence values, see the z/OS Communications Server: IP Programmer's Guide and Reference.

**System action**
TCPIP continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**EZA8713I**  Internetwork control

**Explanation**
TCPIP has received an internetwork control packet.

**Note:** This message displays the precedence values returned by the function SayPreTy, which is used to display the precedence value of an incoming packet. For more information about precedence values, see the z/OS Communications Server: IP Programmer's Guide and Reference.

**System action**
TCPIP continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.
**EZA8714I**  Network control

**Explanation**
TCPIP has received a network control packet.

*Note:* This message displays the precedence values returned by the function SayPreTy, which is used to display the precedence value of an incoming packet. For more information about precedence values, see the z/OS Communications Server: IP Programmer's Guide and Reference.

**System action**
TCPIP continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**

EZA8917I  Type of Service: Precedence = precedence, performance_emphasis, *** garbage in reserved bits = incorrect_data
**Explanation**

These messages indicate the type of service being delivered by an IP datagram, the precedence value, and the performance emphasis. The performance emphasis can be either low delay, high throughput, or high reliability. The message “garbage in reserved bits” is displayed only if incorrect data is encountered in a reserved field of the IP header. The data will be ignored.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

EZA8981I V1: VCMPFLG1
Explanation

This message displays the VCMPFLG1, which is used to specify options associated with a particular function. The flag byte can be set to the following values:

Flag Value Indicates

VMCPAUTS (X'80')
An AUTHORIZE SPECIFIC request.

VMCPPRTY (X'40')
For SEND, SEND/RECV, SENDX, and IDENTIFY requests, a PRIORITY message request. For an AUTHORIZE request, it indicates an AUTHORIZE PRIORITY request. PRIORITY messages cannot be sent to another machine unless it has been authorized to receive them.

VMCPSMSG (X'20')
The virtual machine accepts messages sent via the SMSG command.

Note: This message displays the virtual machine communication facility (VMCF) function request taken from the VMCF packet header. The flag is reserved, and therefore should be X'00' initially.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcfu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

EZA8986I  Vaddress A: address

Explanation
This message displays the VMCPVADA register taken from the virtual machine communication facility (VMCF) packet header. This register contains one of four addresses, depending on which VMCF function is requested. For SEND, SEND/RECV, and SENDX requests, VMCPVADA contains the address of the source address space data. For RECEIVE requests, VMCPVADA contains the address of a sink address space RECEIVE buffer. For REPLY requests, VMCPVADA contains the address in sink address space where REPLY data is located. For an AUTHORIZE request, VMCPVADA contains the address of an external interrupt buffer.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

EZA9080I SayVmcFu(function)->directory_name V1=VMCPFLG1 ID=message_id VadA=VMCPVADA LenA=length_of_VMCPVADA VadB=VMCPVADB LenB=length_of_VMCPVADB Conn=connection Call=call_code Return=SayCalRe(return_code)
Explanation

This message displays the contents of a virtual machine communication facility (VMCF) packet. V1 is a flag byte used to specify options associated with a particular function. The flag byte can be set to the following values:

**VMCPAUTS(X'80')**

An AUTHORIZE SPECIFIC request.

**VMCPPRTY(X'40')**

For SEND, SEND⁄RECV, SENDX, and IDENTIFY requests, a PRIORITY message request. For an AUTHORIZE request, it indicates an AUTHORIZE PRIORITY request. PRIORITY messages cannot be sent to another address space unless that address space has been authorized for PRIORITY messages. The SEND and RESPONSE external interrupts for a PRIORITY message are queued ahead of pending nonpriority external interrupts.

**VMCPSMSG(X'20')**

The virtual machine accepts messages sent via the SMSG command.

The ID value is the message identifier.

VAdA contains one of four addresses, depending upon which VMCF function is requested.

For SEND, SEND⁄RECV, and SENDX requests, VMCPVADA contains the address of the source address space data. For RECEIVE requests, VMCPVADA contains the address of a sink address space RECEIVE buffer. For REPLY requests, VMCPVADA contains the address in sink address space where REPLY data is located. For an AUTHORIZE request, VMCPVADA specifies the address of the interrupt buffer.

LenA contains the length of data sent by a user, the length of a RECEIVE buffer, or the length of an external interrupt buffer, whichever is specified in the field VMCPVADA.

VMCPVADB contains the address of a source address space's REPLY buffer for a SEND⁄RECV request. When the sink address space issues a REPLY in response to a SEND⁄RECV from the source address space, the REPLY data is moved in this buffer.

LenB specifies the length of the buffer being used to move the data indicated in the field VMCPVADB.

Conn specifies the connection being used to send and receive VMCF packets.

Call displays the call code associated with the packet.

Return indicates whether the packet was sent and received successfully.

**Note:** For more information about this message, see the message **EZA nnnn**, where **nnnn** is the 4-digit number in parentheses at the end of this message.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

System action

TCP/IP continues.

Operator response

No action is needed.

System programmer response

Respond as indicated by the message **EZA nnnn** where **nnnn** is the 4-digit number in parentheses at the end of this message.

Module

*varies*
Procedure name
varies

EZA9200I     Implied Argument lengths: lengths

Explanation
These trace messages display the size in characters of the arguments submitted.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
FAL@PRTC

Procedure name
DISPLAY_ARGUMENT_SIZES

EZA9202I     filename data set name

Explanation
This is the data set name of the message file being used by Falprint to hold text for messages that Falprint generates as write to operator (WTO) messages, which are written to the operator's console. This allows messages from TCPIP or MVS to be displayed even if an overlying application is being used. This message is displayed with message EZA9228I.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
FAL@PRTC
**Procedure name**
prtmsgw

**EZA9203E**  MSG message number not defined

**Explanation**
The specified message number is not defined in the message data set.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

**System action**
TCPIP continues.

**Operator response**
Insert the message ID and message text in the message data set.

**System programmer response**
No action is needed.

**Module**
FAL@PRTC

**Procedure name**
prtmsgw

---

**EZA9204I**  findmsg:colon try again

**Explanation**
The message specified was not properly linked to the Falprint message repository. Falprint creates a repository of TCPIP messages that are not displayed while an application is being run on TCPIP and converts them to write to operator (WTO) messages, allowing them to be displayed without interference from an overlying application.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

**System action**
The program tries again and continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
FAL@PRTC
**Procedure name**
findmsg

**EZA9205I** searching for weak link: `data_set_name msg_file`

**Explanation**
Falprint is searching for a weak link between the data set from which message text is being taken and the message file, which is used by Falprint to generate write to operator (WTO) messages, which are written to the operator's console if necessary. A weak link indicates that a message needed by Falprint from the current data set is not duplicated in the message file.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

**System action**
The program continues.

No action is needed.

**System programmer response**
No action is needed.

**Module**
FAL@PRTC

**Procedure name**
varies

**EZA9206I** Found weak link for message file `name`

**Explanation**
A message in the indicated data set did not correspond to a message in the message file being constructed by Falprint, creating a weak link between the message files. Falprint builds a message file containing message text from TCPIP and MVS messages that will not be displayed if an application is being run over TCPIP and converts them to write to operator (WTO) messages, allowing them to be displayed.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

**System action**
The program continues.

**Operator response**
Notify the system programmer of this message.

**System programmer response**
Check the message file and the source data set to determine where the weak link occurred and add the necessary message to the message file.
**Module**  
FAL@PRTC  

**Procedure name**  
isweakmsg  

**EZA9207I** findmsg: looking for message number *message number*

**Explanation**  
The findmsg function, which finds a specific message in a message file, is searching the file for the specified message.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

**System action**  
The program continues.

No action is needed.

**Module**
CMERUPT

**Procedure name**
PrintTimers

**EZA9286I**  
**Timer: delta = timer_change Datum = timer_associated_notification**

**Explanation**
This message displays the elapsed time from an internal timer set by TCPIP. The Datum in this message is the notification associated with the timer.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

**System action**
TCPIP continues.

**Operator response**
No action is needed.
System programmer response
No action is needed.

Module
CMERUPT

Procedure name
PrintTimers

EZA9288I RemoveTimer: Elapsed time is time

Explanation
The procedure RemoveTimer has been called to remove a timer that has been running for the indicated length of time.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
CMERUPT

Procedure name
RemoveTimer

EZA9290I Inserting timer: Time = seconds Data = timer associated notification

Explanation
The procedure InsertTimeout is inserting a new timer to replace one that has expired or has been removed. The length of time the timer will run is displayed in the message. The Data displayed in this message is the timer associated notification from the timer that has been removed or has expired.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

System action
TCPIP continues.

Operator response
No action is needed.
System programmer response
No action is needed.

Module
CMERUPT

Procedure name
InsertTimeout

EZA9292I SetTimer: Elapsed time is time

Explanation
This message is sent to the trace file if the TIMERdebug option was specified. The timer queue is periodically adjusted to reflect the time that has elapsed since the clock comparator was last set. The elapsed time displayed in this message is the time since the clock comparator was last set.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
CMERUPT

Procedure name
SetTimer

EZA9293I Setting timeout for number Seconds

Explanation
This message is sent to the trace file if the TIMERdebug option was specified. It indicates that a new timer is being created and set to run for the indicated length of time.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

System action
TCPIP continues.

Operator response
No action is needed.
System programmer response
No action is needed.

Module
CMERUPT

Procedure name
SetTimer

EZA9294I InHeader.V2 is header

Explanation
This message indicates that the procedure MonQuery, which queries the system monitor, has received an error from the virtual machine communication facility (VMCF) indicating that no buffer space is available to receive the query. The query will be resent when buffer space is available to receive it.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action
MonQuery halts. TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
CMERUPT

Procedure name
MonQuery

EZA9295I Severe error: Insufficient virtual memory available for TCP-IP client

Explanation
No virtual storage was available to open a connection to a TCPIP client. The connection is refused and the client will not receive TCPIP service.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action
The TCPIP address space continues.

Operator response
Notify the system programmer of the error.
System programmer response
Increase the amount of virtual storage available to the host TCPIP address space and restart the connection.

Module
CMERUPT

Procedure name
NoRoom

EZA9340I  control key

Explanation
The PA2 or CLEAR key has been pressed. The Full-Screen Package (FSP) returns to CP READ and clears the screen when one of these keys is pressed.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
CMFSCRN

Procedure name
ReadEnded

EZA9353I  CLIENTconsistency is set for full screen mode.

Explanation
The CLIENTconsistency has been set for full-screen tracing mode.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

System action
TCPIP continues.

Operator response
No action is needed.
**System programmer response**
No action is needed.

**EZA9354I**  
*bit number is incorrect in HighTwoBits.*

**Explanation**
Indicates the bit number in HighTwoBits. This number can be a number in the range 0 - 64.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcfu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

**System action**
TCPIP continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
CMFSCRN

**Procedure name**
FsIoBegRupt

**EZA9355I**  
*Terminal Model model number is not supported.*

**Explanation**
The indicated terminal model number is not supported on this system.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcfu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

**System action**
TCPIP ends.

**Operator response**
See the z/OS Communications Server: IP Configuration Reference for more information about technical requirements for TCP/IP for MVS and restart TCPIP.
EZA9356I  About to begin

Explanation
This message displays when the debug option is used. The full screen mode has been requested and is about to begin its display.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

EZA9403I  data set name not found.

Explanation
The displayed data set name could not be found. When you make changes to your HOSTS.LOCAL data set, you must generate and install new HOSTS.SITEINFO and HOSTS.ADDRINFO data sets.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

System action
TCPIP continues.

Operator response
No action is needed.
System programmer response
Use the MAKESITE statement as either a TSO command or a batch job to generate the new data sets. See the z/OS Communications Server: IP Configuration Reference for more information.

Module
CMHOSTN

Procedure name
GetSiteEntry

EZA9404I value.value.value.value

Explanation
Indicates the host's IP address as specified in the NSINTERADDR statement of the TCPIP.DATA data set. This message is displayed with other messages indicating the port number for this IP address. See the z/OS Communications Server: IP Configuration Reference for more information.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
CMHOSTN

Procedure name
PrintHost

EZA9409E Syntax or other errors found in file file, continuing.

Explanation
This message is issued when the parser did not find a valid keyword. Syntax or other specification errors were found in the indicated file. The parser state is set to IgnoreState.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

System action
Processing continues.
**Operator response**
The operator should check that the TCPIP.DATA configuration data set contains the correct syntax and valid information. Correct the input file for correct program operation. See the z/OS Communications Server: IP Configuration Reference for a complete list of the valid keywords.

**System programmer response**
Assist the user with problem resolution, as required.

**Module**
CMHOSTN

**Procedure name**
ReadTCPIPdataFILE

**EZA9410E**  See string line line number on or before column column number

**Explanation**
An error has occurred in the indicated line number of the TCPIP.DATA data set.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

**System action**
TCPIP continues.

**Operator response**
Correct the error in the indicated line number and reinitialize TCPIP. See the z/OS Communications Server: IP Configuration Reference for more information.

**System programmer response**
No action is needed.

**Module**
CMHOSTN

**Procedure name**
ReadTCPIPdataFILE

**EZA9411E**  Unable to allocate⁄open dataset file, continuing.

**Explanation**
The application was unable to allocate or unable to open the indicated data set. The reason is indicated by additional messages.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

**System action**
TCPIP continues.

1200  z/OS Communications Server: IP Messages: Volume 1 (EZA)
**Operator response**

Check the indicated data set to make sure that it is properly formatted and in storage accessible to the host.

**System programmer response**

No action is needed.

**Module**

FTBMVSUB, CMHOSTN

**Procedure name**

varies

**EZA9412I**  Unable to allocate/open data set name file, continuing.

**Explanation**

The attempt to open the HOSTS.SITEINFO data set was unsuccessful. This data set must be generated and installed when changes are made to the HOSTS.LOCAL data set.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

**System action**

TCPIP continues.

**Operator response**

No action is needed.

**System programmer response**

Use the MAKESITE statement as either a TSO command or a batch job to generate the new data set. See the z/OS Communications Server: IP Configuration Reference for more information.

**Module**

CMHOSTN

**Procedure name**

GetSiteEntry

**EZA9416E**  Failure in procedure getstate for data_set

**Explanation**

The procedure getstate, which is called to determine the status of a connection, was unsuccessful for the indicated data set. This indicates that the data set might not have a connection. The parameter list contained in the indicated data set is not passed to MAKESITE.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

**System action**

TCPIP continues.
Operator response
Notify the system programmer of the error.

System programmer response
Check the indicated data set to make sure that it is in storage accessible to the host.

Module
CMMAKSI

Procedure name
StartUp

EZA9417E System error trying to obtain format 1 DSCB for data_set

Explanation
The host was unable to determine the format for the data set control block (DSCB) for the indicated data set. CMMAKSI received a return code of 8 from the procedure getstate, which is called to determine the status of a connection. The data set is not read.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

System action
TCPIP continues.

Operator response
Notify the system programmer of the error.

System programmer response
Make sure the DSCB is correctly formatted and resubmit the command.

Module
CMMAKSI

Procedure name
StartUp

EZA9418E Failure using dataset, data set is migrated.

Explanation
The application was unable to use the indicated data set because the data set has been migrated and is inaccessible to the host.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

System action
The indicated data set is not accessed. TCPIP continues.
Operator response
Recall the indicated data set. Make sure that it is properly formatted and in storage accessible to the host.

System programmer response
No action is needed.

Module
FTSMVSB, CMMAKSI, CMHOSTN

Procedure name
varies

EZA9419E Failure using data_set, volume is not mounted.

Explanation
The MAKESITE command was unable to extract a parameter list from the indicated data set because the volume containing the data set is not mounted.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

System action
TCPIP continues.

Operator response
Mount the correct volume and resubmit the command.

System programmer response
Assist the user as necessary.

Module
CMMAKSI

Procedure name
StartUp.

EZA9420E Failure using data_set, data set is not direct access.

Explanation
The MAKESITE command was unable to extract a parameter list from the indicated data set because the data set is not a direct access data set. The parameter list is not transferred.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

System action
TCPIP continues.
**Operator response**
Convert the data set to a direct access data set and resubmit the command.

**System programmer response**
Assist the user as necessary.

**Module**
CMMAKSI

**Procedure name**
StartUp

**EZA9421E**  Failure using *data_set*, data set is VSAM.

**Explanation**
The MAKESITE command was unable to extract a parameter list from the indicated data set because it is a Virtual Storage Access Method (VSAM) data set.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

**System action**
The parameter list is not transferred. TCPIP continues.

**Operator response**
Make sure that the data set was specified correctly and resubmit the command.

**System programmer response**
Assist the user as necessary.

**Module**
CMMAKSI

**Procedure name**
StartUp

**EZA9422E**  Failure obtaining *data_set* or invalid data set organization (DSORG)

**Explanation**
The MAKESITE command was unable to extract a parameter list from the indicated data set because the data set was specified incorrectly or had an incorrect data set organization. The parameter list is not transferred.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

**System action**
TCPIP continues.
Operator response
Make sure that the data set was specified correctly and that it is a sequential data set.

System programmer response
Assist the user as necessary.

Module
CMMAKSI

Procedure name
StartUp

EZA9423E Failure locating data_set or invalid record format (RECFM).

Explanation
The MAKESITE command was unable to extract a parameter list from the indicated data set because the data set was specified incorrectly or had the wrong record format. The MAKESITE command requires a fixed record length. The parameter list is not transferred.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

System action
TCPIP continues.

Operator response
Make sure that the date set was specified correctly and has the proper record format. Correct the record format if necessary.

System programmer response
Assist the user as necessary.

Module
CMMAKSI

Procedure name
StartUp

EZA9424E Error on open of data_set, sense code = sense_code.

Explanation
CMMAKSI encountered an error in opening the indicated data set. The reason for this error is indicated by the sense code displayed in this message. The data set is not opened.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

System action
TCPIP continues.
Operator response
Notify the system programmer of the error.

System programmer response
Use the sense code displayed in this message and the z/OS Communications Server: IP Sockets Application Programming Interface Guide and Reference to determine the cause of the error.

Module
CMMAKSI

Procedure name
StartUp

EZA9431I FTP.DATA file not found. Using hardcoded default values.

Explanation
When the FTP.DATA file is not being used, this message indicates that hardcoded defaults are in effect.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

No action is needed.

**System programmer response**
No action is needed.

**Module**
CMRESOL

**Procedure name**
SayRRType

---

**EZA9490I CNAME**

**Explanation**
The resource record for which SayRRType was called is a canonical name record. The canonical name record is used to provide alias or alternative name information for a domain name. The domain name specified in the first field of the record is an alternative to the canonical or real name specified in the data field.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

---

**System action**
TCPIP continues.

**Operator response**
No action is needed.

**System programmer response**
No action is needed.

**Module**
CMRESOL

**Procedure name**
SayRRType

---

**EZA9491I SOA**

**Explanation**
The resource record for which SayRRType was called is a start of authority record. The SOA record is unique to a zone and contains administrative details of the zone, including:

- The domain name of the name server responsible for the zone.
- The mail address of the user responsible for the zone.
- The serial number of the zone database, which identifies the current revision of the data.
• The refresh interval, which indicates the length of time, in seconds, you must allow between the refreshing of a database from a remote name server.

• The retry interval, which indicates the length of time, in seconds, you must allow before trying a failed attempt again.

• The expiration time-to-live (TTL), which indicates the maximum time, in seconds, for records to be valid in the zone database.

• The minimum TTL, which indicates the minimum time, in seconds, for records to be valid in the zone database.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
CMRESOL

Procedure name
SayRRType

EZA9492I  MB

Explanation
The resource record for which SayRRType was called is a mailbox record. The mailbox record is an experimental record with no RFCs that define specific rules for this data type.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
CMRESOL
EZA9493I MG

Explanation
The resource record for which SayRRType was called is a mail group member record. The mail group member record specifies the mail address of a person belonging to the mail group specified in the domain name field. Mail group records are experimental and have no RFCs that define specific rules for this data type.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
CMRESOL

Procedure name
SayRRType

EZA9494I MR

Explanation
The resource record for which SayRRType was called is a mail rename name record. The mail rename name record specifies a mailbox that is a rename of the mailbox specified in the domain name field. The mail rename name record is an experimental record. There are no RFCs that define specific rules for this data type.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
CMRESOL
Procedure name
SayRRType

EZA9495I    NULL

Explanation
The resource record for which SayRRType was called is a null resource record. The null resource record contains any information, providing it is less than 65 535 octets in length. The null resource record is an experimental record type. There are no RFCs that define specific rules for this data type.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
CMRESOL

Procedure name
SayRRType

EZA9496I    WKS

Explanation
The resource record for which SayRRType was called is a well-known services record. The well-known services record stores the protocol numbers of multiple services in a single record. See RFC 1060 for more detailed information. See Appendix B, “Related protocol specifications,” on page 1247 for information about accessing RFCs.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.
Module
CMRESOL

Procedure name
SayRRType

EZA9497I  PTR

Explanation
The resource record for which SayRRType was called is a domain name pointer record. The domain name pointer record is mainly used to store data for the in-addr.arpa domain, and contains the domain name referenced by an internet address.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

EZA9498I  HINFO

Explanation
The resource record for which SayRRType was called is a host information record. This record type contains a text string specifying the central processing unit (CPU) type and operating system of a node.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

System action
TCPIP continues.

Module
CMRESOL

Procedure name
SayRRType

**EZA9499I**  INFO

**Explanation**
The resource record for which SayRRType was called is a mailbox information record. The mailbox information record specifies the mail addresses of the persons responsible for the mail group specified in the domain name field. The mailbox information record is an experimental record type. There are no RFCs that define specific rules for this data type.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

No action is needed.

Module
CMRESOL

Procedure name
SayRRType

**EZA9500I**  MX

**Explanation**
The resource record for which SayRRType was called is a mail exchanger record. The mail exchanger record defines a host that can act as a mail exchange for the domain specified in the domain name field. A mail exchange runs a mail agent that delivers or forwards mail for the domain name specified in the first field.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

**EZA9517I**  *address_class number name*

**Explanation**
This message displays the address class of a query. You will also receive one or more of the following values, depending on the resource record type:

**Value**
**Indicates**

- **query_type query_class**
  No responses have been received for this query.

- **time_to_live**
  Responses have been received for the query; they will be cached by the name server for the indicated length of time.

- **host_number**
  A response has been received for an A type query, the response contains a host address.

- **cname**
  A response has been received for a CNAME query. The response contains the canonical name of a host.

- **mailbox**
  A response has been received for an MX query. The response contains the address of a mailbox.

- **name_server**
  A response has been received for a name server query. The response contains the address of the local name server.

- **SOA_address**
  A response has been received for a start of address query. The response contains the address of the start of the table of authority for this zone, and displays the contents of the SOA record.

For more information about these fields, see the *z/OS Communications Server: IP User's Guide and Commands*.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcfFu, which is called to determine the type of a VMCF function call. **Module**
CMSCRNS

**Procedure name**
Move

**EZA9689I**  DbcsEtoA : First Double Byte Character Invalid ord(firstchar)

**Explanation**
EBCDIC double-byte characters are being converted to ASCII. The first character of a double-byte character, with the specified ordinal value, is not in the valid range for EBCDIC double-byte characters. For translation modes containing both single-byte and double-byte data, the erroneous character will be converted using single-byte EBCDIC to ASCII conversion tables. Data will continue to be converted in this manner until an EBCDIC shift-out character is encountered. If the translation mode uses shift-out and shift-in characters or escape sequences to delimit single-byte and double-byte ASCII data, a shift-in character or escape sequence will be added before the converted erroneous character.

For translation modes that convert pure double-byte data only, the erroneous character will be inserted without conversion and the conversion routine will move to the next character assuming it to be a valid first double-byte character. A shift-in character or escape sequence will not be inserted for these modes.
**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

**System action**
TCPIP continues.

**Operator response**
Check the contents of the data being transmitted, to see if it contains valid double-byte characters. EBCDIC double-byte characters are enclosed within shift-out '0E' X and shift-in '0F' X characters.

**System programmer response**
Assist the user as necessary.

**Module**
CMDBCSCV PASCAL

**Procedure name**
DbcsEtoA

**EZA9690I  DbcsEtoA : Second Double Byte Character Invalid ord(firstchar) ord(secondchar)**

**Explanation**
EBCDIC double-byte characters are being converted to ASCII. The second character of a double-byte character, with the specified ordinal value, is not in the valid range for EBCDIC double-byte characters. For translation modes containing both single-byte and double-byte data, the erroneous character and the corresponding first double-byte character will be converted using single byte EBCDIC to ASCII conversion tables. Data will continue to be converted in this manner until an EBDCIC shift-out character is encountered. If the translation mode uses shift-out and shift-in characters or escape sequences to delimit single-byte and double-byte ASCII data, a shift-in character or escape sequence will be added before the converted erroneous characters.

For translation modes that convert pure double-byte data only, the erroneous character and the first double-byte character will be inserted without conversion and the conversion routine will move to the next character assuming it to be a valid first double byte character. A shift-in character or escape sequence will not be inserted for these modes.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

**System action**
TCPIP continues.

**Operator response**
Check the contents of the data being transmitted, to see if it contains valid double-byte characters. EBCDIC double-byte characters are enclosed within shift-out '0E' X and shift-in '0F' X characters.

**System programmer response**
Assist the user as necessary.
EZA9691I  DbcsAtoE: Character after ESCAPE Invalid ord(ASCIIEscape) ord(nextchar)

Explanation
ASCII JIS Kanji double-byte characters are being converted to EBCDIC. ASCII JIS Kanji double-byte characters are enclosed within the shift-out escape sequence ESC $ @ or ESC $ B, and the shift-in escape sequence ESC ( B or ESC ( J. The character after the ESCAPE, with the specified ordinal value, is not valid for a JIS Kanji shift-out or shift-in sequence. For translation modes containing both single-byte and double-byte data, the erroneous character and the escape character will be converted using single-byte ASCII to EBCDIC conversion tables. Data will continue to be converted in this manner until a valid shift-out escape sequence is encountered. An EBCDIC shift-in character will be inserted before the converted erroneous characters if the error is encountered after a valid double-byte character.

For translation modes that convert pure double-byte data only, the erroneous character and the escape character will be inserted without conversion and the conversion routine will move to the next character assuming it to be a valid first double byte character. An EBCDIC shift-in character will not be inserted for these modes.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

System action
TCPIP continues.

Operator response
Check the contents of the data being transmitted, to see if it contains valid JIS Kanji double-byte characters and escape sequences for the selected conversion type.

System programmer response
Assist the user as necessary.

CMDBCSCV PASCAL

Procedure name
DbcsAtoE

EZA9694I DbcsAtoE : Second Double Byte Character Invalid ord(firstchar) ord(secondchar)

Explanation
ASCII double-byte characters are being converted to EBCDIC. ASCII double-byte characters are indicated when
the first character is in the range for ASCII double-byte characters. The second character of a double-byte
character, with the specified ordinal value, is not in the valid range for the second byte of double-byte
characters. For translation modes containing both single-byte and double-byte data, the erroneous character
and the corresponding first double-byte character will be converted using single byte ASCII to EBCDIC
conversion tables. Data will continue to be converted in this manner until a valid shift-out character or valid shift-
out escape sequence is encountered. An EBCDIC Shift-in character will be inserted before the converted
erroneous characters.

For translation modes that convert pure double-byte data only, the erroneous character and the first double-
byte character will be inserted without conversion and the conversion routine will move to the next character
assuming it to be a valid first double-byte character. An EBCDIC shift-in character will not be inserted for these
modes.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the
function SayVmcfFu, which is called to determine the type of a VMCF function call. For more information about
VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

System action
TCPIP continues.

Operator response
Check the contents of the data being transmitted, to see if it contains valid ASCII double-byte characters for the
selected conversion type.

This message is displayed upon invocation of the IssueCP procedure. This function asks CP to invoke the given command and returns the return code and response string that CP provides.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

EZA9736I Call to Tsch

Explanation
This message is displayed upon the invocation of the Tsch procedure. This function returns a condition code of 3, indicating that this function is not operational.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcfFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

System action
TCPIP continues.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
TCMVMISS
**EZA9737I  Call to GetSid**

**Explanation**
This message is displayed upon the invocation of the GetSid function. This function gets the subsystem-identification word corresponding the device address.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcfu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

**System action**
TCPIP continues.

Chapter 11. EZAINxx messages

EZAIN11I ALL TCPIP SERVICES FOR PROC procedure name ARE AVAILABLE.

Explanation
TCP/IP has successfully initialized and is ready to process requests.
procedure name is the name of the procedure used to start TCP/IP.

System action
The TCP/IP procedure begins to process user requests.

Operator response
No action is needed.

System programmer response
No action is needed.

Module
EZBTIINI

EZAIN23I CTRACE IS ACTIVE FOR jobname WITH OPTIONS OTHER THAN THE DEFAULT OPTIONS

Explanation
CTRACE is active with options other than the default options (MINIMUM, INIT, OPCMDS, or OPMSGS). See the information about specifying trace options in the z/OS Communications Server: IP Diagnosis Guide.

jobname is the name of the procedure used to start TCP/IP.

System action
TCP/IP is initialized with CTRACE active.

Operator response
No action is needed.

System programmer response
Running TCP/IP with other than the default CTRACE options can cause a performance degradation. Issue the DISPLAY TRACE,COMP=SYSTCPIP,SUB=(jobname) command to display which other CTRACE options are active, and to determine if they need to be set.

Module
EZBTIINI

Procedure name
MAIN
Chapter 12. EZAOPxx messages

EZAOP41I  'mvscommand TCPIP' COMMAND COMPLETED SUCCESSFULLY

Explanation
The system successfully processed the DISPLAY or VARY command.
In the message text:
mvscommand
   The MVS command verb specified for TCPIP.

System action
Processing continues

System programmer response
No action is needed.

User response
No action is needed.

Module
EZAO2CMD

EZAOP42I  'mvscommand TCPIP' SYNTAX ERROR, description token

Explanation
A syntax error occurred during the command processing of the specified mvscommand. The description and

description
   A description of the error. The description can be one of the following:
   
   COMMA (',') EXPECTED
      A comma (',') was expected but was not specified.
   
   INVALID PROCNAME
      An invalid TCPIP procedure name was specified.

   The token from the command where the error occurred.

System action
The command request was not completed.

Operator response
Correct the syntax and re-issue the command.
System programmer response
No action is needed.

User response
Correct the syntax and re-issue the command.

Module
EZA02CMD

EZAOP45I  SPECIFIED TCPIP PROCNAME IS NOT RUNNING: procname

Explanation
The TCPIP procedure name in the command was not active.
In the message text:
procname
  The TCPIP procedure name for the DISPLAY or VARY command.

System action
The command request is not completed.

System programmer response
No action is needed.

User response
Use the DISPLAY TCPIP command to determine the active TCPIP procedures. Try the command again.

Module
EZA02CMD

Procedure name
Do_V3R3

EZAOP46I  TCPIP PROCNAME MUST BE SPECIFIED.

Explanation
More than one TCPIP is currently active and a TCPIP procedure name must be specified in the DISPLAY or VARY command.

System action
The command request is not completed.

System programmer response
No action is needed.

User response
Use the DISPLAY TCPIP command to determine the active TCPIP procedures. Try the command again.
**Module**
EZAO2CMD

**Example**

```
d tcpip,,n,dev
EZAOP46I TCPIP PROCNAME MUST BE SPECIFIED.
```

**Procedure name**
ParseProcName

**EZAOP47I**  
*server* HAS NEVER BEEN STARTED

**Explanation**
This message is issued in response to the D TCPIP or D TCPIP,TELNET display command if the server type has never been started.

In the message text:

*server*  
The type of server that has never been started. The value is either TCPIP or TELNET.

**System action**
The command request cannot be completed.

**Operator response**
Try this command again after one or more servers of the type indicated in the message have been started.

**System programmer response**
No action is needed.

**User response**
Not applicable.

**Problem determination**
None.

**Source**
z/OS Communications Server TCP/IP

**Module**

**Routing code**
Not applicable.

**Descriptor code**
5
Automation
Not applicable.

Example

```
display tcpip
EZAOP47I TCPIP HAS NEVER BEEN STARTED

EZAOP49I THERE ARE NO ACTIVE TCPIPS
```

Explanation
There are no active TCPIP procedures currently running.

System action
The command request cannot be completed.

System programmer response
No action is needed.

User response
Try this command again after one or more TCPIP procedures have been started.

Module
EZAO2CMD

Procedure name
ParseProcName

```
EZAOP50I TCPIP STATUS REPORT
```

Explanation
This is a heading for the TCPIP status report in response to the DISPLAY TCPIP command.

System action
The command is accepted.

System programmer response
No action is needed.

User response
No action is needed.

Module
EZAO2DSP

```
d tcpip
EZAOP50I TCPIP STATUS REPORT
COUNT TCP/IP NAME VERSION STATUS
```

1242 z/OS Communications Server: IP Messages: Volume 1 (EZA)
Procedure name
OutputTcpStatus

**EZAOP60I**  TELNET STATUS REPORT
TELNET NAME   VERSION   STATUS
----------------------   --------------     ------------
server_name   version   status

*** END TELNET STATUS REPORT ***

Explanation
This message is displayed in response to the D TCPIP,TELNET command. The message displays the name, version, and status of each Telnet server that is active now or was previously active.

In the message text:

**server_name**
The name of the Telnet server.

**version**
The version and release of Communications Server that was used when the specified server was started.

**status**
The current state of the Telnet server. Valid states are:

**STARTING**
The Telnet server is initializing.

**ACTIVE**
The Telnet server is initialized and ready to support client connections.

**TERMINATING**
The Telnet server is shutting down and is not supporting connections.

**INACTIVE**
The Telnet server has shut down, and the procedure has ended.

If the Telnet server has been stopped with the STOP console command, (STOP CMD) is appended to the status.

System action
None.

Operator response
None.

System programmer response
None.

User response
Not applicable.

Problem determination
None.

Automation
Not applicable.

Example
```
D TCPIP.TELNET
EZAO60I TELNET STATUS REPORT
TELNET NAME  VERSION    STATUS
-----------  --------   --------------------------------
TELNET       CS V1R13   ACTIVE
TELNET5      CS V1R13   INACTIVE (STOP CMD)
TELNET4      CS V1R13   INACTIVE (STOP CMD)
*** END TELNET STATUS REPORT ***
```
Appendix A. Additional information about remote procedure call (RPC) messages

This appendix contains information about RPCLIB and RPCINFO messages.

RPCLIB messages

To solve remote procedure call (RPC) errors, begin by doing the following actions:

- Check the system console to make sure that PORTMAP and TCPIP are running.
- Check that sufficient storage is available for tasks. The required heap size varies, but could also be the cause of the problem.
- Compress data sets periodically.

See the z/OS Communications Server: IP Programmer’s Guide and Reference for information about basic RPC procedures and the requirements for RPC parameters. From this reference, you can determine the missing or incorrect information that caused the error. This reference also lists the tcperror and perror codes, and many of the procedures described in this chapter. Other procedures are contained in the source code and are made up of the basic procedures.

Some RPC errors are caused by C language coding problems. See the following common C language coding errors:

- Array subscripts out of bounds.
- Bad pointers in the user source code. Pointers to incorrect addresses can cause a number of different errors, such as protection violations and overwritten storage.
- Not freeing storage at the end of the job.
- Overwriting data or program areas, (can be an unterminated string). Strings require a null (X’00’ or \0) in the last position.
- Pointer misspecification, such as *p, p, &p, in the user source code.
- Unending loops that generate storage usage.

RPCINFO messages

For RPCINFO errors, PING and NETSTAT are important tools. You can use RPCINFO to check procedures registered on local and remote PORTMAPs. PING verifies that local and remote hosts are running with TCPIP. NETSTAT provides the status of socket connections and many other conditions.
Appendix B. Related protocol specifications

This appendix lists the related protocol specifications (RFCs) for TCP/IP. The Internet Protocol suite is still evolving through requests for comments (RFC). New protocols are being designed and implemented by researchers and are brought to the attention of the Internet community in the form of RFCs. Some of these protocols are so useful that they become recommended protocols. That is, all future implementations for TCP/IP are recommended to implement these particular functions or protocols. These become the de facto standards, on which the TCP/IP protocol suite is built.

Draft RFCs that have been implemented in this and previous Communications Server releases are listed at the end of this topic.

Many features of TCP/IP Services are based on the following RFCs:

Internet drafts

Internet drafts are working documents of the Internet Engineering Task Force (IETF), its areas, and its working groups. Other groups can also distribute working documents as Internet drafts. You can see Internet drafts at http://www.ietf.org/ID.html.
Appendix C. Accessibility

Publications for this product are offered in Adobe Portable Document Format (PDF) and should be compliant with accessibility standards. If you experience difficulties when using PDF files, you can view the information through the z/OS Internet Library website http://www.ibm.com/systems/z/os/zos/library/bkserv/ or IBM Knowledge Center http://www.ibm.com/support/knowledgecenter. If you continue to experience problems, send a message to Contact z/OS web page (www.ibm.com/systems/z/os/zos/webqs.html) or write to:

IBM Corporation
Attention: MHVRCFS Reader Comments
Department H6MA, Building 707
2455 South Road
Poughkeepsie, NY 12601-5400
USA

Accessibility features help a user who has a physical disability, such as restricted mobility or limited vision, to use software products successfully. The major accessibility features in z/OS enable users to:

• Use assistive technologies such as screen readers and screen magnifier software
• Operate specific or equivalent features using only the keyboard
• Customize display attributes such as color, contrast, and font size

Using assistive technologies

Assistive technology products, such as screen readers, function with the user interfaces found in z/OS. Consult the assistive technology documentation for specific information when using such products to access z/OS interfaces.

Keyboard navigation of the user interface

Users can access z/OS user interfaces using TSO/E or ISPF. See z/OS TSO/E Primer, z/OS TSO/E User's Guide, and z/OS ISPF User's Guide Vol I for information about accessing TSO/E and ISPF interfaces. These guides describe how to use TSO/E and ISPF, including the use of keyboard shortcuts or function keys (PF keys). Each guide includes the default settings for the PF keys and explains how to modify their functions.
This information was developed for products and services that are offered in the USA or elsewhere.

IBM may not offer the products, services, or features discussed in this document in other countries. Consult your local IBM representative for information on the products and services currently available in your area. Any reference to an IBM product, program, or service is not intended to state or imply that only that IBM product, program, or service may be used. Any functionally equivalent product, program, or service that does not infringe any IBM intellectual property right may be used instead. However, it is the user’s responsibility to evaluate and verify the operation of any non-IBM product, program, or service.

IBM may have patents or pending patent applications covering subject matter described in this document. The furnishing of this document does not grant you any license to these patents. You can send license inquiries, in writing, to:

IBM Director of Licensing IBM Corporation North Castle Drive, MD-NC119 Armonk, NY 10504-1785 United States of America

For license inquiries regarding double-byte character set (DBCS) information, contact the IBM Intellectual Property Department in your country or send inquiries, in writing, to:

Intellectual Property Licensing Legal and Intellectual Property Law IBM Japan Ltd. 19-21, Nihonbashi-Hakozakicho, Chuo-ku Tokyo 103-8510, Japan

The following paragraph does not apply to the United Kingdom or any other country where such provisions are inconsistent with local law: INTERNATIONAL BUSINESS MACHINES CORPORATION PROVIDES THIS PUBLICATION "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESS OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. Some states do not allow disclaimer of express or implied warranties in certain transactions, therefore, this statement may not apply to you.

This information could include technical inaccuracies or typographical errors. Changes are periodically made to the information herein; these changes will be incorporated in new editions of the publication. IBM may make improvements and/or changes in the product(s) and/or the program(s) described in this publication at any time without notice.

This information could include missing, incorrect, or broken hyperlinks. Hyperlinks are maintained in only the HTML plug-in output for the Knowledge Centers. Use of hyperlinks in other output formats of this information is at your own risk.

Any references in this information to non-IBM websites are provided for convenience only and do not in any manner serve as an endorsement of those websites. The materials at those websites are not part of the materials for this IBM product and use of those websites is at your own risk.

IBM may use or distribute any of the information you supply in any way it believes appropriate without incurring any obligation to you.

Licensees of this program who wish to have information about it for the purpose of enabling: (i) the exchange of information between independently created programs and other programs (including this one) and (ii) the mutual use of the information which has been exchanged, should contact:

IBM Corporation Site Counsel 2455 South Road Poughkeepsie, NY 12601-5400 USA

Such information may be available, subject to appropriate terms and conditions, including in some cases, payment of a fee.

The licensed program described in this document and all licensed material available for it are provided by IBM under terms of the IBM Customer Agreement, IBM International Program License Agreement or any equivalent agreement between us.
Any performance data contained herein was determined in a controlled environment. Therefore, the results obtained in other operating environments may vary significantly. Some measurements may have been made on development-level systems and there is no guarantee that these measurements will be the same on generally available systems. Furthermore, some measurements may have been estimated through extrapolation. Actual results may vary. Users of this document should verify the applicable data for their specific environment.

Information concerning non-IBM products was obtained from the suppliers of those products, their published announcements or other publicly available sources. IBM has not tested those products and cannot confirm the accuracy of performance, compatibility or any other claims related to non-IBM products. Questions on the capabilities of non-IBM products should be addressed to the suppliers of those products.

All statements regarding IBM's future direction or intent are subject to change or withdrawal without notice, and represent goals and objectives only.

This information contains examples of data and reports used in daily business operations. To illustrate them as completely as possible, the examples include the names of individuals, companies, brands, and products. All of these names are fictitious and any similarity to the names and addresses used by an actual business enterprise is entirely coincidental.

COPYRIGHT LICENSE:

This information contains sample application programs in source language, which illustrate programming techniques on various operating platforms. You may copy, modify, and distribute these sample programs in any form without payment to IBM, for the purposes of developing, using, marketing or distributing application programs conforming to the application programming interface for the operating platform for which the sample programs are written. These examples have not been thoroughly tested under all conditions. IBM, therefore, cannot guarantee or imply reliability, serviceability, or function of these programs. The sample programs are provided "AS IS", without warranty of any kind. IBM shall not be liable for any damages arising out of your use of the sample programs.

Terms and conditions for product documentation

Permissions for the use of these publications are granted subject to the following terms and conditions.

Applicability

These terms and conditions are in addition to any terms of use for the IBM website.

Personal use

You may reproduce these publications for your personal, noncommercial use provided that all proprietary notices are preserved. You may not distribute, display or make derivative work of these publications, or any portion thereof, without the express consent of IBM.

Commercial use

You may reproduce, distribute and display these publications solely within your enterprise provided that all proprietary notices are preserved. You may not make derivative works of these publications, or reproduce, distribute or display these publications or any portion thereof outside your enterprise, without the express consent of IBM.

Rights

Except as expressly granted in this permission, no other permissions, licenses or rights are granted, either express or implied, to the publications or any information, data, software or other intellectual property contained therein.
IBM reserves the right to withdraw the permissions granted herein whenever, in its discretion, the use of
the publications is detrimental to its interest or, as determined by IBM, the above instructions are not
being properly followed.

You may not download, export or re-export this information except in full compliance with all applicable
laws and regulations, including all United States export laws and regulations.

IBM MAKES NO GUARANTEE ABOUT THE CONTENT OF THESE PUBLICATIONS. THE PUBLICATIONS ARE
PROVIDED "AS-IS" AND WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED,

IBM Online Privacy Statement

IBM Software products, including software as a service solutions, ("Software Offerings") may use cookies
or other technologies to collect product usage information, to help improve the end user experience, to
tailor interactions with the end user, or for other purposes. In many cases no personally identifiable
information is collected by the Software Offerings. Some of our Software Offerings can help enable you to
collect personally identifiable information. If this Software Offering uses cookies to collect personally
identifiable information, specific information about this offering's use of cookies is set forth below.

Depending upon the configurations deployed, this Software Offering may use session cookies that collect
each user's name, email address, phone number, or other personally identifiable information for purposes
of enhanced user usability and single sign-on configuration. These cookies can be disabled, but disabling
them will also eliminate the functionality they enable.

If the configurations deployed for this Software Offering provide you as customer the ability to collect
personally identifiable information from end users via cookies and other technologies, you should seek
your own legal advice about any laws applicable to such data collection, including any requirements for
notice and consent.

For more information about the use of various technologies, including cookies, for these purposes, see
IBM’s Privacy Policy at ibm.com/privacy and IBM's Online Privacy Statement at ibm.com/privacy/details
in the section entitled “Cookies, Web Beacons and Other Technologies,” and the “IBM Software Products
and Software-as-a-Service Privacy Statement” at ibm.com/software/info/product-privacy.

Policy for unsupported hardware

Various z/OS elements, such as DFSMS, JES2, JES3, and MVS, contain code that supports specific
hardware servers or devices. In some cases, this device-related element support remains in the product
even after the hardware devices pass their announced End of Service date. z/OS may continue to service
element code; however, it will not provide service related to unsupported hardware devices. Software
problems related to these devices will not be accepted for service, and current service activity will cease if
a problem is determined to be associated with out-of-support devices. In such cases, fixes will not be
issued.

Minimum supported hardware

The minimum supported hardware for z/OS releases identified in z/OS announcements can subsequently
change when service for particular servers or devices is withdrawn. Likewise, the levels of other software
products supported on a particular release of z/OS are subject to the service support lifecycle of those
products. Therefore, z/OS and its product publications (for example, panels, samples, messages, and
product documentation) can include references to hardware and software that is no longer supported.

• For information about software support lifecycle, see: IBM Lifecycle Support for z/OS (www.ibm.com/
  software/support/systemsz/lifecycle)
• For information about currently-supported IBM hardware, contact your IBM representative.
Policy for unsupported hardware

Various z/OS elements, such as DFSMS, HCD, JES2, JES3, and MVS, contain code that supports specific hardware servers or devices. In some cases, this device-related element support remains in the product even after the hardware devices pass their announced End of Service date. z/OS may continue to service element code; however, it will not provide service related to unsupported hardware devices. Software problems related to these devices will not be accepted for service, and current service activity will cease if a problem is determined to be associated with out-of-support devices. In such cases, fixes will not be issued.

Trademarks

IBM, the IBM logo, and ibm.com are trademarks or registered trademarks of International Business Machines Corp., registered in many jurisdictions worldwide. Other product and service names might be trademarks of IBM or other companies. A current list of IBM trademarks is available on the web at Copyright and trademark information at www.ibm.com/legal/copytrade.shtml.
This bibliography contains descriptions of the documents in the z/OS Communications Server library. z/OS Communications Server documentation is available online at the z/OS Internet Library web page at http://www.ibm.com/systems/z/os/zos/library/bkserv/.

**z/OS Communications Server library updates**

Updates to documents are also available on RETAIN and in information APARs (info APARs). Go to http://www.software.ibm.com/support to view information APARs.

**z/OS Communications Server information**

z/OS Communications Server product information is grouped by task in the following tables.

### Planning

<table>
<thead>
<tr>
<th>Title</th>
<th>Number</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>z/OS Communications Server: New Function Summary</td>
<td>GC27-3664</td>
<td>This document is intended to help you plan for new IP or SNA functions, whether you are migrating from a previous version or installing z/OS for the first time. It summarizes what is new in the release and identifies the suggested and required modifications needed to use the enhanced functions.</td>
</tr>
<tr>
<td>z/OS Communications Server: IPv6 Network and Application Design Guide</td>
<td>SC27-3663</td>
<td>This document is a high-level introduction to IPv6. It describes concepts of z/OS Communications Server's support of IPv6, coexistence with IPv4, and migration issues.</td>
</tr>
</tbody>
</table>

### Resource definition, configuration, and tuning

<table>
<thead>
<tr>
<th>Title</th>
<th>Number</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>z/OS Communications Server: IP Configuration Guide</td>
<td>SC27-3650</td>
<td>This document describes the major concepts involved in understanding and configuring an IP network. Familiarity with the z/OS operating system, IP protocols, z/OS UNIX System Services, and IBM Time Sharing Option (TSO) is recommended. Use this document with the z/OS Communications Server: IP Configuration Reference.</td>
</tr>
</tbody>
</table>
### Title

<table>
<thead>
<tr>
<th>Title</th>
<th>Number</th>
<th>Description</th>
</tr>
</thead>
</table>
| z/OS Communications Server: IP Configuration Reference | SC27-3651| This document presents information for people who want to administer and maintain IP. Use this document with the z/OS Communications Server: IP Configuration Guide. The information in this document includes:  
  - TCP/IP configuration data sets  
  - Configuration statements  
  - Translation tables  
  - Protocol number and port assignments                  |
| z/OS Communications Server: SNA Network Implementation Guide | SC27-3672| This document presents the major concepts involved in implementing an SNA network. Use this document with the z/OS Communications Server: SNA Resource Definition Reference. |
| z/OS Communications Server: SNA Resource Definition Reference | SC27-3675| This document describes each SNA definition statement, start option, and macroinstruction for user tables. It also describes NCP definition statements that affect SNA. Use this document with the z/OS Communications Server: SNA Network Implementation Guide. |
| z/OS Communications Server: SNA Resource Definition Samples | SC27-3676| This document contains sample definitions to help you implement SNA functions in your networks, and includes sample major node definitions. |
| z/OS Communications Server: IP Network Print Facility | SC27-3658| This document is for systems programmers and network administrators who need to prepare their network to route SNA, JES2, or JES3 printer output to remote printers using TCP/IP Services. |

### Operation

<table>
<thead>
<tr>
<th>Title</th>
<th>Number</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>z/OS Communications Server: IP User's Guide and Commands</td>
<td>SC27-3662</td>
<td>This document describes how to use TCP/IP applications. It contains requests with which a user can log on to a remote host using Telnet, transfer data sets using FTP, send electronic mail, print on remote printers, and authenticate network users.</td>
</tr>
<tr>
<td>z/OS Communications Server: IP System Administrator's Commands</td>
<td>SC27-3661</td>
<td>This document describes the functions and commands helpful in configuring or monitoring your system. It contains system administrator's commands, such as TSO NETSTAT, PING, TRACERTE and their UNIX counterparts. It also includes TSO and MVS commands commonly used during the IP configuration process.</td>
</tr>
<tr>
<td>z/OS Communications Server: SNA Operation</td>
<td>SC27-3673</td>
<td>This document serves as a reference for programmers and operators requiring detailed information about specific operator commands.</td>
</tr>
<tr>
<td>z/OS Communications Server: Quick Reference</td>
<td>SC27-3665</td>
<td>This document contains essential information about SNA and IP commands.</td>
</tr>
</tbody>
</table>

1274  z/OS Communications Server: IP Messages: Volume 1 (EZA)
### Customization

<table>
<thead>
<tr>
<th>Title</th>
<th>Number</th>
<th>Description</th>
</tr>
</thead>
</table>
| z/OS Communications Server: SNA Customization | SC27-3666 | This document enables you to customize SNA, and includes the following information:  
- Communication network management (CNM) routing table  
- Logon-interpret routine requirements  
- Logon manager installation-wide exit routine for the CLU search exit  
- TSO/SNA installation-wide exit routines  
- SNA installation-wide exit routines |

### Writing application programs

<table>
<thead>
<tr>
<th>Title</th>
<th>Number</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>z/OS Communications Server: IP Sockets Application Programming Interface Guide and Reference</td>
<td>SC27-3660</td>
<td>This document describes the syntax and semantics of program source code necessary to write your own application programming interface (API) into TCP/IP. You can use this interface as the communication base for writing your own client or server application. You can also use this document to adapt your existing applications to communicate with each other using sockets over TCP/IP.</td>
</tr>
<tr>
<td>z/OS Communications Server: IP CICS Sockets Guide</td>
<td>SC27-3649</td>
<td>This document is for programmers who want to set up, write application programs for, and diagnose problems with the socket interface for CICS® using z/OS TCP/IP.</td>
</tr>
<tr>
<td>z/OS Communications Server: IP IMS Sockets Guide</td>
<td>SC27-3653</td>
<td>This document is for programmers who want application programs that use the IMS TCP/IP application development services provided by the TCP/IP Services of IBM.</td>
</tr>
<tr>
<td>z/OS Communications Server: IP Programmer's Guide and Reference</td>
<td>SC27-3659</td>
<td>This document describes the syntax and semantics of a set of high-level application functions that you can use to program your own applications in a TCP/IP environment. These functions provide support for application facilities, such as user authentication, distributed databases, distributed processing, network management, and device sharing. Familiarity with the z/OS operating system, TCP/IP protocols, and IBM Time Sharing Option (TSO) is recommended.</td>
</tr>
<tr>
<td>z/OS Communications Server: SNA Programming</td>
<td>SC27-3674</td>
<td>This document describes how to use SNA macroinstructions to send data to and receive data from (1) a terminal in either the same or a different domain, or (2) another application program in either the same or a different domain.</td>
</tr>
<tr>
<td>z/OS Communications Server: SNA Programmer's LU 6.2 Guide</td>
<td>SC27-3669</td>
<td>This document describes how to use the SNA LU 6.2 application programming interface for host application programs. This document applies to programs that use only LU 6.2 sessions or that use LU 6.2 sessions along with other session types. (Only LU 6.2 sessions are covered in this document.)</td>

### z/OS Communications Server: IP Diagnosis Guide

<table>
<thead>
<tr>
<th>Title</th>
<th>Number</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>z/OS Communications Server: IP Diagnosis Guide</td>
<td>GC27-3652</td>
<td>This document explains how to diagnose TCP/IP problems and how to determine whether a specific problem is in the TCP/IP product code. It explains how to gather information for and describe problems to the IBM Software Support Center.</td>
</tr>
</tbody>
</table>

### z/OS Communications Server: ACF/TAP Trace Analysis Handbook

<table>
<thead>
<tr>
<th>Title</th>
<th>Number</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>z/OS Communications Server: ACF/TAP Trace Analysis Handbook</td>
<td>GC27-3645</td>
<td>This document explains how to gather the trace data that is collected and stored in the host processor. It also explains how to use the Advanced Communications Function/Trace Analysis Program (ACF/TAP) service aid to produce reports for analyzing the trace data information.</td>
</tr>
</tbody>
</table>

### z/OS Communications Server: SNA Diagnosis Vol 1, Techniques and Procedures and z/OS Communications Server: SNA Diagnosis Vol 2, FFST Dumps and the VIT

<table>
<thead>
<tr>
<th>Title</th>
<th>Number</th>
